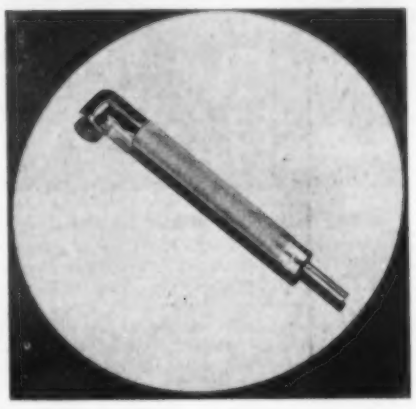
ANGLE TYPE DRILL



Built especially for drilling in difficult-to-reach, relatively inaccessible spots, this Aerocraft Junior aircraft drill is designed to operate at high speeds. It will remain cool, even after prolonged operation. This tool will reach into places which could not be drilled with conventional type units.

Overall length is 5¾ inches. Nose spindle is fitted with 10-32 thread and is available only in 90-degree model. Device is applicable for use in aircraft assembly operations, as well as for general industrial use. Made by **Aircraft Tools, Inc.**, Dept. NED, 750 E. Gage St., Los Angeles, Calif.

▲ Mention Item **NED-4364** when writing ▲

METAL SPRAY UNIT

For applying protective coatings or for reproducing likeness, this self-contained portable metal atomizer is capable of spraying any neutral alloy which has melting temperature of up to 600 degrees Fahr. Equipment is recommended for use in making templates, spotting or checking dies, and reproducing molds. It is especially suitable where accuracy of reproduction is so fine that even pin scratches must be reproduced. Device is foolproof in operation. It requires only connecting with electric power and factory air pressure line for operation.

Heating contents of unit up to melting point requires approximately 12 minutes after cord has been plugged in. Actual spraying is accomplished by merely pressing trigger on handle of gun. Control knob immediately above handle regulates flow of metal through nozzle. Unit can be operated by un-skilled operator and no protective clothing is needed.

Unit is offered complete with gun, electrical heating units, insulated melting pot, control handle and nozzle. In addition, 15 feet of air hose to connect to gun and 9 feet of cord with plug in are supplied. Made by **Alloy-Sprayer Co.**, 2050 Book Bldg., Detroit, Mich.

RUBBER-LIKE PLASTIC

Developed to replace rubber and adaptable for electrical tape, friction tape, raincoats, garden hose, wire insulation, golf balls and footwear, this ethyl cellulose plastic is said to be made of materials which are available in sufficient quantities for large-scale production. Raw materials required for manufacture of product are cotton linters or wood pulp, caustic soda, chlorine and alcohol from natural gas or from fermentation of agricultural products.

Some formulations have good abrasion resistance and tensile strength sufficient for many applications. Water resistance comparable to that of compounded rubbers can be built into these soft-type plastics. Strong soap compositions will not harm product. Some formulas are not affected by motor oils and butter, indicating it may possibly be used for containers of food products. It has resistance to ozone, a point of interest to electrical industry. Developed by **Hercules Powder Co.**, Wilmington, Delaware.

How To Sell War Bonds!

CAREFUL planning and promotion, as well as full cooperation on the part of management and labor are essential factors for any industrial War Bond drive. How such a program can be carried to successful completion is exemplified by the intensive one-week campaign staged by The Cleveland Tractor Co. of Cleveland. As a result of the full cooperation by all employes, the coveted Treasury Department "Minute Man" flag now flies over this plant.

When the War Bond committee was originally formed as a part of the War Production Drive, 33 per cent of the employes were already signed up under the Payroll Savings Plan. The committee worked for several weeks and raised the number participating to 74 per cent. It was then decided to conduct an intensive one-week drive to "put over" the War Bond campaign in this large industrial plant.

(*Continued on Page 2*)

Top Left—Treasury Department "Minute Man" flag flies from staff at The Cleveland Tractor Co. plant. Lower Left—Employes listening to speaker at War Savings Plan rally prior to opening of drive. Above—Lining up for Parade. Leading tractor was donated by workers to Gen. MacArthur through efforts of War Production Drive Committee. Right—Large thermometer indicates progress of War Bond sales during course of campaign. Workers entering plant watched upward climb of column throughout drive. Below — Cooperating with the Cleveland War Bond Drive parade, this model MG1 Cletrac promoted bond sales.

with PLASTIC ROCK!

Trowel a smooth, tough, plastic surfacing right over your old concrete or wood floor.

Plastic Rock comes complete, packed in barrels. Nothing more to buy. No application "formula" to confuse you. Simply mix and trowel right over old floor. Average depth one-half inch. Old floor Saturday is a new floor Monday. Also patches concrete to a perfect feather edge. Plastic Rock is absolutely spark-proof, skid-safe wet or dry, dustless, silent. Feels like cork under foot. Cannot splinter, crack, crumble, curl or loosen. Heavy loads in steel wheels actually improve it. Five-year old floors show no wear. Natural color is dark gray. Also furnished in red, green and brown. Used by U. S. Army, Navy and largest industries in America. Your contractor or your own crew can apply.

How to Sell War Bonds!

(*Continued from Page* 1)

Fifty men were chosen as captains, representing all departments and all shifts. These men worked directly under the supervision of the Labor-Management committee. Prepared lists were made of all employes by departments. Each captain was given an envelope containing application blanks, with name, number and shift of each man or woman he was to contact. He was also provided with cards of certification for those who signed up, as well as buttons to distribute to them. Ample promotional literature was available for distribution, so that the employes could discuss the drive with their families.

Three days prior to official opening of the drive, large posters containing only a question mark were posted on all departmental bulletin boards. The next day, these were replaced with a large question mark and words, "Plus 5" in poster form. On the following day the posters carried a question mark and the figures "95 per cent." This set the goal for the week's drive, which was then officially announced.

Printed bulletins, explaining that the goal of the drive was to have over 95 per cent of the employes subscribing 10 per cent or more of their wages for the purchase of War Bonds, were handed employes as they enter plant on the first day of drive. A record of "Any Bonds Today", played over the plant's public address system, greeted workers at beginning of each shift.

Different posters depicting the full significance of War Bonds appeared on bulletin boards each day. These posters were created by employes. Also posted was graphic chart showing each department's progress in the campaign. Percentages were changed each day, showing increase of various departments. This method of stimulating competition was found to be the most effective promotion used.

At the end of the drive, 95.5 per cent of all employes had pledged 10 per cent or more of their earnings toward the purchase of War Bonds, under the Payroll Savings plan. Applications continue to come in. Arrangements have been made to contact every new employe as he is hired, so that the percentage of participation will remain as high or higher than it is at present.

With appropriate ceremonies, the Treasury Department "Minute Man" flag was awarded to the employes. The flag flies from the plant flag pole, directly below the American flag.

This is only one of thousands of similar drives in war plants, commercial establishments and industries throughout the United States. Full cooperation is offered any firm by the Treasury Department in planning organizing and conducting a War Bond Payroll Savings Plan Drive. Write to **Treasury Department**, Section D, 709 Twelfth St., N. W., Washington, D. C.

NOW MULTI-WALLED PARTS DE-BURRED IN 1 DOUBLE-QUICK OPERATION

With the cutting blade in extended position, as shown, the burr around any hole may be quickly removed. Sliding the knurled collar upwards retracts the blade to within the diameter of the shaft and the work may be removed or moved to a new position and the blade re-extended.

NEW NOBUR BURR-REMOVING TOOL QUICKLY AND EASILY REMOVES BURRS FROM HOLES ON MULTI-WALLED PARTS!

NOBUR eliminates slow, costly hand methods of burring...used on any machine tool, lathe, drill press, portable electric drill or at end of a flexible shaft. Minimizes costly 'rejects' ...enables operator to do more in less time ...increases production, lowers production costs. No skilled help necessary...easy to operate...green 'trainees' and women operators do burring with speed and accuracy...smooth, clean cutting action of the NOBUR will pass the most critical inspection. Important parts are hardened and ground. Shaft is finished to a diameter slightly under its basic size...double-edged cutting blade is of special tool steel, cuts freely in either alloy steels or soft metals. Tool is simple in construction—rugged. For complete information—*write*..

SPEEDS PRODUCTION! CUTS TIME AND COSTS!

SPEEDY AIR VISE

FAST! POWERFUL! FOOT CONTROLLED!

$24
Complete with Foot Control Valve, Air Hose and Fittings

HAND FREE OPERATION!
• Foot operation leaves BOTH hands free for fast insertion and removal of work. Vise stays open or closed without constant foot pressure.

Most important vise design in years! A fast-action, hard gripping air vise that speeds production; saves time, labor and costs! Speedy Air Vise operates from air line or individual compressor, exerting a grip of 15 times air pressure! Jaw opening adjustable up to a maximum of 3 inches. Maximum travel of ½ inch assures rapid insertion and removal of work. Employs no piston, but instead a long-life, multiple-type diaphragm . . . eliminating friction loss, air leakage and slippage. Rugged, compact, low priced, it is the ideal vise for speeding up numerous operations.

CONVERSION + + +

(*Continued from Page 2*)

output of Union Steel Products Co. in midwestern city. This conversion was principally one of design, as materials used and machines employed for producing war goods are very similar to those used in turning out peacetime products.

Shown on opposite page are typical products now being made, as well as wire racks and stands which were part of extensive line prior to entry of this plant into war work. Baskets, made of preformed wire which is spot welded into finished form, include handling baskets for shot, caps, shells, cases, fuses, bombs and similar containers for transporting parts

Top—Multiple welder speeds production. Top Center—Critical labor problem is met by using women operators on spot welders, releasing men for heavier work. Lower Center—Battery of small presses in wire fabricating department. Bottom—Paint baking ovens processing display racks. This equipment is now used for finishing ammunition handling and processing baskets

through manufacturing operations, cleaning, plating or other processing which may be required.

Production facilities which are now devoted almost entirely to making equipment to be used by industries engaged in war work include wire bending and shaping equipment; electric spot, arc and gas welding; and finishing facilities for hot dip galvanizing, plating, tinning, enameling and painting. Workers, long skilled at forming wire products, are now turning out similar equipment which is fully adapted to the war effort. Women are used to operate spot welding equipment, releasing men to handle heavier manufacturing operations and more difficult work.

The design department develops baskets for handling ammunition parts. Intricate shapes are readily formed and fabricated which will speed up production handling and will protect precision munition parts.

For further details on how your plant may be converted to war work, contact the nearest regional office of the War Production Board, or write to the **Conversion Unit,** Contract Distribution Branch, Production Division, War Production Board, 462 Indiana Ave., Washington, D. C.

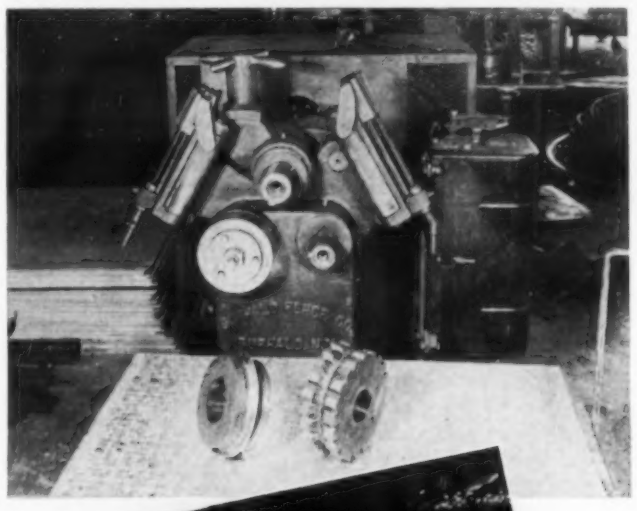
CONVERSION + + +

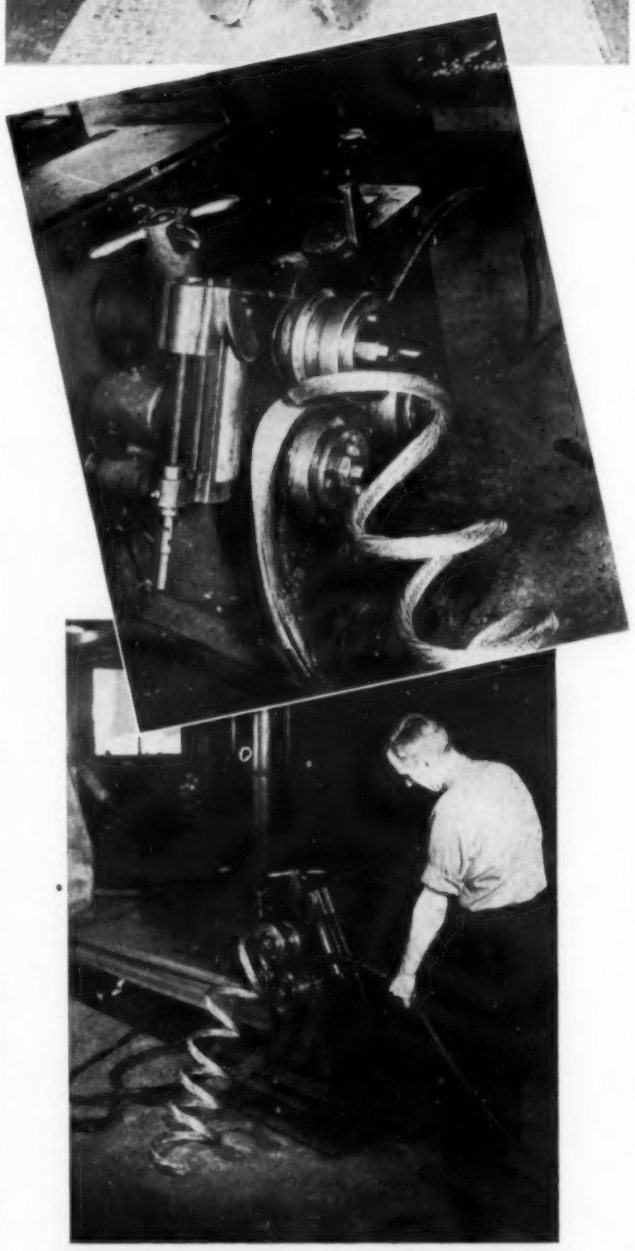
BENDING ROLL to CABLE SALVAGE

.... Machine Reclaims Rubber From Cable

CONVERSION of a single machine facilitated the salvage of large quantities of scrap rubber cable, saving both copper and rubber insulation. Former method was to burn rubber and cloth insulation off of cables.

Standard Buffalo bending roll machine at plant of The Timken Roller Bearing Co. was fitted with special wheels for this work. Lower wheel was replaced with notched gripper wheel.





Top—Buffalo bending roll machine with one lower wheel and the upper pressure wheel removed. Rubber salvage replacement wheels are shown in foreground. Center—Cable entering machine at right and stripped cable and rubber covering emerging at left. Bottom—Operator feeding scrap cable into rubber salvaging machine

Sharp center-flanged wheel replaced one upper wheel. This combination proved effective in removing insulation, cloth dropping away from rubber. Both rubber and copper are in saleable condition.

Salvaging operation is accomplished at rate of about 6 feet per minute. Cables ranging from ⅝ to 2-inch diameters are handled. Machine is converted for salvaging operation in about three minutes.

SAFE WIRE ROPE CLAMP

Complete safety, assured clamping and rapid installation are characteristics of the "Safe-Line" wire rope clamp finding wide favor in hundreds of industrial and utility plants.

This is the only clamp on the market that handles a wire loop and has approval of the Underwriters' Laboratories. Its installation requires absolutely no serving or splicing of the cable and completely eliminates personal injury to workmen.

The "Safe-Line" wire rope clamp is composed of a split, threaded collar fitting over and firmly engaging the strands of the wire rope, on each end of which is screwed a threaded streamlined lock nut. The clamp is entirely free of projecting parts and permits no frayed or sharp rope ends to be exposed.

No special tools are required to properly install "Safe-Line" wire rope clamps.

May we send you complete information and price list of the "Safe-Line" wire rope clamps in rope sizes from ⅛ inch to ¾ inch? **National Production Co.**, 2561-2603 St. Jean Ave., Detroit, Mich. —Advt.

PRACTICAL DATA
FOR
PRESENT PROBLEMS

Here are two books designed to help users of Molybdenum steels and irons to conserve all alloying elements, and possibly steel and iron, by getting the most in the way of strength, toughness and wear resistance with the lowest alloy content.

"MOLYBDENUM IN STEEL" covers the fundamental metallurgy of Molybdenum steels. Heat treatment – physical properties – applications – of a number of these steels are treated at length.

"MOLYBDENUM IN CAST IRON" covers the effect of Molybdenum in gray iron, giving suggested analyses for practical applications and detailed discussion of high strength (60,000 p.s.i. and up) irons.

Both books will gladly be sent without charge on request.

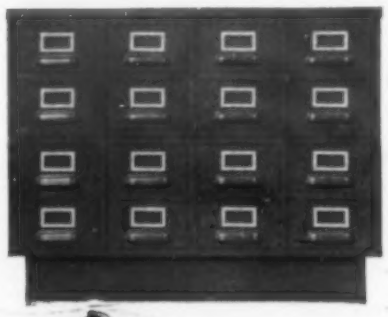
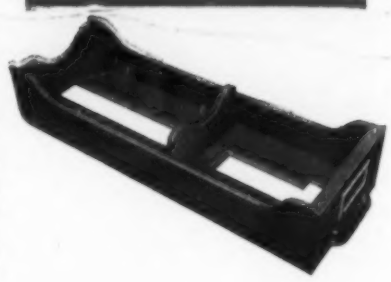
Made of selected hardwood and designed to give satisfactory service, these Perma-Bilt tabulating card files are made to handle business machine and other cards in sizes of 3 x 5, 6 x 4, 8 x 5 and 9 x 6.



Units are made in sections of 8 drawers. Each section has capacity of 26,400 cards.

Added feature is Sta-Tite compressor which is only ⅜-inch thick and is positive in operation. It will hold cards in place even if file drawer is turned upside down.



These units have been designed to replace metal card files which are no longer made. Manufacturer can supply Tab-Trans files for non-current records. Where standard files can not be used satisfactorily, special files will be developed to meet any given requirements. Made by **The Planned Business Equipment Co.**, 1422 Euclid Ave., Dept. NED, Cleveland, O.

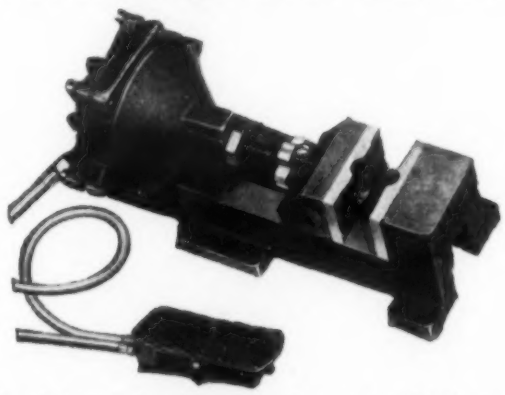
PNEUMATIC VISE

Designed to speed up production and cut time, labor and cost in war plants, assembly lines and machine shops, this Speedy air vise is equipped with foot control. This leaves



both hands free to handle work. As many as 1200 operations per hour are said to have been made in vise.

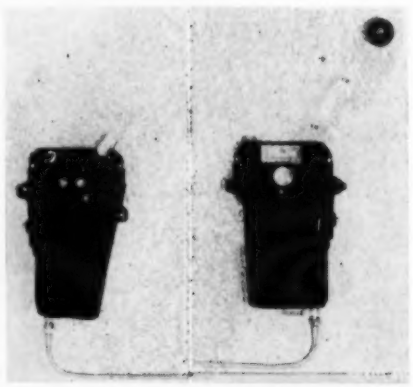
Unit is operated by multiple type diaphragm instead of piston. Movable jaw has maximum travel of ½ inch, gripping with force of 15 times air line pressure. Adjustment screw enables operator to set movable jaw anywhere up to its maximum opening of 3 inches.

Vise can be attached to air line or individual compressor and can be used on pressures up to 150 pounds per square inch. It can be used on drill presses, milling machines, shapers and by assemblers. Unit is furnished complete with air hose, foot controls and fittings, ready for immediate use. Made by **W. R. Brown Corp.**, Dept. D-11, 5720 Armitage Ave., Chicago, Ill.

▲ Mention Item **NED-4396** when writing ▲

HYDRAULIC CONTROL

Delivering whatever motion that is imparted to transmitter handle to receiver lever, this Exactor hydraulic control has no lost motion. Only connection required between two units is single tube which can be bent to avoid intervening objects, or run through



bulkheads with ease and safety. Device operates upon fluid displacement principle. Motion of handle on transmitter forces definite quantity of liquid to receiver. This liquid forces receiver piston upward, causing lever to move through equal arc.

Trunk type pistons are used and special packing glands prevent fluid leakage. Single interconnecting tube is filled with liquid which has low freezing point. One suction stroke on control will deliver 100 inch-pounds of torque. On pressure stroke, control delivers two to three times this amount.

Applications include use for throttle, mixture, supercharger, landing lamp, air screw or valve control in aircraft. It is also applicable for control and operating functions on marine, railroad and industrial equipment. Unit is accurate to fraction of degree, will not vibrate from set position and requires only single ¼-inch tubing. Made by **Sperry Products, Inc.**, 1505 Willow Ave., Hoboken, N. J.

Carpenter
WELDED STAINLESS TUBING

SPEEDS THE PRODUCTION OF Synthetic Rubber, High Octane Gasoline, "Gunpowder" and Chemicals that are vital to our war effort. If you would like to know more about how this corrosion-resistant tubing can help to speed processing and eliminate many maintenance headaches, ask for a copy of Carpenter's Welded Stainless Tubing Data Book.

FABRICATORS also use this tubing to boost the output of mechanical and structural parts. Often, flanging, tapering, expanding, etc. is sufficient to produce the finished part. Uniform wall thickness permits using lighter gauges for strength and rigidity. For complete data on shapes and grades available to meet Army and Navy "specs" — write on your company letterhead for a copy of this Data Book.

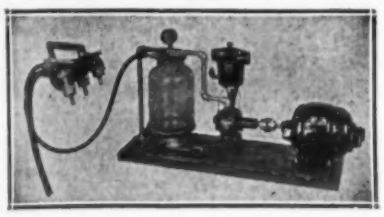
CONVERTING from TIN to GLASS?



We Have The FILLER for You!

★

This small, portable bench unit shown here handling from vials to gallons is very useful for full production in medium sized plants or odd lot production in larger plants. Requires no overhead tanks. Fills directly from barrel or drum. Suitable for bench or tray work and will also fill containers in original cartons.

★

Larger units likewise available in several types. The line includes a FULLY AUTOMATIC ROTATING GRAVITY VACUUM FILLER which handles from gallons down to smallest containers. For fast production on automatic lines this is the machine to use. The GRAVITY VACUUM SYSTEM is ideal for foamy products packaged in glass or tin. Fills heavy slow flowing products at a fast rate.

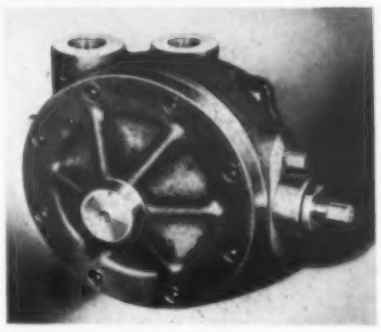
VARIABLE PUMP



Equipped with mounting considered as standard by most pump manufacturers, this vane-type variable delivery pump may be used as replacement unit or as original equipment without changing current designs. Delivery of unit is variable from 0 to 4 gallons per minute and operating pressure is 1000 pounds per square inch. Top of 3500 pounds per square inch for short-intervals is possible.

Additional feature is balance of individual vanes. Being bevelled on two edges as well as on outer stator side, design results in marked reduction of wear, elimination of overheating and increase of operating efficiency.

To permit maximum selection of adjustment, split stator instead of conventional solid ring is employed. Adjustment and limit screws on outside of housing allow for varying delivery to any amount required within operating range. Made by **Hydra-Motive, Inc.**, 221 St. Aubin Ave., Detroit, Mich.

▲ Mention Item **NED-4404** when writing ▲

CONVECTOR CABINETS

To be used in place of all-metallic convectors and radiators, this non-metallic cabinet convector is constructed entirely of materials not listed as critical. Except for screws, non-metallic materials are used throughout. Side and top panels are fabricated from rigid fibre board. Supporting members provided at corners are of hard wood.

Element of this unit is constructed of steel fins and tubes. This small amount of metal used is said to be equivalent to 1/5 of that used in ordinary radiator.

Two cabinet types are available. One type is provided for wall suspension and other type is of free standing floor design. Circular designed grilles are punched in sloping tops of both cabinets. Made by **The Trane Co.**, 2018 Cameron Ave., La Crosse, Wis.

▲ Mention Item **NED-4405** when writing ▲

STAPLING HAMMER

For work in building field, applications of this H-3 stapling hammer include fastening asphalt shingles or standard plywood roofing, asphalt side walls, heavy insulation, built-up roofs, soundproofing material, metal laths, wire mesh and plaster board. Staple can be driven with single one-hand blow, freeing operator's hand, adding inches to normal reach and eliminating necessity of holding tacks or nails in mouth or pocket. This light weight hammer requires no more equipment than is indicated in illustration.

Since hammer frame is made of metals listed as critical, it is limited to war production work in building field. Made by **Bostitch Inc.**, 41 Division St., East Greenwich, R. I.

▲ Mention Item **NED-4406** when writing ▲

BLACKBOARD

Equipped with writing surfaces on both sides, this blackboard is suggested for use in training classes for inspectors, machine operators, foremen and for posting production figures. Unit is said to be accepted as standard for New York City Board of Education.

This double-faced unit is shipped knocked down and is easily assembled. It is available in 10 sizes ranging from 2 by 3 feet to 4 by 6 feet. Writing surface can be furnished in natural slate or in Nucite glass and in green, black or ivory. Made by **New York Silicate Book Slate Co.**, 421 Seventh Ave. New York City.

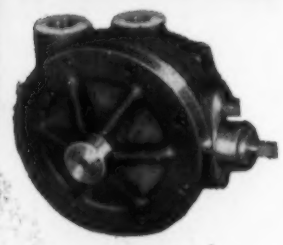
SHOCK-PROOF PUMP
features
Variable Delivery
and
"Standard" Mounting



● Infinitely variable delivery ranging from 0 to 4 gpm., at operating pressures up to 1,000 lbs. psi., and a type of mounting considered as "standard" by most manufacturers of hydraulic pumps are features of the HYDRA-MOTIVE vane-type hydraulic pump.

Designed especially for low volume—high pressure performance, the pump is virtually shock-proof. It will operate up to 3,500 lbs., psi. for short intervals and is completely balanced. Vanes of unique and patented design permit additional balancing for elimination of overheating, and for automatic compensation for wear. The "standard" mounting, together with reasonably prompt shipments, permit the immediate adoption of the pump for either new equipment or as replacement for existing pumps. Drive shaft of $1\frac{1}{16}$ inch diameter extends $1\frac{5}{16}$ inches beyond housing. Rotation: Either rotation is available. Housing is of specially cast bronze. Rotor, stator, vanes etc., are of hardened and ground steel. Oil line connections are for standard SAE fittings. Adjustment for variation in delivery is by means of screw on outside of the housing.

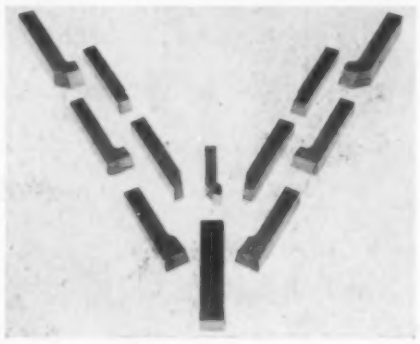
TOOL SHANKS



Cast to shape from high tensile strength Meehanite, these Victory tool shanks have rake and clearance angles included on them for quick and economical tipping with carbide. Tools are of special value for those shops equipped to affix their own tool tips.

Meehanite alloy of which shanks are made, uses no minerals which are on strategic list. This alloy does not load grinding wheel as rapidly as steel, and it is said to have twice the vibration damping capacity of steel. Heat conductivity is rapid, thus assuring cooler tips and longer wear. Made by **The Copper-Bessemer Corp.**, Mt. Vernon, O.

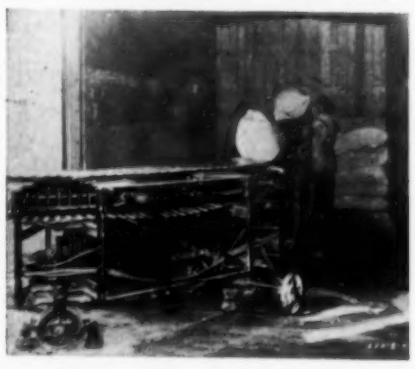
CAR LOADING CONVEYOR



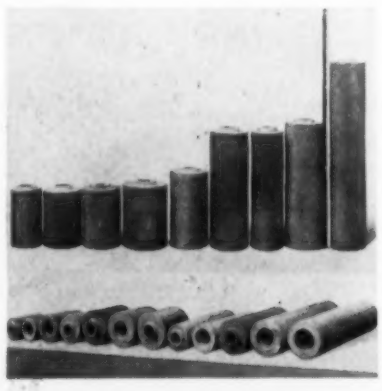
Equipped to handle bags, boxes, cartons, cases and packages of all types, this V-3 Loader - Unloader is self-powered. Conveyor belt is comprised of overlapping metal slats that curve horizontally as well as vertically.

This 25-foot long unit is so designed that delivery end for loading cars can be elevated to cope with rising stacks in car. Frame is hinged and sectional. Operator can control movements of unit either in or out of car as loading or unloading progresses.

Ten 100-pound bags can be handled per minute with one man operating. Loading begins moment loader passes over gangplank as it takes bags with it from chute into end of car. At end of car, conveyor is started and continues in operation until car is filled. Made by **Manierre Engineering & Machinery Co.**, 759 N. Milwaukee St., Milwaukee, Wis.

▲ Mention Item **NED-4415** when writing ▲

LADLE SLEEVES



Designed for use with hot metal ladles, these Natco sleeves are available in lengths as long as practicable. Units are used in making up of stopper rod assemblies in steel mill or foundry. Use of these longer length sleeve brick reduces probability of rod joint failure by an estimated 50 to 70 per cent.

Formation of air pockets in clay during mining is eliminated by deairing process. This produces material of uniform density, free from laminations such as those found in materials formed by pressing process. Samples will be sent by manufacturer. Made by **National Fireproofing Corp.**, 202 E. Ohio St. N. S., Pittsburgh, Pa.

FOREDOM FLEXIBLE SHAFT MACHINES Solve Many Production and Maintenance Problems

Model illustrated is FOREDOM No. 340. Comes with either foot or hand-operated rheostat at $45.70. (Available with suspension-type motor, No. 240 at $43.20, including foot rheostat). Other models as low as $23.50.

In the making of an intricate die or mold . . . in the de-burring, finishing, cleaning, polishing, etc. of small irregularly-shaped parts, or in the removing of high spots on gears (WITHOUT an expensive DISASSEMBLY and RE-SET) . . . . in any one of many similar tasks—you can rely on a FOREDOM to do a better and quicker job.

These features combine to make FOREDOM MACHINES the most versatile of war plant aids: 1) Four types of interchangeable handpieces, including sizes as small as a pencil; 2) A choice of suspension or bench type; 3) A wide range of accessories. For close corner work FOREDOMS have no equal.

SERVING AT VITAL SPOTS IN LEADING WAR PLANTS

Many production men are spotting these general utility FOREDOMS at convenient points about their plants, particularly at EACH POINT OF FINAL ASSEMBLY OF SMALL PARTS. FOREDOM MACHINES are used on metal, plastics, glass, wood, porcelain, etc. Ideal for identification-marking of products and tools. Less fatiguing to women operators. Hundreds of war plants are eliminating time-taking hand jobs with FOREDOMS. These include: Ford, General Motors, Bendix, Westinghouse, Warner, Allis-Chalmers, Remington Arms, Curtiss-Wright.

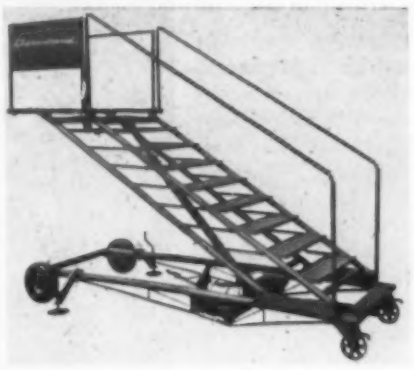
ELEVATING PLATFORM



Adaptable for servicing operations on aircraft, assembly in industrial plants and other work requiring adjustable elevating platform, this Aerostand is hydraulically operated. Height range is from 3 to 10 feet above floor or ground. Stabilizing braces resting on large steel pads permit solid footing on soft or uneven surfaces and assures equalization of working platform.

Guard rails are removable to form overhanging extension. Platform is raised or lowered easily by hydraulic cylinder and is equipped with mechanical safety pin for maintaining desired level. Base measures 4 by 11 feet, assuring stability even when platform is fully raised.

Unit is equipped with swivel casters and pneumatic tired wheels. In addition to mobility around plant, it can be towed by any car or truck through use of telescopic tow bar. Made by **Pacific Engineering Corp.**, 3123 San Fernando Rd., Los Angeles, Calif.

▲ Mention Item NED-4424 when writing ▲

FINGER PROTECTORS

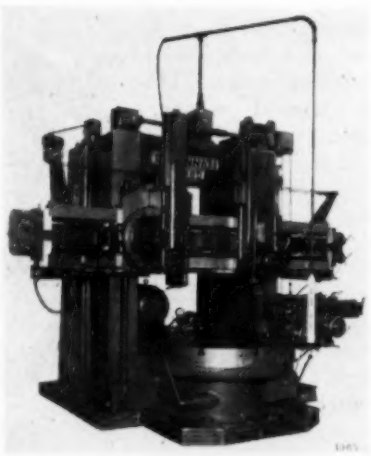
Replacing makeshift devices, these three chrome leather finger cots afford dependable protection for operators who must handle small, rough objects or hot articles which are

not large in size. Short type No. 1000, at left, is recommended for operations in which only one or two fingers need to be protected, or where there is only intermittent finger hazard.

Tie-on No. 1001 type, center, is exceptionally large and can be used as protection for finger or thumb that is bandaged. Tie-on feature makes it applicable for wider variety of uses. No. 1688, at right, is two finger and thumb protector. It is intended for use on operations where several movements require finger protection, while succeeding movements require accuracy and sense of touch of bare hand. Made by **American Optical Co.**, 1492 Mechanic St., Southbridge, Mass.

▲ Mention Item NED-4425 when writing ▲

VERTICAL BORING MILLS



Available in 54 and 64-inch models, these Hypro vertical boring and turning mills incorporate features formerly included only on larger and more expensive machines. Table has extra depth and is mounted on anti-friction bearings supported by flat track. Rapid traverse is provided for each head. Bed and speed box is of one-piece construction.

Table gear has wide face. Transmission gears are of heat treated alloy steel and all shafts are fitted with bearings. Pyramid type housings have long base and broad face. Fine adjustment is provided through use of ratchet handles on cross and down feeds. Meehanite iron rams are equipped with forged steel tool holders. Square turret tool holder on side head is of 12-position type. Feed box is bolted to each end of box form cross rail.

Feed box contains feed, rapid traverse and reversing mechanism. Graduated scales are provided on cross rail and on all rams. Main drive, table and spindle are lubricated automatically. Power for raising or lowering rail is transmitted from separate constant speed motor mounted on box arch and controlled by push button pendant control.

Elevating mechanism of rail has limit switch which stops drive when rail reaches its maximum height. Turret head can be added to rail. Thread cutting attachments are available for any or all heads. Made by **The Cincinnati Planer Co.**, 3122 Forrer St., Cincinnati, O.

4 FEATURES OF L & N OPTICAL PYROMETER

At least four specific features make it easy to use the L&N Optical Pyrometer:

1. It reads directly in degrees. No more conversion tables; no more "thinking" in milliamperes while you work in degrees.
2. It's a third lighter than the older L&N Optical.
3. It's faster—far faster for a novice; noticeably faster for a veteran user.
4. It's even more accurate than the older L&N Optical—which was the standard of accuracy among opticals. And it's a potentiometer—the modern standard for accurate measurement of high temperatures.

The L&N Optical Pyrometer is described in Catalog N-33D, which will be sent on request.

PORTABLE SERVICE LIGHT

Adjustable from 30 inches to 7 feet, this portable fluorescent service light was designed to project light into many inaccessible places. This unit has adaptability for servicing planes at night and for industrial plant use as well.

Upward or downward, horizontally or vertically, or in any angle of 180 degree arc, thus unit is adjustable without use of tools and will illuminate any darkened area with long source of cool fluorescent light that permits close working arrangements and eliminates shadows. Well balanced cast iron base makes light pracitically impossible to upset.

Other features include power factor correction for two 48-inch 40-watt fluorescent lamps, baked enamel reflector, and if desired, screen will be supplied at extra cost to protect lamps. Made by **Lumidor Mfg. Co.**, Los Angeles, Calif.

▲ Mention Item **NED-4432** when writing ▲

TOOL HOLDER

Reducing tool changing time to approximately 5 seconds, this tool holder consists of tool post which can be fitted on any engine lathe carriage compound rest. Detachable tool heads fit into cylindrical member which is clamped into tool post.

Standard high speed tool bits used for boring, turning, threading, facing or forming are fastened into heads and each bit remains in place in head. Drills and reamers can also be used.

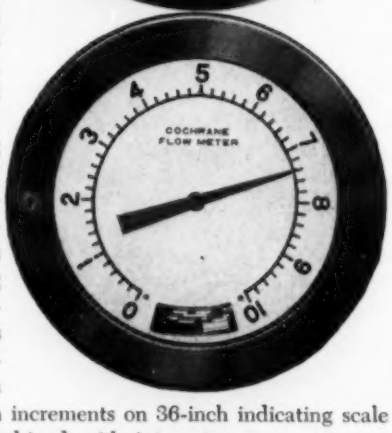
If particular tool must be removed and then reinserted in tool holder, as for example when particular working operation is interrupted by other work, holder permits original tool to be reinserted in tool holder in exactly same position it originally occupied.

In actual practice, holder is said to make possible a reduction of 35 per cent in machining time on many operations. Four sizes fit all standard makes of engine lathes from 10 to 24 inches. Made by **Lane-Wells Co.**, 5612 Soto Street, Los Angeles, Calif.

▲ Mention Item **NED-4433** when writing ▲

GAS FLOW METER

Accuracy, freedom from maintenance and complete safety are claimed for this high pressure flow meter that features adaptation of ring balance. It has no float, stuffing box or pressure-tight bearing. Unit is entirely closed and ring balance has no internal working parts.



Mercury sealed manometer is stainless steel ring 15 inches in diameter. Ring is balanced on knife edges at its geometric center. Partition at top of ring is formed of solid stainless block. Nickel tubing connects top of ring to center of rotation where it joins free ends of twin 6-inch nickel torsion tubes.

By this design, ring tilts 10 degrees for full differential range measurement which may be between 4 and 9 inches of mercury depending on cam weight supplied. Cam extracts square root relationship so as to express flow directly in uniform increments on 36-inch indicating scale which may also be combined with integrator.

These meters are tested under 7500 pounds per square inch and are said to be successful for measuring of nitrogen, hydrogen and ammonia gases at pressures of approximately 5000 pounds per square inch. Made by **Cochrane Corp.**, 3143 N. 17th St., Philadelphia, Pa.

▲ Mention Item **NED-4434** when writing ▲

Simple, Sturdy
CJB AHLBERG
Ball Bearing
PILLOW BLOCKS

1. Precision self-aligning ball bearing.
2. One-piece sturdy housing.
3. Removable end cap.
4. No drag labyrinth seals.
5. Simple mounting wrench.

THESE CJB pillow blocks are not a new development, but a proven design, with a ten year service background.

Their compactness and simplicity make them ideal for light and normal service, where a reliable inexpensive bearing is required.

The full self-aligning, precision type ball bearing, is mounted in a one piece, Parkerized, housing. Seals, to protect the bearing and retain lubricant, are non-wearing Neoprene rings, which turn with the shaft and float in the housing.

This labyrinth type of seal is frictionless, long-wearing, and exceptionally effective.

AHLBERG BEARING COMPANY

BALANCED LIGHTING *for* BETTER SEEING ON THE JOB

Keeps Worker's EFFICIENCY HIGH

Quick, accurate, comfortable "seeing" is your workmen's most vital tool. On the efficiency of their eyes depends the speed and quality of their production. For maximum eye efficiency the worker needs Balanced Lighting—Localites for high intensity illumination directed on his job — Generalites for horizontal illumination of the working area background. As in the shell case machining operation pictured above, and for thousands of machine, assembly and inspection jobs. Fostoria Balanced Lighting is speeding war production—giving workmen the high "seeing" efficiency so vital to do their jobs with greater quickness, accuracy and minimum fatigue.

PRODUCTION-Quicker

INFRA-RED PROCESS for BETTER BAKING AND DRYING

INDUSTRIAL fostoria SERVICE

Keeps Production MOVING FASTER

Minutes instead of hours for the drying of paint on airplane engines. As pictured above, one spray coat and two spray finish coats are now baked at once in only 5 minutes.

Today, many operations of baking, drying, dehydrating and preheating are being greatly speeded and improved by the amazing Infra-Red Process. Quickly available Fostoria Para-Sphere equipment provides the approved means to utilize this modern method for war production. And Fostoria Industrial Service provides the technical and testing service to adapt the process to individual industry requirements. Request full information, today.

ELECTRIC POWER TRACTOR

Exerting normal drawbar pull of 800 pounds and ultimate pull of 3600 pounds, this model NTTD tractor is powered by two heavy duty tractor drive units, with two motors, which are claimed to provide maximum of traction, safety and flexibility of operation. Overall length is 84 inches, wheel base is 48 inches and height 59 inches.

Other features include four-wheel, extra large external contracting brakes, mounted on worm shaft and providing equal braking on all wheels. Frame is of heavy construction from standard plates and shapes, riveted and welded into rigid unit.

Travel is controlled by lever-operated drum type controller which is interlocked automatically with operator's seat and brake foot pedal. If controller is left in any speed position, handle must be brought to neutral, with brake released and operator seated, before power can be applied. Battery compartment can be furnished for either side or top removal of battery. Made by **Crescent Truck Co.**, 1134 Willow St., Lebanon, Pa.

▲ Mention Item **NED-4439** when writing ▲

INSPECTION MAGNIFIER

Four models of Super Sight industrial magnifiers have been developed for use on close inspection, parts assembly and precision machining operations. Model 89ZC, illustrated, has

5-inch diameter magnifying lens with head balanced to bracket which permits its use over wide bench area and in any position. It is designed particularly for inspection work, parts assembly and bench operations.

Other models include No. 95ZC with two magnifying lenses. Five-inch top lens and 4-inch lower lens are adjustable for focus. Lenses are lighted separately, permitting use of one or both lenses as required. Head is balanced to bracket. Model 89U has 5-inch lens and is fitted with safety lens to protect magnifier. Equipped with universal brackets, this type is designed for precision machining applications.

Model 44ZC has 4-inch magnifying lens, head balanced to bracket and can be used over wide bench area. It is intended for bench work and small parts assembly. Made by **Boyer-Campbell Co.**, 6540 Antoine St., Detroit, Mich.

VERTICAL MILLER

Adaptable to production line methods, this No. 1-14V vertical milling machine is designed especially for performing vertical milling operations on small parts. Table has simple, infinitely adjustable hydraulic feed with fully automatic cycle. Table movements are effected by convenient control lever which indicates direction of movement. Feed rates within entire range of 1 to 40 inches per minute are infinitely adjustable with graduated dials.

Table has feed in both directions, rapid traverse in both directions, automatic shift from rapid traverse to feed in either direction and automatic reverse at both ends of stroke. Practically any desired cycle can be obtained, such as milling work at one end of table while unloading and loading at other end. Dogs can be provided for intermittent milling.

Box type bed encloses motor and hydraulic actuating unit. Table rides directly on ways in bed. Both spindle head and head carriage are one-piece castings. Head carriage is adjustable vertically by screw with micrometer dial. Ten spindle speeds ranging from 115 to 300 revolutions per minute are quickly available through V-belt type drive. One or two-way positive stop with dwell can be furnished. Made by **Kent-Owens Machine Co.**, 958 Wall St., Toledo, O.

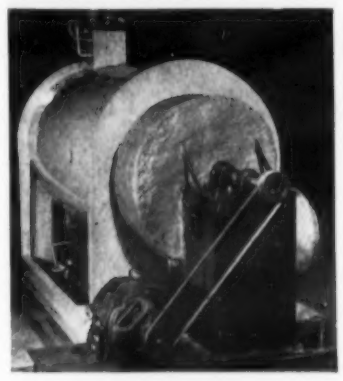
WYO-LITE PLASTIC INSULATION covers 1500 SQ. FEET PER TON



A Circulating Heater Insulated with WYO-LITE

WYO-LITE gives you the most for your money, in addition to giving you high, permanent insulation values you get greater coverage—one ton will cover 1,500 sq. ft., 1" thick. The insulating aggregate is expanded mica made from vermiculite ore. The ore has been scientifically expanded, from 15 to 20 times in volume, in a patented furnace. In our process all unexpanded ore and foreign matter are eliminated and WYO-LITE is, therefore, 100% PURE. For many years WYO-LITE Plastic Insulation has been used for insulating all types of furnaces, boilers, ovens, dryers, fittings, hot water tanks, etc., etc. Can be easily applied by your own workmen without injuring hands.

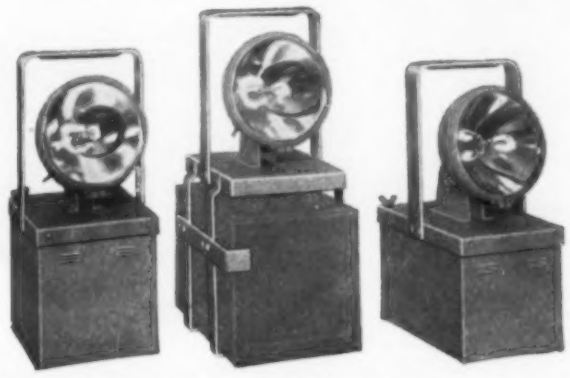
EMERGENCY REPAIR LIGHT

Used for lighting of emergency repairs of industrial plants, telephone and telegraph companies, fire departments and cargo vessels, this Damage Control Light has high intensity beam.



Lamp head assembly consists of sheet steel lamp housing to which is riveted polished channel designed for vertical positioning of lamp.

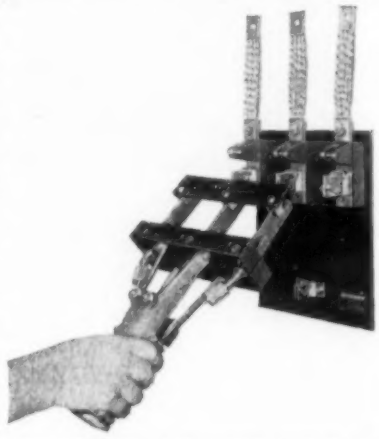
Unit is of sealed beam construction, but differs from automobile headlight in that it has clear face which transmits light without diffusion. Lamp is contained in housing, which is held in position by means of steel bezel or clamping ring, steel flanged washer and gasket.

Lamp is operated by wet cell battery that is equipped with indicator revealing just how much of battery charge has been used. Made by **The F. W. Wakefield Brass Co.**, Wakefield Park, Vermilion, O.

▲ Mention Item **NED-4448** when writing ▲

WELDING DISCONNECTOR

Handling of three or four welding machines in shipyards has been simplified through connection of heavy cables to single current source, mounting them on single frame with only one cable running down over side of ship. When ship is moved from one working position to another, cable must be disconnected at safety switch and then reconnected. Disconnector has been developed for this purpose.



Unit can be made to accommodate either three or four connector cable and is mounted inside box of safety switch. Box, 10 inches longer than standard, is arranged so that cover cannot be opened unless switch is in open position. Connecting and disconnecting are accomplished by simple series of steps.

Illustrated is three-pole, type S3K unit. All cable connectors are ground clamp type. Additional clip and blade serves to ground spider casting when switch is closed. Three flexible braids are atttached directly to terminal pads on load side of safety switch. Made by **Burndy Engineering Co.**, 459 E. 133rd St., New York City.

▲ Mention Item **NED-4449** when writing ▲

PROCESS TIMERS

Equipped with one-piece molded Bakelite terminal block accommodating all external wiring to clearly marked screw post terminals, as well as bridge positions for selection of desired arrangement, these series 2800 Vernier-Set timers are of improved design.

Supplementing standard built-in features is leaf-spring contact for positive make-break action. Timer and load circuits are wired independently with facilities to be wired together by placing external jumper across terminals. Special flexible wiring is used.

Timers are available in two types. They are normal-clutch-action for resetting upon power failure and reverse-clutch-action for non-resetting on power failure. Variety of sheet metal housings for surface or flush mountings, as well as cast iron explosion-proof cases for one or two timers are available.

Standard units may operate from 110 or 220 volts, 25, 50 or 60 cycles. Load contacts are rated to carry 25 amperes at 110 volts, alternating current non-conductive, thus eliminating use for intermediate contactors or relays. Made by **Temperature Control Co., Inc.**, 34 E. Logan St., Philadelphia, Pa.

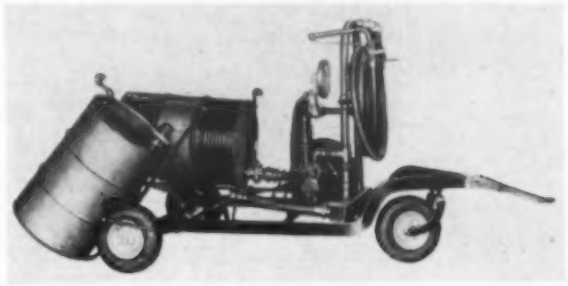
OIL TRANSFER UNIT

Consisting of pump, meter and motor, this Lube-A-Plane is used to pump and meter oil from refinery barrels to aircraft and similar equipment. It has many other applications



in industrial plants wherever oil is used.

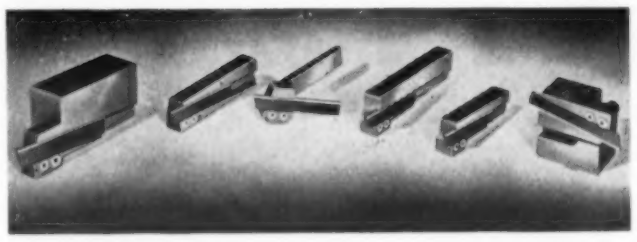
Single attendant can load and move device manually or with tractor to point of transfer of oil. Flow is regulated at nozzle. Unit is self-contained and mounted on tired wheels. All parts may be demounted and motor driven pump can be interchanged with gasoline engine driven or hand-operated unit in case of power failure.

Lever operated barrel tilting device is adjustable to barrels of various heights. Maximum flow and drainage is provided at any viscosity within temperature range specified. Unit is available in 2, 4 or 6-barrel models. Made by **Harman Equipment Co.**, 539 Santa Fe Ave., Los Angeles, Calif.

▲ Mention Item NED-4457 when writing ▲

CUT-OFF TOOL HOLDERS

Accommodating Luers cutting-off blades, this line of six tool holders adapts this method to six additional types of screw machines. Designs of holders makes possible their use on



Greenlee 4 and 6-spindle automatics, New Britain automatics, lathe and hand screw machines with round tool posts, Acme-Gridley R and RA series, and Gridley models F and G multiple spindle automatics.

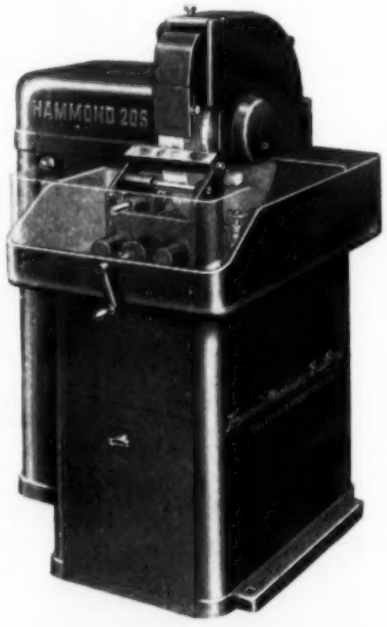
Cutting-off tool can be readily set up in machine and operator can remove blade for resharpening. Blade can then be replaced in precisely the original position without disturbing set up. Blade is held in place as rigidly as any forged blade by means of two cams which force top surface of blade against ground surface of holder, providing solid bearing. Locking device will release blade quickly and simply.

Arrangement on locking wrench serves as blade-setting gage and provides efficient means for accurately resetting blade after sharpening. Made by **Empire Tool Co.**, 8790 Grinnell Ave., Detroit, Mich.

▲ Mention Item NED-4458 when writing ▲

WET GRINDER

Featuring ability to be converted for grinding of carbide tools as well as for regular tool and snagging work, this model 20-S wet grinder incorporates modern construction. Unit has 3-horsepower totally-enclosed fan-cooled motor located in base with push-button starter high at side of machine. Starter is of magnetic type with overload, low voltage and power failure protection.



Grinding wheel furnished is 20 inches in diameter. It has 2½-inch face and 9-inch hole for mounting on large hole, wheel flange. Heavy cast wheel hood with hinged cover provides easy and quick wheel changes.

This model permits use of 64-square inch table with tilting mechanism. Table units tilt on hardened pivot pins, fitted with Oilite bronze bushings, by merely flipping convenient locking levers on sides. Entire table assembly moves in and out from grinding wheel face by means of detachable hand crank actuating protected screw mechanism.

Circulating coolant system with regulating valve located in sludge pan to right of tool rest, provides regulation of coolant flow. Detachable splash guard as illustrated, gives added protection to operator. Made by **Hammond Machinery Builders, Inc.**, 1623 Douglas Ave., Kalamazoo, Mich.

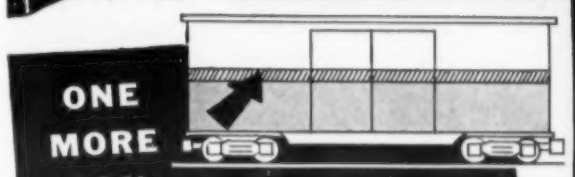
SIGNODE SYSTEM OF STEEL STRAPPING



ONE MORE TON PER CAR CAN MEAN VICTORY!

● During the first quarter of this year railroad freight averaged 29.7 net tons per car. An average increase of only *one ton per car* would mean that 96.8 cars could do the work of 100—an increase in freight carrying capacity that could help decisively to win the war.

With certain commodities already loaded to car limits, it is squarely up to other shippers to make every effort to boost *their* load totals by scientific loading methods. Make "more freight per car" a part of your production drive. Ask a Signode engineer about the Signode System which boosts car capacity by saving space and cutting dunnage...reduces loading time . assures safe transit.

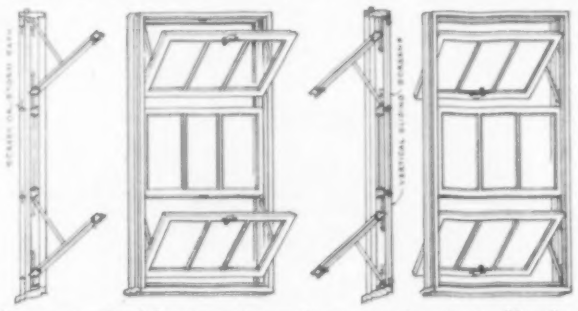
WOOD SASH COMBINATIONS

Adaptable to practically any installation requirement, these National Projected wood sash units were engineered by Graham, Anderson, Probst and White. They are available in



eighteen standard basic units, each an opening in itself, which can be installed individually or combined to meet any height or width. They may be used in both industrial and commercial buildings and with any type of wall construction.

Standardized frame is designed to accommodate either bottom pivoted in-projecting vents or top pivoted out-projecting vents without modification of hardware requirements. Units are claimed to provide maximum of light area per opening. Operating hardware is friction controlled and holds ventilator in any desired open position without danger of slamming and resultant glass breakage. Necessary hardware weighs only 3 pounds.

Installation labor is minimized through factory-fitted frames and prefitted sash. Screening or storm sash may be used in conjunction with this unit. Windows may be washed with safety from inside of building. Largest sash measures 4 by 2 feet, making units easy to handle, paint, glaze and install. Full details available from **National Door Manufacturers Association,** 332 S. Michigan Ave., Chicago, Ill.

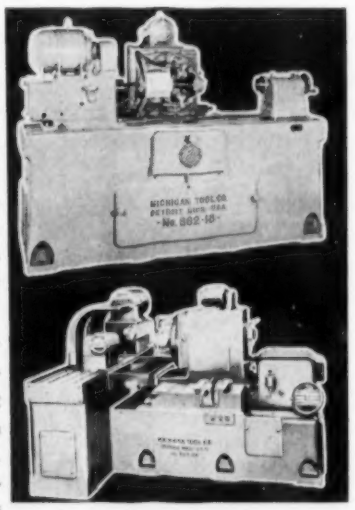
GEAR FINISHING MACHINES



Suitable for finishing gears used in speed reducers, large engines, turbines and machinery of various types, these series 862 gear finishing machines are available in two sizes. Flexibility of machines permits application of crossed-axis principle of gear finishing to wide range of gear sizes.

There are three methods of gear finishing available with these units. First is particularly suited to finishing wide face gears. Cutter in addition to having infeed toward gear is also reciprocated parallel to axis of gear. This is accomplished by placing slide which carries cutter head in horizontal position. Cutter itself is mounted on bearing spindle, with its axis at angle to gear.

Second method is used for quick finishing of gears having narrower face width than cutter. Infeed is not used in this case, but cutter head is located in such manner that axis of cutter and axis of gear are at proper center distance from each other.

Third method represents combination of first and second methods. Cutter slide is again vertical, but infeed is used. Infeed is automatically terminated by means of limit switch.

Units in this added series of gear finishing machines are all heavy-duty and are all-electric controlled. Included are splash guards, coolant pump and lubrication of machine is supplied by plunger pump and two manually operated reservoir oilers. Made by **Michigan Tool Co.,** 7204 McNichols Rd., Detroit, Mich.

D & D ADJUSTABLE HOLE CUTTER

CUTS QUICKLY AND ACCURATELY ANY SIZE IN ANY METAL

PRIORITIES REQUIRED

U. S. and Foreign Patents.

The five sizes of D & D Hole Cutters will cut any size hole quickly and accurately from ¼" to 12" and in any material from stainless steel to fibre board. The adjustable feature means a wide range of cutting size without the necessity of carrying in stock an expensive set of tools. The cutters are sharpened like lathe tools—again, no expensive set up or expert handling—thus saving time and money.

SELF-PROPELLED CRANE

In airports, airplane factories, shipyards, docks, freight terminals and warehouses, this self-propelled pneumatic-tired Hyster Karry Krane is becoming increasingly useful.

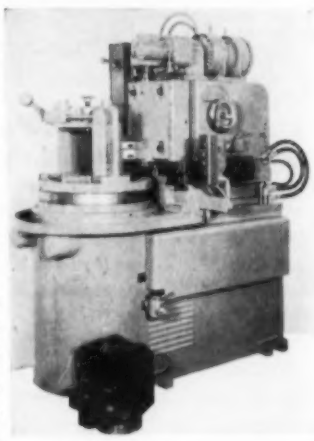
It lifts and carries loads of all sorts such as motors, sub-assemblies or anything that can be handled with slings, hooks or tongs, weighing up to 10,000 pounds. Its mobility makes possible installations and assemblies away from overhead crane facilities and in emergencies can extend assembly lines into open spaces beyond regular plant facilities.

Unit has three traveling speeds in both forward and reverse. Boom is adjustable from 9 feet, 8 inches in its lowest position where it will lift and carry loads of 4000 pounds, to 2 feet, 4 inches with boom height of 19 feet, 4 inches for loads of 10,000 pounds.

Pneumatic tires provide traction that enables it to operate over rough ground or under difficult road conditions. Unit is steered through large twin caster wheels in rear, enabling it to turn in its own length. Made by **Willamette Hyster Co.**, 2917 N. E. Clackamas Street, Portland, Ore.

▲ Mention Item NED-4474 when writing ▲

PRODUCTION MILLER



Milling of extractor trunnion pockets in gun breech ring is accomplished on production basis by this special type milling machine. Operation consists of cutting kidney-shaped slots in piece and work is done without use of special attachments, such as tracers or duplicators.

Work cycle of machine is as follows. When work piece is loaded in locating fixture and cycle starting button pressed, tool spindles start to rotate and tool spindle slide advances into position while fixture table starts to oscillate work through short arc which controls shape of slot. Slot is cut in steps which are adjustable from few thousandths of an inch to 1/32-inch deep per oscillation of table. Oscillation and tool advance are hydraulically operated and electrically controlled.

Machine consists of base, containing hydraulic equipment and piping, rotating table mechanism for work holding fixture and spindle head housing with its column, and feed mechanism. Because of full automatic cycle, it is claimed that production is much greater than could be obtained through toolroom set-up methods. Coolant is contained in side-mounted coolant trough equipped with chip basket to collect chips. Made by **Snyder Tool & Engineering Co.**, 3400 E. Lafayette, Detroit.

PORTABLE FLOODLIGHT

In combustible areas which cannot have installed lighting, this portable floodlight is battery-operated. Unit is intended for use in such places as powder igloo interiors, powder magazines, freight car and warehouse interiors containing combustibles, and during blackouts and other emergencies.

Unit consists of small steel box, 19 by 9⅞ by 20¾ inches, with special dust and vapor-proof lamp housing mounted on bracket to allow pointing in any desired direction. High efficiency glass reflector, combined with pre-focus positioning of unit's 50-candlepower concentrated-filament type bulb and diffusive lens, gives powerful medium-angle floodlighting distribution.

Five cell storage battery with nonspill valves is housed in box of unit. Quick exchange of discharged batteries for charged units is made possible through polarized connector permanently wired to battery terminals. Normal burning time for unit is approximately 10 hours. Made by **General Electric Co.**, Schenectady, N. Y.

With LIMA GEARSHIFT DRIVES on your machines, you *WILL GET* the production you want, regardless of whether these are lathes, milling machines, shapers, boring mills, planers, gear hobbing machines or any other type requiring selective speeds, there is a LIMA GEARSHIFT DRIVE to do the job.

LIMA has hundreds of users who have proven records of increased production of from 20% to 200% and over, depending on the nature of the work involved. Why not consult LIMA on your Production problems. Recommendations on your requirements will be made by Engineers who have definite knowledge and long range of experience in modernizing and motorizing machine tools and equipment.

LIMA GEARSHIFT DRIVES have numerous features designed to Speed-Up Production, to facilitate Efficiency and to afford utmost Safety to the operator. Integral automotive transmissions make possible instant speed changes by shifting gears rather than changing belts, and a hand wheel and belt guard on each unit reduces to a minimum the danger of accidents due to set-up changes. Standard mounting brackets available for most standard machines. Average installation time, 2 to 3 hours.

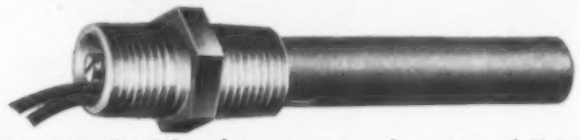
THERMAL SWITCH

Adaptable for use as light switches for stoker-fired boilers, oil burners, instantaneous water heaters and similar equipment, this coupling head Thermoswitch is designed for in-



sertion into closed liquid or gas system by means of ½-inch standard pipe thread. Many types of condulets may be attached to head for applications requiring explosionproof fittings. Switch may be used for temperature control of molding press platens and other devices.

Adjustment is made readily by turning adjustment screw. Full turn of screw effects setting by 70 degrees Fahr. For more sensitive applications, unit may be furnished with adjustment of 30 degrees per turn of screw. Adjustable operating range is from minus 50 to plus 400 degrees Fahr.

Regular switches have contacts which open on increase of temperature. Inverse styles have contacts which open upon decrease in temperature. Rating of contacts is 10 amperes at 115 volts or 5 amperes at 230 volts, alternating current. Special designs include units for operation up to 600 degrees, and in 25 ampere rating. Made by **Fenwal, Inc.**, 20 Main St., Ashland, Mass.

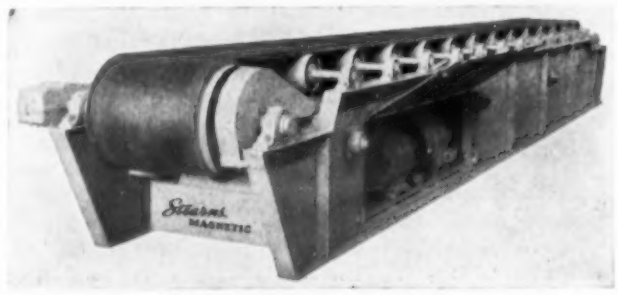
MAGNETIC PICKING BELT

Reclaming of brass and secondary metals of all types from assorted junk and metallic refuse is facilitated with this combination picking belt and magnetic pulley separator unit.



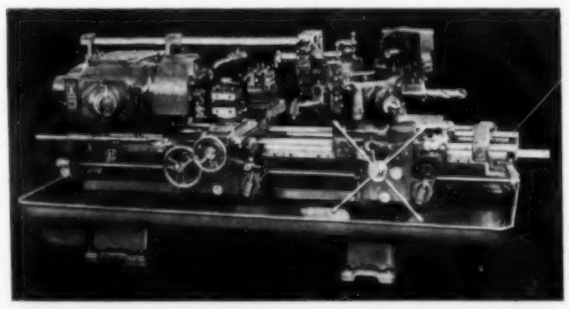
Equipment can be designed in sizes to suit practically any application. Model illustrated is 22 feet long, 30 inches high and has 18-inch endless, vanner-edged belt operating at 30 feet per minute. Belt is supported by idler rollers and machine is equipped with antifriction bearings throughout.

Drive is effected through motor reducer and generator which are installed within machine. Access to drive is provided by covers which can be opened. Arrangement of picking belt ahead of magnetic pulley provides means for sorting material by hand to eliminate bulky junk of all kinds before reclaiming brass from remaining metallic refuse. Thus, both manual and automatic operations are performed in single machine. Made by **Stearns Magnetic Mfg. Co.**, 653 S. Twenty-eighth St., Milwaukee, Wis.

▲ Mention Item **NED-4484** when writing ▲

SADDLE TYPE TURRET LATHE

Embodying labor-saving, cost-reduction and production features, models 9A and 10A saddle type universal turret lathes feature power traversing of saddle and power indexing of



hexagon turret, both operated by one lever through which both high and low speed positive traverse can be obtained. No. 9A machine has maximum round bar capacity of 3½ inches and will swing 23½ inches over way covers. No. 10A unit handles round bar up to 5 inches in diameter and will swing 27½ inches over way covers.

Heavy walled turrets permit use of abnormally large boring bars without need for pilots. Additional support for multiple turning heads is furnished by heavy stationary pilot bar mounted on headstock. Bed is of double-wall box-ribbed design, assuring strength and rigidity, and with provision for easy chip removal.

Headstock has antifriction transmission and spindle bearings. Power rapid traverse is provided for bridge type carriage and cross slide. Traverse has gear drive and is operated by single lever which controls all four movements of carriage and cross slide. Multiple tooling on front and rear of cross slide can be used to advantage.

Other features include single lever speed and feed selectors, coolant supplied under pressure directly to working face of turret, and power operated bar feed mechanism. Reversible torque motor, controlled by switch on headstock within easy reach of operator, actuates stock feed chuck lead screw through gear train and either advances or withdraws stocks as required. Made by **Jones & Lamson Machine Co.**, Springfield, Vt.

SLY DUST COLLECTOR
DOES A 4-FOLD JOB

View of Sly Dust Filter with standard supports mounted on concrete piers, for truck passage under dust hoppers.

Exhausts—
1 — Blast Cleaning Equipment
2 — Tumbling Mills
3 — Grinders
4 — Polishing Wheels and Grinders

This Sly Dust Collector consists of four dust filters, two classifiers, two combination spark arresters and classifiers, and three fan houses, as shown in the sketch. It does a thorough job of exhausting all dust created by cleaning and polishing operations.

Sly Dust Filters offer certain exclusive advantages which help enormously in efficient operation:

1. Greater filtering capacity because of more filtering cloth
2. Taut bags (patented) save power and improve dust removal
3. Bags more easily replaced
4. Automatic control (any degree) minimizes or entirely removes the human factor
5. Simpler shaker mechanism results in savings in maintenance and operation

Write us fully. We shall analyze your situation and tell you exactly what can be accomplished. Sly Dust Control pays for itself.

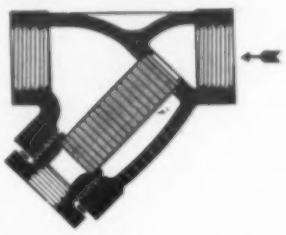
PIPELINE STRAINER

Available in six standard sizes for pipe lines ranging from ½ to 2 inches, this line of Yarway Fine-Screen strainers has been improved in design. Features include plating inside and outside for protection against corrosion. Screen is of Monel woven wire fine enough for straining service but having ample free area. Straight thread and machined face on blow-off bushing permit easy removal and replacement of screen and assure tight joint.



Constructions include iron body for pressures up to 250 pounds per square inch and steel body for pressures up to 600 pounds per square inch. Flanged end type units are also available, as are welded fittings.

Protection is afforded to steam traps, reducing valves and other types of pipe line equipment when these strainers are installed closely ahead of units. Dirt, chips, scale, welding dross and packing shreds are prevented from entering working parts of these devices. Strainers may be installed either horizontally or vertically. Made by **Yarnall-Waring Co.**, 131 Mermaid Ave., Philadelphia, Pa.

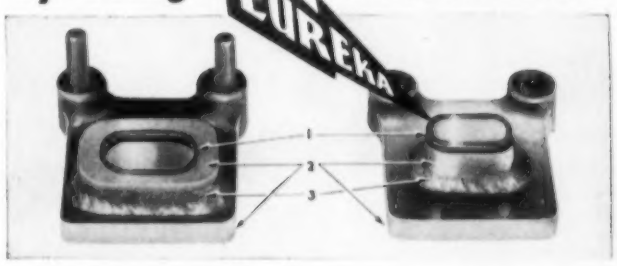
Here's an Opportunity..
to CONSERVE TOOL STEEL
by using EUREKA ELECTRODES



Yes—it's being done every day. Tons of tool steel and alloys are being saved by welding worn or fractured dies with Eureka Electrodes and the use of a vast amount of like material is being eliminated by welding on the working edges of less expensive and more easily procurable carbon steels.

HERE'S HOW IT'S DONE

Illustration shows typical fabricated dies. Arrows 1 point out tool steel electrode deposits used as cutting edges, neither of which are over 3/16 inch thick. Arrows 2 indicate machine steel used instead of tool steel to lower die composition cost, and 3 refers to construction welds made of mild steel rod to hold die parts together.

We would like you to have our bulletin which describes and illustrates in detail the application of this new type of electrode. Send for it now!

BLUE PRINT DRYER

Enabling finishing of blue prints within plant and thus safeguarding secrecy of plans, this model 130 Weaco blue print dryer handles process on spot and saves time. Unit will accommodate standard 30-inch blue print paper in lengths up to 32 inches. Chromium plated drum measures 34 by 18 inches in diameter and has drying surface of 32 by 52 inches.

Manufacturer states that dryer is exceedingly fast and will dry blue print in approximately 5 minutes, which is less time than it usually takes to expose and develop print. It uses 700 watts on 115 volts, either alternating or direct current operation. Production capacity is equal to that of machines much larger in size. Drying belt is made of pre-shrunk material which is tough in substance. Heating element is guaranteed for five years. Made by **Warren Electric Appliance Co.**, Warren, Pa.

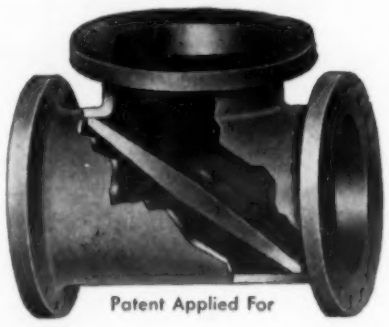
THREE-WAY VALVE

Designed for mixing and quick interchange service, this three-way butterfly type valve is adapted to fully automatic control by means of air diaphragm motor or hydraulic cylinder.



Patent Applied For

Valve is constructed of cast steel or cast iron for pressures up to 600 pounds per square inch. When desirable, special metals for resistance against heat, abrasion and corrosion can be substituted with attendant savings in cost. Special feature is self-cleaning double-beveled, streamlined vane. It seats wedge-tight against body of valve, producing tight shut-off as well as positive control of volume and pressure.

For inaccessible locations, reach rod with de-clutching unit is provided for automatic operation or manual control in case of power failure. Made by **R-S Products Corp.**, 4527 Germantown Ave., Philadelphia, Pa.

▲ Mention Item **NED-4504** when writing ▲

PUSH BUTTON CONTROLS

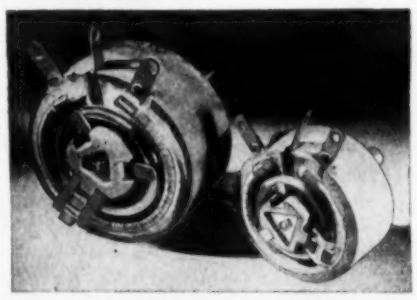
Greatly increased safety and economy are said to be outstanding features of these Safety Pull-Push push button stations for motor controls. With use being made of pull action as well as push, two operations are therefore preformed with one button which cuts in half buttons formerly required.

Single button for stopping and starting is natural even for inexperienced person. Normal position, or point of rest, is in center, requiring definite action to move it in either direction from center. Button is pushed to stop motor, but it must be pulled to start. Since pushing button can only stop motor, safety measure is obtained.

Included in this same line of controls are momentary, 3-position (start stop); momentary and maintained, 3-position, (1 off 2); maintained, 2 position, (on and off); momentary, (start); momentary,(stop). Made by **The Arrow-Hart & Hegeman Electric Co.**, 101 Hawthorn St., Hartford, Conn.

▲ Mention Item **NED-4505** when writing ▲

POWER RHEOSTAT



By simply enlarging features of 25-watt power rheostat (NED-4139, Nov., '40) this 50-watt power rheostat has been developed. Selected resistance wire is wound on an insulated metal core which distributes heat at intermediate rotational settings. Resistance element is firmly embedded in ceramic housing with an inorganic cement, resulting in solid thermal mass.

Graphited-copper contact shoe rides collector ring and winding, assuring two positive sliding contacts. Contact pressure is provided by helical spring, concentrically mounted about shaft whose action is evenly distributed by use of tripod-type contact carrier. Contact is insulated from metal shaft by center ceramic insulator, thus providing dead shaft and mounting bushing. Unit is available in any resistance value up to and including 10,000 ohms. Made by **Clarostat Mfg. Co.**, Dept. NED, 4139 N. Sixth St., Brooklyn, N. Y.

Unit Heater . . . sets new standard of quietness and heating efficiency

This new improved Unit Heater incorporates every Unit Heater advancement that McCord engineers and the experience of thousands of users could suggest. The distinctive modern design with rounded corners combines improved appearance with greater strength and houses an all copper heating unit that is said to set a new standard of heat transfer efficiency and quietness. Individual tubes are used because they have been found to prevent stresses due to unequal expansion. The entire heating unit is spring suspended and floats free in the casing, eliminating rigid connections. Fans used are deep pitched and carefully balanced. A new baked crinkle enamel finish, the latest development in the paint industry, harmonizes with the interior trim and provides a bond against corrosion. These new McCord Unit Heaters are being widely used in shops, restaurants, and offices. This company also recently announced an improved Vertical Projection Type Heater. This type of heater is particularly adapted to the heating of high and wide buildings. **McCord Radiator & Mfg. Co.**, Detroit, Mich.

LITTELL REELS *for* COIL STOCK

No. 3-G Littell patented Motor-Driven Automatic Centering Reel. Can be used for unreeling materials. Supplies a free loop of stock to automatic feed, regardless of weight of coil.

Coil capacity, 300 lbs.

Will take coils max. width 6½", max. O.D. 48", I.D. 8½" to 21".

A centered coil unreels smoothly for both hand and automatic feeding—for faster, better, more economical production.

Littell Automatic Centering Reels are constructed with four arms which operate all at the same time. A free loop of material is supplied to automatic feed, regardless of weight of coil.

Littell Reels are made in 100-lb. to 20,000-lb. capacities. Automatic spindle and cradle types. Plain and motor-driven. *Request bulletins.*

OTHER PRODUCTS

Littell makes a complete line of Roll Feeds, Dial Feeds, Magazine Feeds, Hopper Feeds, Air Valves and Pres-Vac Safety Feeders for punch presses. *Request catalog.*

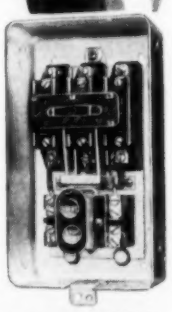
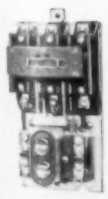
NEMA Size 1 for A. C. Motors from 1½ to 7½ h.p.

The Cutler-Hammer Size 1 Bulletin 9115 Manual Starter with PUSHBUTTON operation has the famous C-H Eutectic Alloy Overload Protection, dust-safe VERTICAL contacts, interchangeability of parts with the C-H Size 1 Magnetic Starter, and many other positive advantages. Note the compactness, modern styling and appearance, and convenience of wiring. The 3-pole pushbutton starter is priced at only $9.50; other sizes in proportion. Write at once for further details. CUTLER-HAMMER, Inc., 1377 St. Paul Ave., Milwaukee, Wis. *Associate:* Canadian Cutler-Hammer, Ltd., Toronto, Ont.

These features tell the whole story

1. Heavy "fine" silver contacts. Easy to inspect and replace. Interchangeable with contacts on Size 1 C-H 9586 Automatic Starters.
2. Clamp type pressure connectors on line terminals.
3. Easy operating, quick break pushbutton mechanism.
4. Rubber mounted panel with effective grounding clip. Loosen one screw to remove panel.
5. Modern enclosing case with exceptionally large wiring space, plenty of knockouts.
6. Heater coils interchangeable with size 0, C-H 9115, sizes 0, 1 and 2, C-H 9586 and many other standard C-H Starters.
7. In 2, 3 or 4 pole construction.





Skeleton Type 3 Pole Pushbutton Starter
Solves costly built-in control problems for busy manufacturers. Same features as in enclosed starters shown.

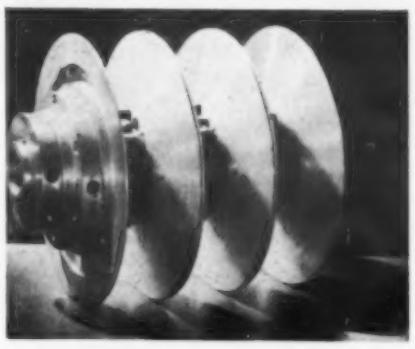
VARIABLE PITCH SHEAVE

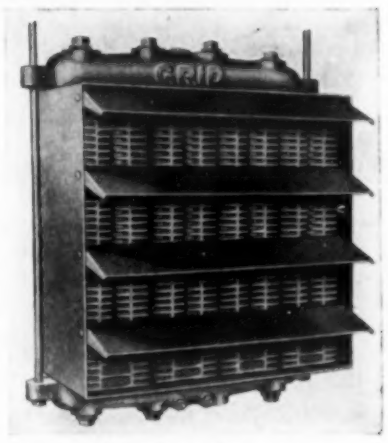


Developed particularly for textile mill machinery and machine tool applications, this wide-range Vari-Pitch sheave affords wide ranges of speed variation for power transmission purposes. Speed variations from 66 to 116 per cent are possible. Sheave is used with companion unit, both of which are grooved for new, wide Texrope V-belts.

Units are manufactured in sizes to fit shafts of all standard NEMA motors from fractional to 30 horsepower capacities. Companion sheaves are available to meet requirements of wide-range applications. Made by **Allis-Chalmers Mfg. Co.,** 6900 Norman St., Milwaukee, Wis.

▲ Mention Item **NED-4512** when writing ▲

UNIT HEATERS



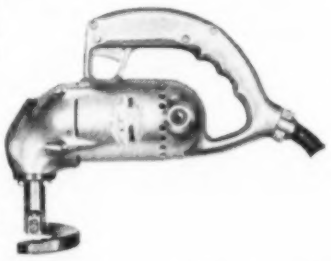
Engineered and constructed to withstand steam pressures up to 250 pounds per square inch, these Grid heaters are now made with cast iron heating sections instead of aluminum heating sections. Unit is free from electrolysis that causes corrosion, leaks and breakdowns. This quality is obtained by having only one type of metal coming in contact with steam or hot water.

Unit is available in eight sizes for practically all industrial heating applications. It is said to be dependable and stable in operation. Made by **D. J. Murray Mfg. Co.,** 139 Murray Ave., Wausau, Wis.

▲ Mention Item **NED-4513** when writing ▲

ELECTRIC SHEAR

Redesigned to improve ease of handling and operating characteristics, this No. 18 Lectro-Shear has been reduced in outer dimensions so that motor housing forms comfortable operating handle. This reduces length and weight of tool, and improves operating balance and control.



Power capacity of tool is same as in previous models, cutting up to No. 18 gage sheet steel. Larger No. 16 Lectro-Shear has been equipped with improved operating handle which gives this tool better balance and easy control on curved or irregular lines. It is equipped with instant release trigger switch, with locking pin for continuous operation. Handle is so shaped that it can be used over tool or at rear end. Power and capacity is same as in previous models, cutting up to No. 16 gage sheet steel. Made by **Black & Decker Mfg. Co.,** Towson, Md.

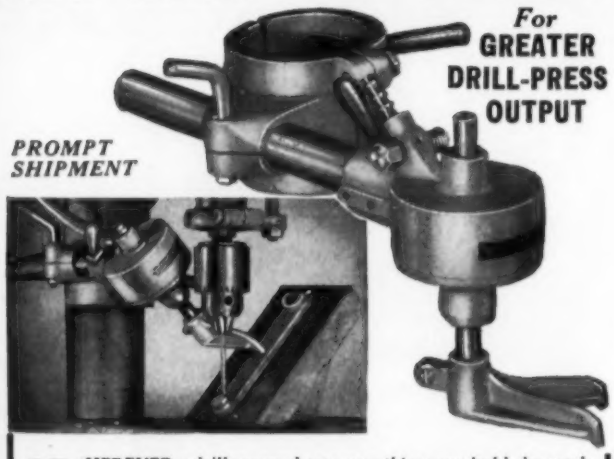
NEW MEAD AIR-CLAMP

For GREATER DRILL-PRESS OUTPUT

PROMPT SHIPMENT



WHEREVER a drill comes down, *something* must hold the work. Wherever a drilling jig is required, *Air-Clamp* will simplify it. Wherever *speed* is desired, *Air-Clamp* will produce it. *Air-Clamp* holds with relentless pressure; it is undisturbed by size variations (such as in castings), it scoffs at vibration (how many drills have been broken due to faulty holddowns?), chatter, snagging. *Air-Clamp* holds work of any size or shape in any position, at any angle. It can pay for itself on a single fixture; it can save its cost on a few days' drill-press output. It reduces operator fatigue. It saves hours and dollars in drafting-room, jig department, tool room and production line. *Air-Clamp* fits any drill-press having a cylindrical column. Special fixtures for Tee-slotted tables, light milling work, etc. Hand and/or foot control. Shipped on approval to responsible concerns.

FOOT AIR CONTROL READY!

For air-operated devices. Frees hands—Speeds up work! Two types: Model "ON" releases work when pedal is pressed . . . Model "OFF" holds work when pedal is pressed. Low priced. Write!

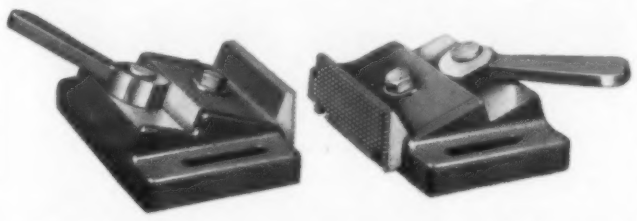
QUICK ACTING VISE JAWS

Designed for clamping parts to be machined securely to face of work table, these E.C. quick acting vise jaws are available in sets. Combination consists of two moving and two



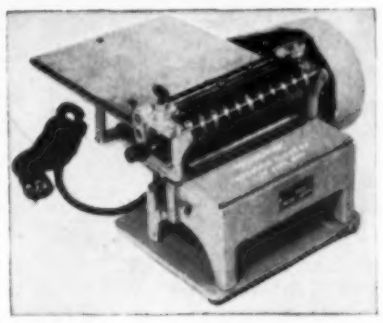
stationary jaws as shown. Where large work is to be clamped, several sets may be used simultaneously. Available sizes have 2¼, 3 and 5-inch jaw faces.

Clamping jaw moves downward at angle of 20 degrees, assuring that work is held securely against table or fixture when eccentric cam lever is tightened. Clamping jaws are fitted with compression springs which automatically return them to neutral position when lever is released.

Stationary jaws are made of cast steel and serrated face of jaw is hardened. Adjustable clamp base is made from semi-steel. Eccentric cam action movement is approximately ¼ inch. Slots in base permit adjustment on table of 2 inches. Two bolts are furnished with each jaw for fastening unit in T-slots of table. Made by **Ekstrom, Carlson & Co.**, Parmele at Railroad Ave., Rockford, Ill.

▲ Mention Item **NED-4522** when writing ▲

ELECTRIC LABEL PASTER

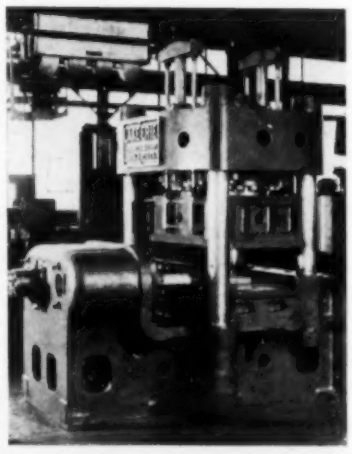


Application of glue to paper, light cardboard and cloth labels, up to 6 inches in width, is facilitated with this Whirlwind electric label paster. Embossed paper and light metal seals can be handled, also. All parts are removed easily for inspection and cleaning. Control of glue application is afforded by regulating contact between dual glue rollers. This design provides economical glue consumption and permits regulation in accordance with type of label used. Tendency of label to curl, wrinkle or blister is eliminated.

All glue passes between rollers which act as grinding mill and pump combined, removing lumps, keeping glue mixed and free flowing. Stainless steel pickers, shaped to repel glue, permit quick removal of labels. Power is supplied by 1/20-horsepower motor which will operate from any light circuit. Explosion-proof motors are available where required. Machine occupies about one square foot of bench space. Made by **Scientific Filter & Materials Co.**, 1 Franklin Sq., New York City.

▲ Mention Item **NED-4523** when writing ▲

PLASTIC MOLDING PRESS



Developed for molding phenolic plastics, this 450-ton angle press is hydraulically operated. Machine is complete and may be connected directly to accumulator pressure system.

Platen measures 24 by 50 inches. Vertical stroke is 12 inches and horizontal stroke is 10 inches. Main bed is of one-piece cast construction. This design assures maintenance of correct alignment of both vertical and horizontal operating units. Made by **Lake Erie Engineering Corp.**, 501 Woodward Ave., Buffalo, N. Y.

▲ Mention Item **NED-4524** when writing ▲

FLUORESCENT FIXTURE

All models of Day-Line V-series industrial fluorescent fixtures are now equipped with reflectors made of non-critical materials. Reflection factors of over 81 per cent are obtained in these pressed wood reflectors through use of enamel finish, baked at 325 degrees Fahr. Savings of 64 per cent of steel normally required in fixtures is obtained with this construction.

Standard servicing and installation features are retained, including easy removal of reflectors and starters, and simple suspension methods. Series includes units for individual or straight-line mounting for two or three 40-watt fluorescent lamps, or for two 100-watt lamps. Made by **Day-Brite Lighting, Inc.**, 5428 Bulwer Ave., St. Louis, Mo.

▲ Mention Item **NED-4525** when writing ▲

TWO NEW COMPOUNDS PICK UP OIL & GREASE

No. 1 for Oily and Greasy Floors - - -
No. 4 for Soluble Oils with Water Dilution

Two "SAFETY" floor cleaning compounds for oily and greasy floors are in wide use, reducing accidents, eliminating fire hazards, replacing weekly scrubbings with caustics and lyes.

Both compounds are natural products, merely being sprinkled on floors and allowed to absorb oils and greases which they do in a few minutes, or hours depending on concentration. In some cases cleaning compounds can be re-used many times.

These inexpensive compounds are dustless, dry material, having a particularly high affinity for oil and grease. They are non-inflammable and contain no acid or other artificial ingredient. Fire hazards from oil and grease impregnated flooring are entirely eliminated.

Particularly important is the fact that slipperiness due to oil and grease is immediately eliminated with a thin layer of either compound.

Compound No. 1 is effective on ordinary oils and greases while compound No. 4 is for soluble oils in conjunction with water dilution.

Write today for complete information on these "SAFETY" floor cleaning compounds . . . **Fisher Equipment Co.**, 6315 Ellsworth Ave., **Detroit, Mich.** —Advt.

Another NEW "Bakelite" Plastic

A PREFORMABLE impact-resistant molding material

IMPACT resistance is an essential requirement for many wartime plastic products. Until recently the use of impact-resistant molding materials involved the comparatively slow and laborious method of weighing each charge. Because of their fibrous fillers, many of these materials have been difficult and even impossible to preform in automatic tabletting machines.

With the development of XM-15000, however, Bakelite Plastics Headquarters now makes available an extremely tough yet easily preformed plastic. Offering three to four times greater resistance to impact than the general-purpose wood flour-filled phenolics, it can be automatically and uniformly tabletted even on high-speed rotary preforming presses.

Since XM-15000 is a diced or macerated form of the well-known BAKELITE molding blanks, it provides all of the toughness, water resistance and other physical characteristics for which these unique materials are noted. Its dielectric strength and volume resistivity are high, and may be doubled when it is preheated for 30 minutes at 220 deg. F. Because of the absence of fabric fillers, its surface appearance is comparable to that obtained with general-purpose phenolics.

Investigate this new impact-resistant material for essential applications. For further information, write Department 16.

3 WAYS Bakelite Plastics Headquarters can help you speed production and conserve strategic materials

1 With helpful, technical booklets on the various types and forms of BAKELITE plastics, and their fabrication.

2 With help in utilizing present plastics and developing new specialized formulas for most efficient production.

3 With prompt field engineering service to manufacturers engaged in war production.

RIGHT-ANGLE NUTS

Developed for blind right-angle attachments, this Angle Anchor Speed Nut combines standard U type nut with cadmium plated angle bracket. This unit is for use where access is from only one side.

Available for use with 6-32 and 8-32 machine type screws and 4Z, 6Z and 8Z sheet metal screws, these units also come in 86, 90 and 94-degree angles. Providing spring-tension grip that permanently resists vibration, fasteners are particularly suited for attachment of junction box covers, switch box covers, fairings and other angular attachments.

Standard shape and rivet hole spacings make unit interchangeable with other angle lock nuts. Made by **Tinnerman Products, Inc.**, 2044 Fulton Rd., Cleveland, O.

▲ Mention Item **NED-4531** when writing ▲

MULTIPLE-ANGLE DRILL

Featuring drill head which can be set any angle through 360 degrees, these pneumatic multiple-angle Cleco drills, models 9D010 and 9D020, will fulfill function of several angle drills. Head swivels in two planes. Besides facility with which it can be set for drilling at any angle, it can also be turned to any position relative to location of throttle lever.

Design permits fingers of operator's hand to be brought close to point of application, increasing accuracy of handling drill, and insuring more speed in changing from one position to another.

This drill weighs 2½ pounds and is about 8 inches long when set for drilling in direction parallel to center line. Chuck takes ¼ inch drill. Speed of model 9D010 is 1000 revolutions per minute. Speed of model 9D020 is 2000 revolutions per minute. Made by **Cleveland Pneumatic Tool Co.**, Marble Ave. & E. 78 St., Cleveland, O.

POLISHING BRUSH

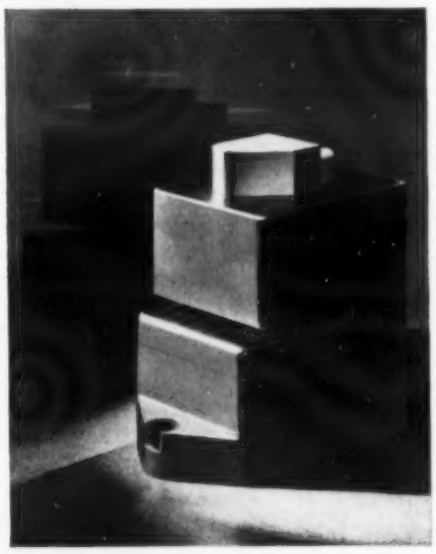
Eliminating stress concentration points on metal surfaces, this Tampico fiber polishing brush is used for removing rough tool marks and finish defects in aircraft and other machine parts where stress failure is important. Manufacturer claims that polishing and surface blending of finished parts removes stress concentration points and greatly increases service life of part.

Brushes, made of tampico fiber in form of cylinders and flat discs, are used with finely powdered alundum suspended in suitable pasty material. Special treatment of brush fibers prevents fluttering while in motion. This method permits polishing of connecting rod in fraction of time normally required

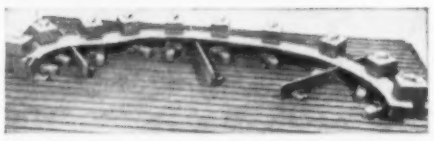
Brush does not impart luster as high as that secured with other polishing methods, but surface is more suitable for machine parts. However, finish is so uniform that inspection is made by light reflection method which reveals irregularities in order of 0.000008 inch. Made by **The Osborn Mfg. Co.**, Brush Div., 5403 Hamilton Ave., Cleveland, O.

▲ Mention Item NED-4542 when writing ▲

NOTCHING DIE



For notching aircraft bulkhead clearances and similar notching operations, this die has been added to Wales line. Nothing is attached to ram of machine. Self-contained holder maintains constant punch and die alignment. Lower illustration shows dies clamped in position and bulkhead inserted in dies ready for punching.



Top portion of punch fits into notches in templet for instant resetting and removing from rails, templates or T-slotted plates. Notching units set up in series, as illustrated, can be used for every size and shape of bulkhead. Standard and irregular notching patterns are notched in one stroke of press ram.

Cut is clean and accurate. Faster tooling and reduced die expense and minimized set up time increases production. Made by **The Strippit Corp.**, 1200 Niagara Street, Buffalo, N. Y.

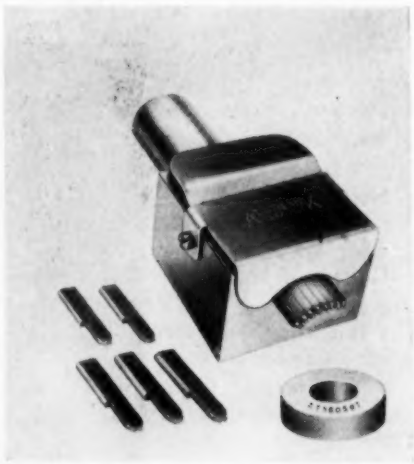
MARKING TOOL



Equipped for marking metal ordnance parts in limited areas, this type holder is made of one piece shock resisting alloy tool steel. Unit is furnished with either press shank or hand style to fit hand for striking with hammer. Steel clip holds interchangeable type in place and thumb pressure permits changing of type. Holder is solidly constructed with no holes or screws to loosen in use and shank is turned from solid steel stock.

Type is of segment shape and has heavy shoulder feature to give increased strength. All characters are engraved in clear Gothic style with strong bevel. Type is tapered and user can see place of stamping.

Holders are made to any desired curvature and capacity. Made by **The Acromark Corp.**, 7-11 Morrell St., Elizabeth, N. J.

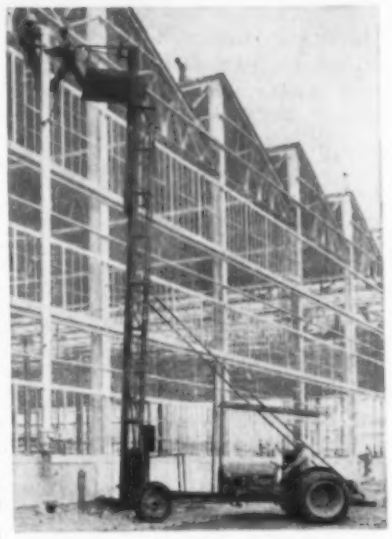
PORTABLE ELEVATOR



For use on maintenance and construction work, this portable elevator not only raises materials for installation or lowers them for removal, but it also gives large platform footing as well. Platform size is 36-inches long by 72-inches wide.

General uses of this stacker are installation of sprinkler systems, wiring, lighting fixtures, and other maintenance jobs. Unit has capacity of 1500 pounds and has an overall height of 40 feet, 4 inches. Hoist will operate on 3-horsepower 110-volt direct current motor. Lifting speed is approximately 30 feet per minute.

Illustration shows PBT Stacker mounted on large tractor. Push button control, located at right of truck operator, was used in this case to allow man riding tractor to control raising and lowering of load. Direct current generator, mounted on truck supplies power.

Portable elevator may be built with other capacities, lower collapsed height and various platform sizes. It can also be made to operate on its own wheels as conventional stacker, in which case base width would be 7 to 8 feet. Made by **Lewis-Shepard Sales Corp.,** 302 Walnut Street, Watertown, Mass.

HONOR ROLL PLAQUE

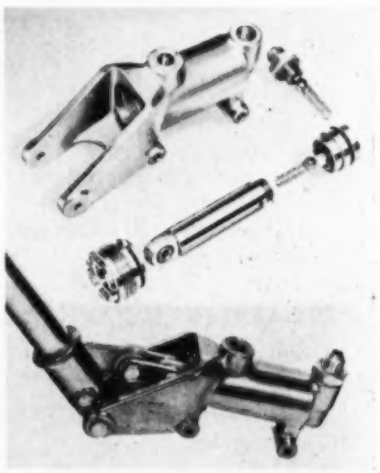
For companies wishing to honor those employes who have entered armed forces of nation, this honor roll plaque is made of crystal clear plastic sheet. It is suitably inscribed and mounted on finely finished walnut panel.

Directly below and arranged in columns are mounted individual plastic name plates on which are inscribed names of men in service. Additional name plates with pins required for mounting can be obtained as needed and easily attached to walnut panel.

Firm name also appears in gold on plastic plate. Color scheme is in gold, red and blue. Sizes are 10 by 16 inches for 16 names and up to 22½ by 42 inches for 200 names. This plastic unit is made of only non-critical materials. Made by **M. M. Gottlieb Associates, Inc.,** Allentown, Pa.

▲ Mention Item **NED-4552** when writing ▲

HYDRAULIC EQUIPMENT



Available in three models, all with 1½ cubic inch displacement, these hydraulic pumps make use of pressure molding for pump body and fulcrum. It is claimed that use of pressure molding greatly reduces amount of machining normally required on pump bodies and at same time is extremely light in weight.

Plunger assembly of pump contains number of advanced engineering principles which has reduced number of parts in pump assembly and check valves. Including handle and fulcrum, there are only 13 different parts in entire pump unit. This simplifies production and servicing as well as contributing to dependability.

This series of pumping units is labeled 66-2000 and they are available with mounting pads and port openings to meet customer specifications, which permits their interchange in current production aircraft. Made by **Harvill Aircraft Die Casting Corp.,** Dept. NED, 6251 W. Century Blvd., Los Angeles, Calif.

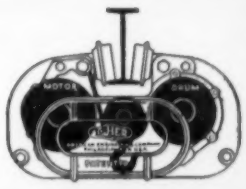
Look in classified telephone directory under "A-E-CO LO-HED HOISTS" for your nearest representative.



It took BALANCE to create this electric hoist

In a hoist, balance is mighty important for good operation. The Lo-Hed hoist was the first to achieve balance in a new way. It was the first hoist designed around the supporting beam . . . first to place motor and drum on opposite sides of and parallel to the beam . . . first to draw the hook up close to the beam . . . first to use a straight-line all spur gear drive. Time and time again, Lo-Hed has been called the "most logically designed hoist".

The Lo-Hed hoist is also a brute for punishment, as service records show. And we're building it today with the same fine precision and quality materials as always—to last for years to come. Write for the Lo-Hed catalog.

PRECISION GAGE

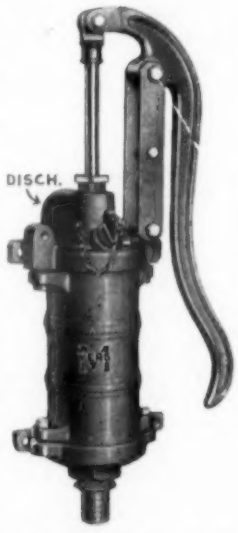
Convenient and accurate checking of large and small lots is possible with this precision type Comparator. Each small line of scale represents 0.0001 inch and displacement of 0.001 inch on measuring pin cause dial hand to move one full inch. Measuring capacity is plus or minus 0.003 inch, or plus or minus 0.05 millimeter.

Plan parallel ground and lapped table is built into machined cast iron base. Table has vertical micrometer adjustment for accurate setting of gage to zero by means of master gage or Johanson block. Disc mounted on axis of indicator hand rotates in permanent magnetic field, bringing hand to immediate rest when in use.

Lever on housing permits lifting of measuring pin before insertion of piece to be checked, eliminating shock to instrument and wear on pin. Limit hands in form of sliders permit indication of range of tolerance required. Working height capacity is up to 12 inches; throat depth is 4 inches; and working circle by swiveling head is 10 inches. Made by **American Measuring Instruments Corp.**, 40 W. Twenty-second St., New York City.

▲ Mention Item NED-4560 when writing ▲

HAND FORCE PUMP



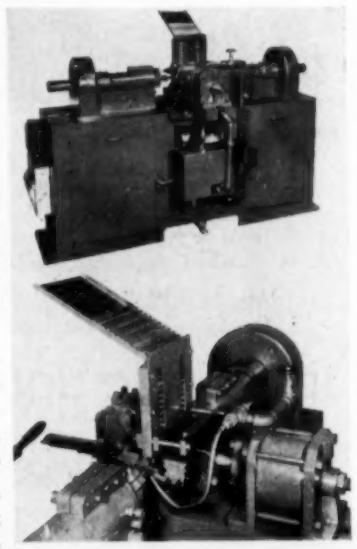
Applicable for installations requiring hand operated suction pumps, this force pump has suction lift of 25 feet and discharges 1/5 gallon per stroke. Brass lined cylinder has bore of 3½ inches and stroke of 5 inches. Unit is designed for side mounting.

Prime plug is standard equipment. Removal of single bolt permits changing of handle to either left or right for most convenient operation. Mounting brackets are provided for attaching unit to any vertical surface. Handle, oscillator links, upper cap and lower cap are held in place by corrosion resistant bolts.

Oversize packing gland is fitted with brass nut, facilitating keeping packing tight or replacing when needed. Discharge is tapped for 1¼-inch pipe and suction is fitted for 1¼-inch hose. Made by **The F. E. Myers & Bro. Co., Ashland, O.**

▲ Mention Item NED-4561 when writing ▲

PROFILER FEED



Addition of this automatic chute feed to air chuck of two-spindle profiling machine is claimed to have increased production of these machines as much as 30 per cent. Attachment is being used for feeding such items as brass and copper primer tubes for boring and tapping operations on both ends at same time.

Other uses of profilers include burring, chamfering, facing, threading, centering, reaming and boring both ends of tubes or rods simultaneously on such parts as bombs, tank tread tubes and pins. Several of these profiling operations may be combined and performed at same time. Made by **Pines Engineering Co.**, 600 Prairie St., Aurora, Ill.

V . . . *excerpt from a letter marked* **"PERSONAL"**

I've marked this letter "Personal," not as a trick to attract your attention, but because it must take the place of a personal call that I've tried to find time to make—without success.

We are busy at Foster. In a few all-too-short months, we have changed our entire organization from a private enterprise to a tireless war machine. We, too, have gone all out—not merely for defense, but for *victory*.

We realize that this change has effected our "normal" business relations with many of our customers. But these are not "normal" times . . . we *must* avoid too little, too late — war work *must* come first here just as it does in your plant.

We have not forgotten our old customers. We can still make valves for you—but if we seem slow in answering your inquiry; if our delivery dates seem unreasonable, be assured that it is not indifference, not a lack of appreciation of past favors.

It's simply that we're "in" on this business of winning the war—and when the war is won, we will be back "on schedule."

FOSTER ENGINEERING *Company*

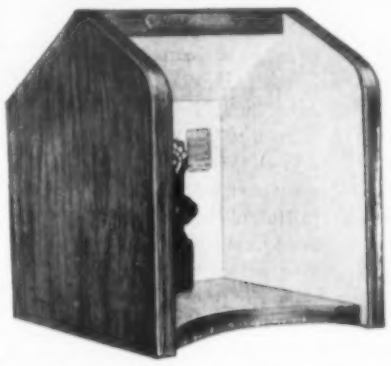
QUIET TELEPHONE BOOTH

Constructed entirely of wood, this Scout model 601 Acousti-Booth is designed especially for use where noise conditions are mild or where space is limited. Being half of size of standard unit, this model assures users quiet and privacy when telephoning, plus convenience common to shelf or wall type booths.



Applications include use in crowded areas, small shop offices and other locations where limited space prevents installation of full size booth. Walls are lined with thick, sound absorbent blanket, protected by plywood facing. These walls absorb noise, assuring user undisturbed privacy of speech.

Booth is rigidly constructed of heavy birch plywood throughout and is finished in brown walnut color. It can be supplied unfinished to permit finishing to meet customer's requirements. Shelf at bottom provides room for directory and for taking notes. Outside dimensions are 28 inches wide, 32 inches high and 26 inches deep. Made by **Burgess Battery Co.**, Acoustic Div., 2815 W. Roscoe St., Chicago, Ill.

▲ Mention Item **NED-4569** when writing ▲

DISCONNECT SWITCH

Assembled for inverted mounting with application for vertical mounting if desired, this type FB-2P 3000-ampere, 7.5-kilovolt outdoor disconnect switch is mounted on 5-inch bolt circle, heavy duty, brown glaze NEMA standard insulators.

Combination hook stick ring, positive safety lock and pressure releasing device is mounted at contact end of blade to insure easy opening.

Straight line current path and elimination of castings for current carrying parts are desirable features. It is made in all ratings from 2000 amperes and up. Voltages are up to 34.5 kilovolts. Made by **Delta-Star Electric Co.**, 2402 Fulton Street, Chicago, Ill.

▲ Mention Item **NED-4570** when writing ▲

TOOL AND CUTTER GRINDER

Handling all types of tools, cutters, cylindrical work and internal jobs, this Vernon universal tool and cutter grinder features smooth and sensitive action. Centers swing 10½ inches over table. Maximum travel is 17¼ inches. Maximum work length between right and left hand tail stocks is 16 inches. Maximum distance between centerline of work and centerline of grinding wheel spindle is 10 inches. Transverse travel of column is 7½ inches. Vertical movement of wheel spindle is 6 inches.

Spindle head is powered by ½ horsepower, 3-phase, ball bearing motor. Three speeds are provided for external spindle and two speeds for internal spindle. Auxiliary drive permits substitution of internal spindle for external unit when internal grinding work is performed. Grinding speeds are varied by changing motor pulleys only. Head swivels full 360 degrees in horizontal plane.

Elevation of spindle head on column is secured by large handwheel with dial graduated in divisions of 0.001 inch. Column is protected against abrasives and splash by accordian Neoprene boot. Longitudinal table movement is secured through V-belt drive. Transverse movement of column is obtained with large handwheel graduated to 0.001 inch.

Table swivels 45 degrees in either direction, being locked in place by three bolts which engage in T-slots in sub-table. Coolant is supplied from sump by motor drive pump. Complete accessories are available. Made by **Machinery Mfg. Co.**, 1917 E. Fifty-first St., Los Angeles, Calif.

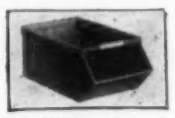
A Storage Unit that
REDUCES HANDLING
of Parts and Materials

Because Stackbins are portable containers—not fixtures—parts and materials can be carried to departments, from machine to machine, or held in stockrooms without being transferred from one container to another. Stored in Stackracks, any Stackbin is instantly accessible when its contents are needed—without disturbing any other bin.



STACKBINS are individual hopper-fronted stacking bins, designed for storage, transportation and assembly.

STACKRACKS are individual units which lock together to form storage racks of any size, shape or capacity, into which Stackbins slide like drawers.

STACKBINS in STACKRACKS offer a storage system that reduces handling, saves valuable space, and speeds work. Write us for complete details and low prices.

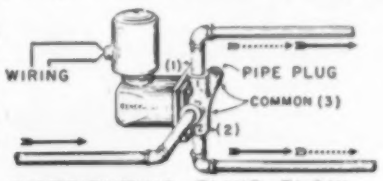
THREE-WAY MAGNETIC VALVE

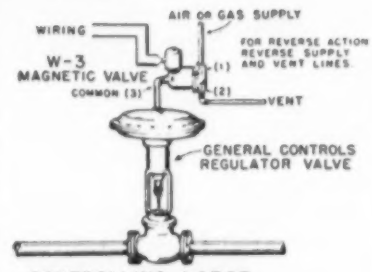
Capable of handling oil, water, air, gas, steam, refrigerants and similar fluids and vapors not corrosive to valve material, this series W-3 three-way magnetic valve includes both larger iron pipe sizes and port sizes. Fluids up to 400 degrees Fahr. can be handled. Inside pipe sizes range up to 1 inch and port sizes up to 15/32 inch.



DISTRIBUTING FLUID FLOW

Valves are used widely for control of fluids to pistons and diaphragm operators on valve, doors and gates, as well as for applications where fluids must be distributed from common source, for pneumatic pumping or for selection of fluid sources. Being of single magnetic type, device cannot assume intermediate position.

APPLICATIONS:

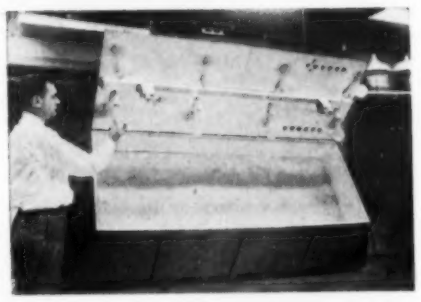


CONTROLLING LARGE DIAPHRAGM REGULATING VALVE

Simple connection changes permit reverse action. Higher pressures can be accommodated without affecting operation, as long as pressure differentials are held within prescribed limits. Valves are available for commercial alternating or direct currents. Made by **General Controls Co.**, 700 W. Ivy St., Glendale, Calif.

▲ Mention Item NED-4580 when writing ▲

MERCURY LUMINAIRE



Providing a quality of light which eliminates reflected glare from such shiny surfaces as polished sheet aluminum and other materials used in construction of war goods, this Jumbo Luminaire consumes 4600 watts and produces nearly 150,000 lumens of light. Unit employs both 3000-watt mercury tubular lamp and battery of eight 200-watt inside-frosted filament lamps. It is said to be world's largest and most powerful industrial lighting fixture.

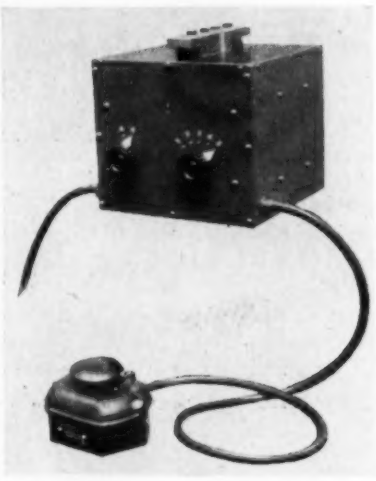
Instead of usual metal construction, fixture is made of special fibre board and has bottom consisting of ordinary tracing paper so sealed as to keep out dust and dirt. It measures approximately 8 feet in length, 4 feet in width and 2 feet in depth.

Combination of mercury and filament lamps gives as much light as that from system of seven or eight 1000-watt filament lamps. By using 3000-watt, 55-inch long mercury tubular lamp alone, replacement should not be necessary more than twice each year.

Fixtures are capable of doing work of seven or eight conventional industrial lighting units. These lights may be placed 40 feet or more above floor level. Price of fixture with lamps is $45. Made by **General Electric Co.**, Dept. CM, Nela Park, Cleveland, O.

▲ Mention Item NED-4581 when writing ▲

HEATING TRANSFORMER



Built for heating condenser assemblies, whether for three leaves on shaft, or eight or nine, these 10-inch cube transformers have 10 heat-speeds and foot-treadle for applying and cutting off current. Leads are not shown, for when assembly is ready to be heated, it is in jig.

It is suggested that wooden table be built with transformer beneath it. Attach two lengths of 1-inch diameter flexible leads from posts that are provided, to copper blocks. Blocks will project above wooden table, and can be separated by use of tapered wooden blocks. Bind flexible shaft at whatever distance apart necessary so that copper shafts to which leaves are to be soldered would rest on top of copper blocks.

Then to hold copper shafts firmly, fasten double-throw knife blade to wooden table and stand it vertically until jig and parts are on contact blocks. In 1½ to 2 seconds all leaves that are on shaft will be soldered. Developed by **American Car & Foundry Co.**, 36 Church St., New York City.

ELECTRIC FEEDER DUCT

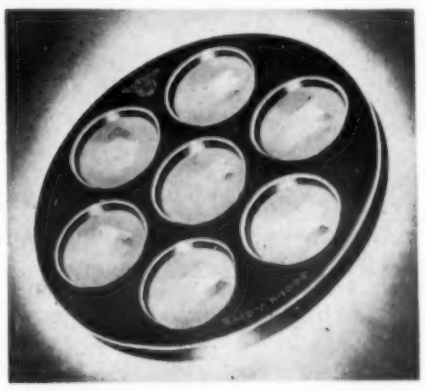
Having advantages of low resistance, this Saflex feeder duct is designed primarily to serve as feeder between transformer banks and main switchboards, or as feeders to branch circuits where minimum voltage loss is essential. It is suitable for welder circuits, also, as it provides compact conductor with voltage drop of only 1.8 volts per hundred feet and conductor size may be kept at minimum.

Duct is enclosed principally in non-metallic insulation. Absence of steel eliminates iron losses and hum, as well as pulsations sometimes experienced from impact of heavy welder loads in other types of feeders. Current losses and rejects have also been reduced.

Balanced phases are provided at all points through split-bus arrangement which furnishes electrical symmetry on phases. Uniform low voltage drop results from close spacing of busses, separated by 1/4-inch of insulation. In full load tests, temperature rise is 38 degrees Cent. Capacities range from 500 to 6000 amperes, 600 volts or less for single phase, 2 and 3 phase and 3 phase, 4 wire services. Made by **Square D Co.**, Switch & Panel Div., 6060 Rivard St., Detroit, Mich.

▲ Mention Item **NED-4588** when writing ▲

PHOTO-ELECTRIC CELLS



With an output in excess of 450 microamperes per lumen, these photo-electric cells are of self-generating type. Units are manufactured in eight standard sizes with current outputs ranging up to 4000 microamperes at 100 foot candles. Cells are permanently stable and can withstand temperatures up to 70 degrees centigrade.

Cells are said to be able to be used under most difficult atmospheric conditions. Spectral response of these cells extend from 240 millimicrons in ultra violet into 720 millimicrons in infra-red. This makes them especially suitable for all determinations requiring selective ability of human eye.

Standard cells are made in three different sensitivity ranges in accordance with requirements in various fields of applications. Made by **Emby Products Co.**, 1804 W. Pico Blvd., Los Angeles, Calif.

CLASSIFICATION RECORD

To aid manufacturers in determining monthly pattern of End-Use Classification required under Priority regulation No. 10, this No. 2468 analysis record book has been devised. All purchase orders can be entered and monthly pattern can be quickly determined by average clerk.

Book is self-indexed by classifications according to army, navy, lend-lease, foreign purchasers and domestic purchasers. Seventeen ruled columns have allocation symbol headings. List price is 75 cents. Distributed by **Horder's, Inc.**, 231 S. Jefferson St., Chicago, Ill.

▲ Mention Item **NED-4590** when writing ▲

PARTS CHILLING UNIT

Extending tolerance without sacrificing precision, this parts chilling process permits machining to be accomplished in shorter time. Seasoning time for castings is reduced also through low temperature treatment and they can be machined soon after they come from mold. Illustration shows unit chilling bronze bushings to 30 degrees below zero Fahr. preparatory to assembly in machine.

Tank, built with insulated walls, has refrigerator door type cover. Refrigerating machine is located adjacent to tank and supplies cooling effect to maintain liquid in tank at required sub-zero temperature. This liquid is 50 per cent solution of anti-freeze in water which will not freeze at this temperature. Unit made by **Carrier Corp.**, 302 S. Geddes St., Syracuse, N. Y.

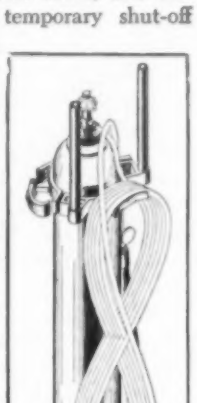
FIRE EXTINGUISHER

Consisting of 50-pound cylinder, 50-foot length of flexible rubber hose carried on upper and lower hose racks, and discharge horn provided with quick-acting temporary shut-off valve, this portable Alfite extinguishing unit may be attached to wall of cab of diesel engine by means of specially designed brackets.

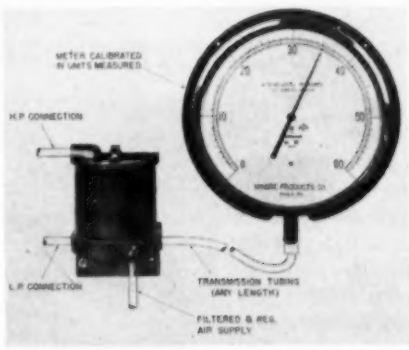


Wall brackets are of quick-detachable type allowing instant removal for extinguishing fires outside of, or beneath locomotive. Gas will not freeze at any climatic temperature. It does not deteriorate. Simple periodic weighing will check contents of cylinder. Gas is non-conductor and may be used with safety on live electrical equipment.

Fire fighting unit has been designed to occupy minimum of room within confined space of locomotive cab. It is 58 inches high by 18 inches wide, and projects from wall only 12 inches. Made by **American-LaFrance-Foamite Corp.**, 700 Erie St., Elmira, N. Y.

▲ Mention Item NED-4598 when writing ▲

PRESSURE TRANSMITTER



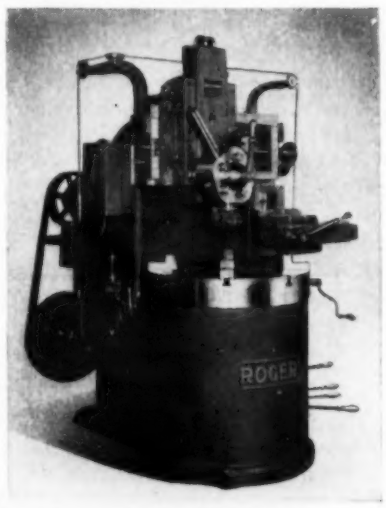
Developed to provide simple and dependable method to accurately measure and amplify small differential pressures, this pneumatic differential transmitter pneumatically transmits this amplified value to receiving meter in terms of units measured. Characteristic of method is true linear function and constant ratio of amplification.

Ratio may be varied to suit requirements, but in all cases it depends upon fixed ratio of bellows areas. System of pneumatic balance assures sensitivity. Meter finds applications involving liquid level, flow in pipes, interface level, ratio flow control, specific gravity, temperature compensation, temperature transmission and pressure transmission.

Sealed-in differential unit is made of phosphor bronze or stainless steel in accordance with requirements of installation. Separate pilot is provided where long distances of transmission are encountered. Made by **Moore Products Co.**, H & Lycoming Sts., Philadelphia, Pa.

▲ Mention Item NED-4599 when writing ▲

VERTICAL TURRET MILL



Designed for boring, drilling and turning ferrous and nonferrous castings, forgings and similar pieces, this Perfect 36 vertical turret mill is equipped to handle two operations at same time. Specially built swivel head and main head, by incorporating swivel design in side head, are able to handle operations.

For irregular pieces, side head may be set to any angle up to 35 degrees either way. Built-in graduated dial saves time in making set-ups for original and second runs. Large bearing area of tool stake and side rail, with positive clamping, assure rigidity and close tolerance work.

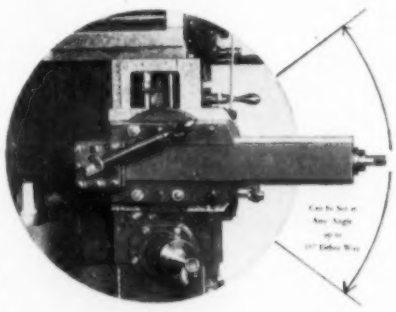


Table level horizontal chuck allows work to slide easily and quickly into exact position which eliminates usual balancing of work while clamping to chuck. In addition to swivel side head and horizontal chuck table, unit has motor driven rapid traverse, heavy duty main clutch that runs in oiltight case, foot controls and strong rigid frame.

Capacity is 36-inch diameter. Table face to turret face is 24 inches maximum and 0 minimum. Main head and side head have eight vertical and horizontal feeds each. Spindle speeds can be set to any one of eight speeds. Screw-cutting attachment is available. Made by **Rogers Machine Works, Inc.**, 125 Arthur St., Buffalo, N. Y.

FLUORESCENT STARTER

With no current flowing through ballast after "dead" fluorescent lamp has been locked out, this Master No Blink starter with its manual-reset also eliminates cooling period which is required for replacement of lamps using automatic starters. Unit keeps dead lamp from flickering.

When this device locks "dead" lamp out of circuit, small red button on top of starter snaps forward. When worn-out lamp is removed from fixture, red button is pushed in manually to reset starter, without removing starter from fixture. Lamps can be changed without shutting off current.

Starter is available for 30-watt, 40-watt and 100-watt fluorescent lamps only. Made by **General Electric Co.**, Bridgeport, Conn.

▲ Mention Item **NED-4605** when writing ▲

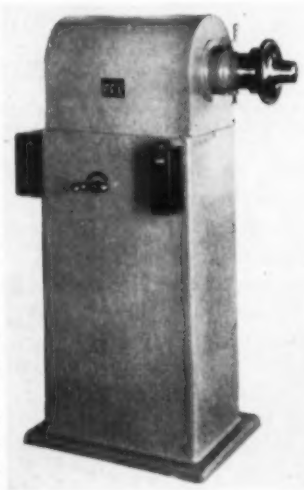
STEAM PIPE SELECTOR

Calculation of pipe sizes for given steam load is simplified through use of this rotating type Pipe Selector. Full instructions for use are imprinted on front of device. Knowing quantity of steam required, desired pressure drop, steam pressure and length of pipe line including allowance for fittings, simple settings of dial give proper pipe size to be used under these known conditions. Other useful data, applicable for solving pipe size problems, is included. List price is 35 cents. Made by **E. S. Atkinson Co.**, 1115 Sassafras St., Erie, Pa.

▲ Mention Item **NED-4606** when writing ▲

SPEED LATHE

For finishing, burring, filing, lapping or polishing, this Ideal speed lathe is designed to increase output of finished screw machined parts up to 1⅜ inches in diameter. Chuck operates spring type collet which is quickly adjusted to size of work by means of hand wheel mounted on chuck.



Unit has motor speeds as low as 20 revolutions per minute and ranging up to 4000 revolutions per minute. Speeds are in ratio of 6 to 1 for single-speed motors and 12 to 1 for two-speed motors. Spindle variation speed is obtained by movement of variable pitch pulley, controlled by conveniently located crank. Standard size pulleys are used and connection between driving and driven parts is by means of standard length V-belts. Tension adjustment for both belts compensates for wear and stretch.

Motor is spring mounted in base of pedestal and automatically controls belt tension. Motor and brake control is hand operated. Made by **Schauer Machine Co.**, 2063 Reading Rd. Cincinnati, O.

LIGHTING EQUIPMENT

Lighting of high and medium factory spaces, airplane hangars and storage rooms is accomplished with this Sterling No. 5526 unit which consists of silvered glass reflector with Light-Flo stipple in metal housing and adjustable porcelain socket.

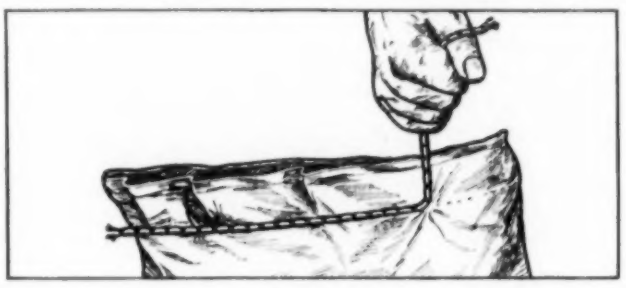
Socket may be adjusted for efficient use with 750, 1000 and 1500 watt PS lamps, as well as for 400 watt mercury vapor lamps.

Added feature is housing design which provides air passage between housing and reflector. This permits circulation both inside and outside reflector. In this way temperature is kept at minimum. Made by **Sterling Reflector Co.**, 1429 W. Hubbard St., Chicago, Ill.

▲ Mention Item NED-4618 when writing ▲

BURLAP BAGS

Providing simple quick means of opening, these Rip-Cord burlap bags are not torn or damaged in opening and valuable time is saved. Rip cord is sewn into closure of bag with regular



two thread bag closing machine. Only minor inexpensive adjustments are necessary to adapt machine.

When bag user has been closing his bags with wire ties, this newer unit will permit him to use bags two inches smaller, thus providing an economy. Rip cord method of closing and opening of bags eliminates injuries to bag and insures longer life. Made by **Bemis Brothers Bag Co.**, 601 S. Fourth St., St. Louis, Mo.

▲ Mention Item NED-4619 when writing ▲

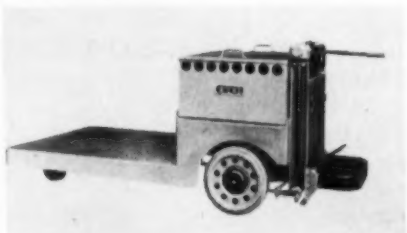
PORTABLE WATER PURIFIER

Using no chlorine or other chemicals, this self-contained model B Sterozone water purification unit is completely portable. It is light in weight and may be dropped by parachute in remote areas.

Equipment sterilizes water, killing all bacteria, controls taste and odor, and reduces color. Capacity of model is up to 1200 gallons of water per hour. Operation is fully automatic and is claimed to be low in cost. Made by **Technicraft Engineering Co.**, 5612 S. Soto St., Los Angeles, Calif.

▲ Mention Item NED-4620 when writing ▲

PLATFORM TRUCKS



With improvements along safety lines, including wiring panel cover, side plates to cover driving unit which afford added protection, and safety guards on operator's platform, this model LWH platform truck has rear axle drive. Drive axle is made in one piece and is totally enclosed.

Frame is arc welded and braced. Motor with all driving gears can be removed as single unit. Four wheel steering is made possible by vertical operating lever. Leaf springs of highway truck type support load on drive axle. Axle is exactly positioned by heavy radius bars, eliminating wobbly steering.

Unit is supplied with traction brakes of external contracting type on motor shaft. Two shoes are automatically applied by spring pressure when operator releases foot pedal, at which time controller interlock also opens electric circuits.

Battery compartment is removable from chassis. It is connected by means of plug and receptacle. Box is fully ventilated and accommodates batteries up to 24 cell Edison A-10 or C-10. Made by **The Atlas Car & Mfg. Co.**, 1120 Ivanhoe Rd., Cleveland, O.

A CLECO ROTARY GRINDER *for Every Job!*

FROM THE LARGEST TO THE SMALLEST—35 SIZES AND TYPES—
FROM 19 OUNCES TO 15 POUNDS IN WEIGHT—
FROM 20,000 TO 1600 R. P. M. IN SPEED—

PRECISION CONSTRUCTION. Cleco Grinders have alloy steel rotors and cylinders, heat-treated and then ground to exact size, thus insuring smooth, vibrationless operation at all speeds. The highest grade ball bearings are used throughout.

RUGGED DESIGN. The one-piece casting, extending around the spindle and including the cylinder, plus the use of through bolts to hold the handle, provides the utmost in durability. Improved governor design prevents metal-to-metal contact, thus eliminating wear or binding. Cleco Tools are completely rust-proof.

EASY MAINTENANCE. Only four bolts need removal to get at the rotor for cleaning or replacing blades. The automatic oiler and the Zerk fitting on the top bearing promote efficient lubrication at all times.

Write for Bulletin 80 that fully describes Cleco Grinders and includes a large blueprint of construction details.

ELECTRONIC MICROMETER

Specifically designed for uniform thickness testing of all types of plastics and similar compressible materials, this electronic micrometer is entirely portable. Unit, which is said to have been tested thoroughly in plastics industry, eliminates human element in micrometer readings.

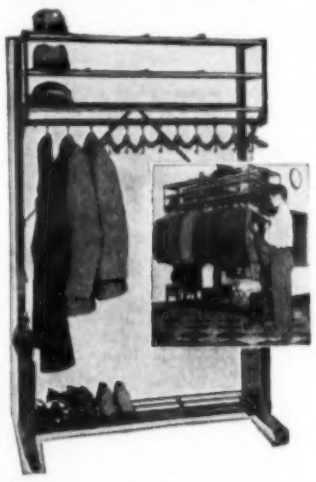
Highly sensitive electronic tubes replace operator's judgment and skill. Thicknesses can be measured to 0.0001 inch whether material be extremely thin condenser sheets or heavy weight bristol.

Electronic circuit gives positive indication of setting point, independent of "feel" on dial. Thickness is read exactly as with hand micrometer. Instrument operates from any 110-volt, 60-cycle circuit. Made by **Instrument Specialties Co.**, 25 Peckman St., Little Falls, N. J.

▲ Mention Item **NED-4628** when writing ▲

WOOD WARDROBE RACKS

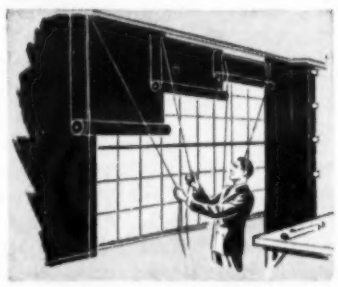
Made almost entirely of wood, this line of wardrobe racks is intended for use in both offices and factories. Design is closely related to that of Peterson steel racks, which it replaces. Finish is such that units can be added to existing installations without affecting harmony.



Wardrobe racks are available in single wall type units or double back-to-back styles. They can be made up in any length to suit user's needs. Racks provide space for coats or jackets of three to six persons per running foot. Space is provided for hats, coats, umbrellas and overshoes. All clothing is exposed to light and air. Made by **Vogel-Peterson Co.**, 1803 N. Wolcott Ave., Chicago, Ill.

▲ Mention Item **NED-4629** when writing ▲

BLACKOUT BLINDS

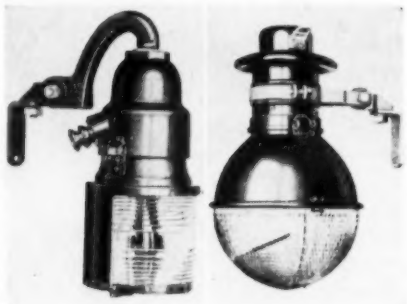


Adaptable to industrial plants, buildings in coastal areas and other structures, these blackout blinds are made of heavy fiber. They are fully light proof and are available at fraction of cost of opaque cloth shades. Being of cord type, blind raises and lowers easily. Method of overlapping permits use in any size or any number of adjacent windows. Material will not pinhole and is flame-proofed which makes it incapable of supporting combustion. Side panels are available for permanent installation at end of series of windows, at corners, posts or other obstructions to insure complete light seal.

Material may be installed on outside of skylights or for blacking out saw-tooth buildings, eliminating reflections as well. Made by **Clopay**, 1207 Clopay Square, Cincinnati, O.

▲ Mention Item **NED-4630** when writing ▲

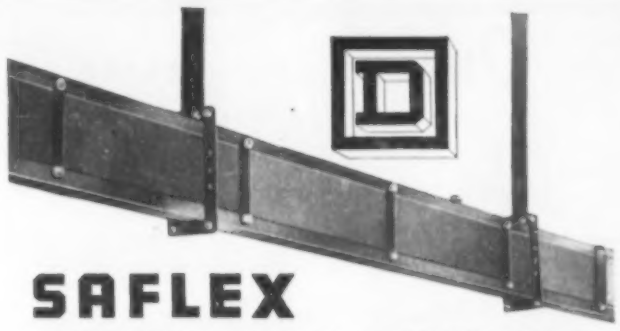
LIGHTING UNIT BRACKETS



Intended for use with either L-M Fresnel or Prismalite luminaires, these adjustable brackets are particularly adaptable for industrial plant protective lighting systems. Shown at left is pendant type with Fresnel unit. This bracket is available for either inner or outer wiring. Both horizontal and vertical setting of light beam is adjustable.

Clamp-around type bracket, shown at right with Prismalite unit, has similar facilities for adjustment so that light can be directed where required. This bracket holds fixture in compression and minimizes breakage. Made by **Line Material Co.**, 808 N. Eighth St., Milwaukee, Wis.

▲ Mention Item **NED-4631** when writing ▲



SAFLEX
(LOW REACTANCE) FEEDER DUCT

Only 1.8 Volts drop per 100 feet • Phases balanced at all points • Only 38° C. temperature rise

● Square D Saflex (Low Reactance) Feeder Duct is designed to serve as the feeder between transformer banks and main switchboard or as feeders to branch circuits where low voltage loss is essential. Because of its low reactance and consequent low voltage drop, it is ideally suited for welder circuits and, as a result, conductor size may be kept at a minimum.

Saflex Feeder Duct is available in standard 10-foot sections with special fittings to meet all types of building structures. Write for complete details.

FENCE DETECTION SYSTEM

Giving visual and audible signals at central control station when any person attempts to trespass through, over or under any fence, this Interceptor detection system is particularly

adapted to industrial plants, warehouses and grounds for prevention of sabotage or pilferage. Persons attempting illegal entry are unaware that alarm has been given.

Red light indicates point of disturbance simultaneously with continuous audible signal at plant guard headquarters or control station. Should wiring be severed, blue light and audible signal will operate simultaneously. Neither red or blue lights of signal may be restored to normal except by manual push button, located on main control panel.

Interceptor pick-up unit is permanent magnet, vibration pick-up of variable reluctance type. These devices, sealed in noncorrosive metal housing, are mounted to standard size fence posts. Amplifiers may operate on either alternating or direct current, though battery operation is recommended because of constant voltage and insurance against power failure. Pick-ups may be placed and any desired intervals along fence, up to 360 feet apart. Made by **Telectron Engineering Co.,** 381-83 W. Thirty-eighth St., Los Angeles, Calif.

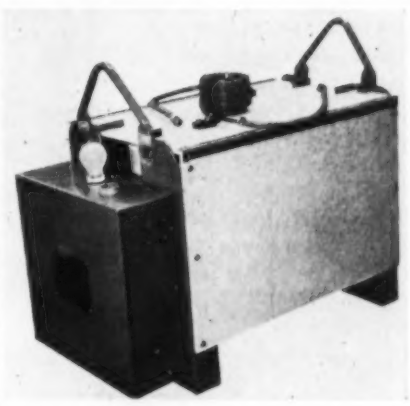
INDUCTION HEATER



Equipped with induction coils, this a.c.f. 60-cycle low-voltage, low-temperature induction heater will heat Nitralloy bushings, 3⅞-inch outside diameter by 3⅝-inch with ¼-inch wall, to 400 to 500 degrees in 75 seconds with 25-kilovolt-ampere demand.

This same type of transformer is being used in aircraft plant to heat steel crankshaft 9⅞ inches long and 4¼ inches in diameter. Heat of 400 degrees Fahr. is attained in approximately three minutes. Frozen bushings are inserted in top and lower end of shaft. Expansion of crankshaft of between 0.010 and 0.011 inch is obtained through induction heating, permitting parts to be inserted.

Similar transformer, rated at 150-kilovolt-amperes, is used for heating axles, 7 feet long by 4½ inches in diameter, to temperature of 500 degrees Fahr. in approximately one minute. Blocks on ends of leads are pressed firmly by air cylinders against ends of shaft. Temperature rise is through resistance method. Made by **American Car & Foundry Co.,** 36 Church St., New York City.

▲ Mention Item **NED-4639** when writing ▲

WEAR MEASURING GAGE

Developed for measuring precisely amount of material removed from metallic surfaces after they have been subjected to wear, abrasion, grinding, honing or lapping, this McKee wear gage will determine maximum wear to 0.0014 and minimum wear to 0.000015 inch. Measurements can be made on inside surfaces of cylinders having minimum diameter of 2-7/32 inch on flat surfaces, on outer surfaces of cylinders down to 1/32 inch in diameter and on spheres down to ¼ inch in diameter.

Unit consists of four main parts. They are indenter, measuring microscope, cylinder indentation locater and polishing template. Each instrument is supplied with multiplying factor for converting microscope readings to indentation depth. If surface is curved, correction must be made to depth measurement by referring to correction formula and table supplied with unit. Made by **American Instrument Co.,** 8010 Georgia Ave., Silver Spring, Md.

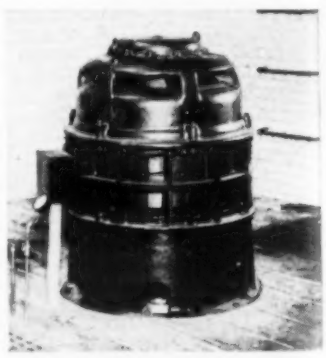
RUEPING LEATHER SOLVES DISPOSAL PROBLEM WITH FAIRBANKS-MORSE PUMPS

Rising demands of wartime needs have necessitated an increase in output at the Fred Rueping Leather Co., Fond du Lac, Wis.—just as they have in many other industries. Before output could be increased, however, the company discovered that its existing waste disposal equipment was inadequate to meet the tannery waste of stepped-up production.

To solve the problem, the company built a new pump house adjacent to one of two collection tunnels; and two Fairbanks-Morse 10" vertical, dry-pit trash pumps with a rated capacity of 3500 GPM at 80-ft. heads were installed.



Each of the pumps is driven by a 100-hp. F-M Motor through a short length of flexible shafting. One pumping unit operates alone to handle the normal flow of tannery waste, while the other pump provides 100% stand-by service. To equalize the load, the pumps are operated alternate weeks.

To keep pace with stepped-up production in industry, many companies today are standardizing on Fairbanks-Morse Pumps. They help eliminate interruptions to normal operations . . . operate efficiently with no stoppage, no breakdowns, no letdowns—now or later!

Use your priority to secure Fairbanks-Morse Pumps—and keep up production today, as well as in the years of peace to follow. For complete details, write Fairbanks, Morse & Co., 600 S. Michigan Ave., Chicago, Ill.

TOOLMAKER'S COMPASS

Designed to overcome difficulty encountered in attempting to scribe small circles with dividers, this rivet compass with pencil adapter will give positive accuracy and speed in drawing circles from few thousandths to ⅝ inch in radius.

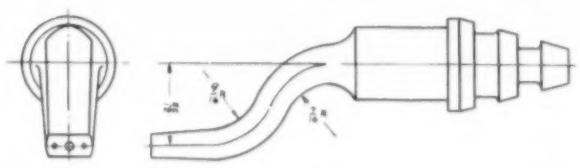
Center of unit is stationary and compass body is free to slide up and down and to rotate about it. Hardened lapped bushing is provided to insure accurate slide fit of pivot needle in compass body. For maximum rigidity and accuracy, compass is used with scribing needle as short as work will permit. For larger circles, scribing needle is set to its greatest length.

Device is supplied in durable case, complete with scribing needle, pencil adapter and supply of leads. Price is $10. Made by **The Ithaca Scientific Instrument Co.**, Ithaca, N. Y.

▲ Mention Item **NED-4645** when writing ▲

FLAME CUTTING TIPS

Bent in an offset shape to permit cutting along line 21/32 inch from vertical centerline of torch head or barrel, this style 108 oxyacetylene flame cutting tip is particularly adaptable



for working in close quarters. Offset design solves problems encountered in cutting close to bulkheads, flanges or shoulders where radius of torch head would prevent alignment of cutting orifice vertically over desired line of cut.

Tool has flat milled sides with two preheat flames, and it is suitable for either machine cutting or hand cutting operations. It is available in size numbers 1 to 3 for cutting steel up to 1½ inches thick.

Second style, No. 139, has straight tip with preheat orifice and is designed for certain machine or hand cutting operations. It is particularly adapted to splitting angle iron, straight line cutting using straight edge as guide, or sheet metal cutting operations in which light preheat is desired. Made by **Air Reduction Sales Co.**, 60 E. Forty-second St., New York City.

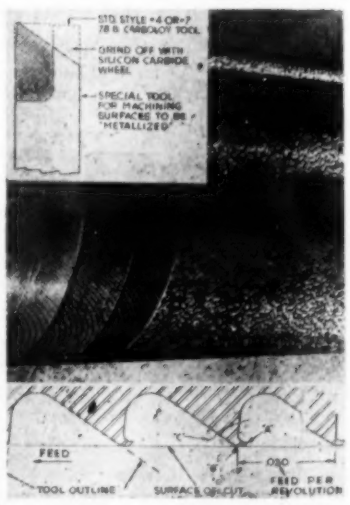
MACHINING FOR METALLIZING



In solving the problem of creating rough surfaces on parts in preparation for metallizing, Carboloy engineers used the reverse of grinding tools correctly for smooth surfaces. Standard style 4 tools were ground to unorthodox shape as shown in upper insert.

What happened when this tool was used to machine piece of tough alloy steel is shown in largest illustration. Cuts are 0.01, 0.015 and 0.02 inches deep respectively and feed is approximately 0.03 inches. Cutting speed was approximately 200 to 250 feet per minute. Surface at extreme right is perfect for metallizing, furnishing correct roughness to mechanically bond sprayed metal to part.

This method replaces more expensive knurled tools, dovetail shaped tools and other devices which worked to satisfaction with standard steel, but failed when applied to hard-to-machine alloys. Lower illustration shows how tool lifts some of the crests intermittently, presenting mottled surface which is ideal base for sprayed metal. Carbide tools made by **Carboloy Co.**, 11163 E. Eight Mile Rd., Detroit, Mich.

(1) WELD-LIKE SET-UPS: Allen Hollow Screws — Set, Cap and Flat Head Cap — hold parts together with a grip that defies vibration. Made from special-analysis alloy steel (ALLENOY) scientifically heat-treated and precision threaded to a high Class 3 fit.

(2) FAST, EASY ASSEMBLY: With the handy hex keys, "Allens" can be set up quickly in hard-to-get-at places where open end wrenches cannot be worked.

(3) ECONOMICAL and IMPROVED DESIGNS: "Allens" open a way to substantial savings in materials because of their tremendous strength and gripping power, — which makes possible the use of smaller sizes of screws, smaller flanges and lighter parts, and permits more compact designs.

(4) LOW MAINTENANCE: With these screws there are no slots to burr or become worn; no heads to become round-cornered. Replacements are practically never necessary since every screw is guaranteed perfect, being instrument-tested at every stage and inspected visually and manually.

Call on your local Allen Distributor for samples and advisory service.

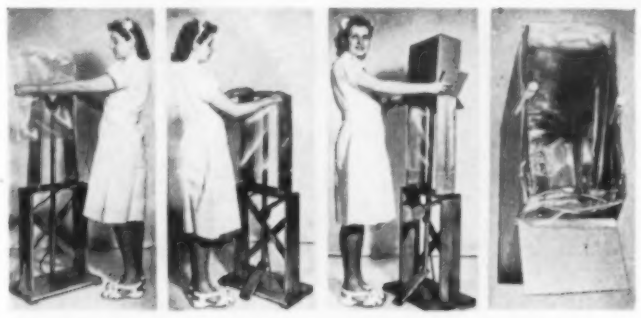
PACKAGING EQUIPMENT

Designed to facilitate insertion of Cellophane pouch liners in large size cartons, this expanding mandrel may be used for packaging of frozen and powdered eggs, powdered milk, all



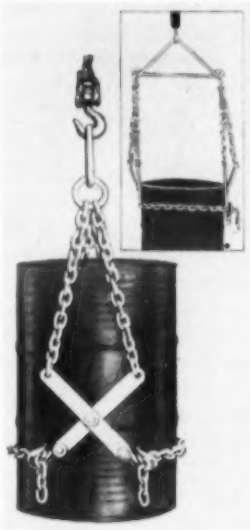
frozen and dehydrated foods, vegetable and animal shortenings and similar products.

Operator slips cellophane pouch over contracted flaps of mandrel, depresses self-locking foot pedal, which expands flaps, and pouch is held in box-like position. It then has rigidity so that ears can be easily folded over. Then carton is slipped over pouch. Operator then trips knee lever, which releases flaps so that carton with its pouch liner can be easily removed for filling.

Furnished complete with stand, unit is light in weight and easily portable. Made by **Pack-Rite Machine Corp.**, 828 N. Broadway, Milwaukee, Wis.

▲ Mention Item **NED-4658** when writing ▲

BARREL LIFTER



Capable of picking up any type of steel or wood barrel, box or container, from 40 inches in diameter down to small nail keg, this "Barrel Grab" will lift loads within this classification weighing up to 2000 pounds.

Toggle is constructed of ½-inch by 2-inch flat bar stock and pivoting pin of 1-inch cold rolled steel with retainer head. Chain is made of ⅜-inch steel, while spacer and hoisting bar are made of ¾-inch diameter cold rolled steel bar. Unit is so constructed that heavier loads force tighter grip, assuring safety and speed. Made by **Palmer-Shile Co.**, 7114 West Jefferson Ave., Detroit, Mich.

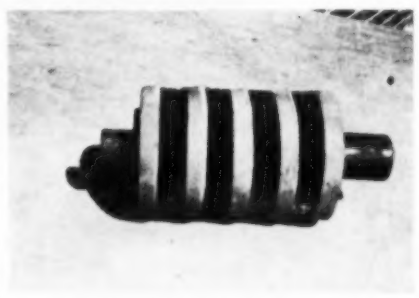
POWER SQUARING SHEAR

Having cutting length of 20 feet and by utilizing gap in housings, this power squaring shear has convenient operation qualities and quick gaging speed that reduces operator's fatigue. Unit is self-measuring, and has ball bearing, parallel back gage measuring in increments of 1/128 inch. Full visibility of cutting line facilitates cutting to scribed line.

Drive mechanism operates on anti-friction bearings and is completely enclosed in an oil-tight case. Made by **Niagara Machine & Tool Works**, 637-697 Northland Ave., Buffalo, N. Y.

▲ Mention Item **NED-4670** when writing ▲

PIPE POWER CLEANER



To keep pipe lines open and free of corrosion, this power brush is said to be capable of cleaning 4 to 5 miles of pipe per hour. Whether pipe lines carry oil, gas or other materials, there is always sludge that forms on interior. These brushes, in form of discs, are fastened to cylindrical fixture having flange at either end to hold brushes and rubber-like separators between brush sections. Discs are slightly beveled with diameter at one edge slightly smaller than diameter of pipe and diameter at other edge is slightly larger. This assures tight fit.

After brush is inserted into pipe and pipe is capped or it is inserted into pipe past gate valve which is closed. Air under very high pressure is then applied inside pipe in such way as to force brush forward. Brush being made of wire, has cutting as well as cleaning action. Made by **Osborn Mfg. Co.**, Brush Division, 5403 Hamilton Ave., Cleveland, O.

ROCKER-ARM WELDER

Available in 48 different models, these rocker-arm welding machines have three types of drives and full range of throat depths from 12 to 36 inches. Standard capacities are 20, 30, 40 and 50 kilovolt-ampere and 50/60 cycle supply with other frequencies available at slightly higher cost.

Machines are made for foot, air or motor operation. In foot operated type, pressure is obtained through foot pedal connected to rocker arm by mechanical links. Limit switch to initiate operation of contactor at proper pressure is mounted on overtravel spring.

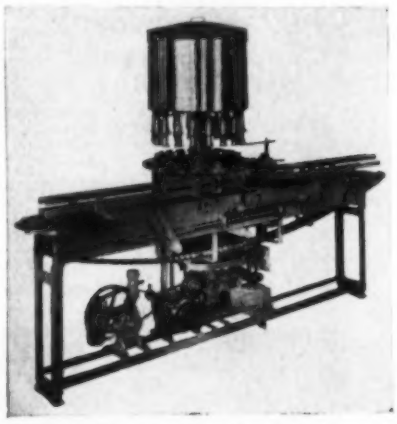
Single acting cylinder with piston rod connected to rocker arm provides pressure for air operated types with pressure regulator as standard equipment. Where air supply is limited, motor driven type is recommended.

Lower arms of unit are designed to provide range of vertical adjustments giving throat opening from 8 to 18 inches with electrodes together. Standard point opening for 12-inch throat depth is 3½ inches. In and out lower arm adjustment is available to insure proper alignment of electrodes. Lower arms may also be rotated so that welding can be performed with electrodes at angle instead of vertical.

All units are equipped with transformers with water-cooled secondaries and steel cores with pancake coils. Eight-stage heat regulator is mounted on back of each transformer. Air line lubricators, angle drilled horns, solenoid clutch, trip or air valves in combination with foot switches are listed among extra equipment. Made by **Progressive Welder Co.**, 3025 E. Outer Drive, Detroit, Mich.

▲ Mention Item **NED-4677** when writing ▲

GRAVITY VACUUM FILLER



Equipped to handle all sizes and shapes of glass and tin containers, this Fowler automatic rotating gravity vacuum filler is available in two models. While actual filling operation is in progress by means of gravity, low vacuum is maintained primarily to detect chipped, cracked or defective containers.

Containers are fed automatically into machine by means of adjustable star feed wheel which accurately centers containers under spouts against adjustable back rest. Bottles with raised decorations are handled without difficulty.

Machine is equipped with safety features that include quick stopping of machine should bottle jam on way in through feed wheel. Choke necks pass through without filling.

All parts coming in contact with liquid can be furnished in stainless steel. Changeovers from different sizes require but few minutes for adjustments. Filling heights are controlled by spacer collars on spouts combined with raising or lowering reservoir. This is done by means of hand crank. Speed of rotation is governed by adjustable V-belt drive. Made by **Scientific Filter Co.**, 1 Franklin Square, New York City.

COOLANT PUMP

Featuring adaptability as integral part of any grinder, lathe, cutting or drilling machine, this model 7500 coolant pump delivers as high as 70 per cent hydraulic efficiency by actual test. Unit is available in three different depths from flange 4⅞ inch, 9 inch and 15 inch. It can also be made in special depths to suit practically any conditions which may be encountered in applying unit to machines.

Pump is motor driven, open-impeller centrifugal type, submergable, with an outside discharge. Internal piping is eliminated and external piping is reduced to minimum. It is simple and easy to install.

Motor capacity is ⅛ horsepower to 1½ horsepower. Unit controlled flow of any standard coolant fluid is possible, ranging from 4 gallons per minute to 100 gallons per minute. It is also suitable for use with abrasives. Made by **Brady-Penrod, Inc.**, 1202 W. Second St., Muncie, Ind.

HEIN-WERNER HYDRAULIC JACKS

are super-powerful and easy-operating
3 to 30 tons capacity

Available for quick delivery to plants doing war work

If you are moving old machines or setting up new ones—or if you have war production jobs involving lifting, pressing, bending, etc., you probably can speed up your work by using Hein-Werner Hydraulic Jacks.

As one of the oldest and largest manufacturers of hydraulic jacks, Hein-Werner produces jacks that are built right and priced right. And the purchasers of *over a million* Hein-Werner Jacks know that these jacks are compact, sturdy, safe, fast and easy to operate.

This great line includes hydraulic jacks of 3, 5, 8, 12, 20 and 30 tons capacity . . . Consult your industrial supply distributor, or write us for details and prices . . . Quick delivery can be made on orders carrying priority rating.

PRESS SAFETY GUARD

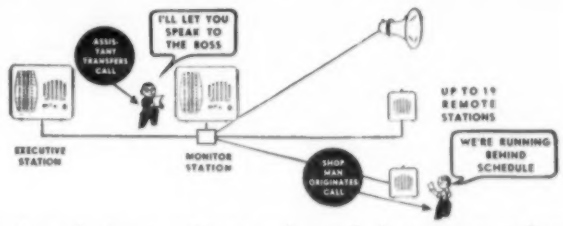
Built to fit any type of punch press, this Enclosure Safguard assures high production rates with complete safety to press operators. In addition to protecting machine operators, this guard also gives freedom of action in feeding stock and permits clear vision of work at all times. Device is instantly adjustable to any size stock, permitting front or side press feed.

Assembly is easily attached. Front and side gates swivel. Adjustable bars can be raised or lowered to suit work, or they may be set at any angle. Transparent shield can be substituted for front staple section in case extra vision is required. Guard may be adapted for blanking; strip, roll or chute feeding; notching; and for use of piercing and cut-off dies. Made by **Strand Mfg. Co.**, 162 N. Desplaines St., Chicago, Ill.

▲ Mention Item **NED-4685** when writing ▲

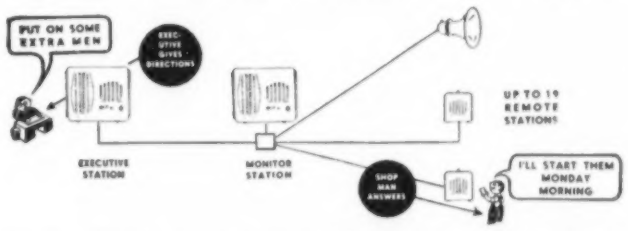
COMMUNICATION SYSTEM

Consisting of two or more master stations connecting up to 19 remote stations in system, this Executone system with intercepter control is said to be ideal arrangement for war



production plants or military and naval departments, where officers must talk to each other, to executive assistants and also to members of departments. Both executive and monitor stations are equipped with busy signals.

Paging button enables user of any master station to call all other stations simultaneously. Persons called can reply re-



motely. High powered trumpet-type substations provide extra sound volume to cover large space areas or penetrate high-noise level. Push button selection facilitates speed of operation. Electric connection is to 110/120-volt alternating or direct current circuits. Power consumption for entire system is 46 watts. Made by **Executone, Inc.**, Dept. C, 415 Lexington Ave., New York City.

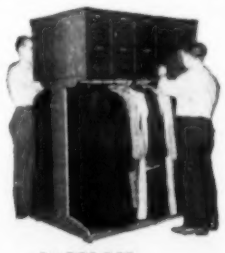
WOODEN SHOP EQUIPMENT

Made entirely of wood, these Shoprobes, lockers and cabinets replace similar pieces of equipment formerly made of steel and other materials now restricted in use by priorities.

LOCKERS



SHOPROBE
(PAT. NO. 2 202 427)

Providing full length coat hanging space and private locking compartment at convenient height, this Shoprobe is especially suited to industries in which personnel fluctuates and low storage cost is required. Twenty-person unit, double faced, requires only 13-3/5 square feet of floor space. Ten-person unit, single faced, requires only 6-4/5 square feet.

CABINET

ENGINEERED IN **WOOD** FOR THE DURATION

Lockers have hardwood top, bottom and frame. Sides, backs and doors are of pressed wood. Doors consist of two panels of pressed wood mounted on hardwood frame. There are five stock sizes available, four single tier and one double tier.

Cabinets are similar to lockers in their construction. Doors are mounted over hardwood frame and attached with three tight-pin hinges. They are offered in three types; storage, wardrobe and combination. All of above units are finished inside and out in green enamel. Made by **Lyon Metal Products, Inc.**, Dept. B, 3083 Clark St., Aurora, Ill.

MOTOR CONTROLS
FOR ELEVATING AND TRAINING THE BIG ONES

Pointing a thousand tons of gun metal with the ease that your neighbor's kid handles his air rifle is an engineering feat in itself. But directing each movement, both horizontal and vertical, so that the projectile pins its mark, miles and miles away, calls for accuracy of controls seldom required by industry. It is a tribute to the accuracy and dependability of Ward Leonard Motor Controls that our Navy is using so many Ward Leonard control devices for this and other vital functions.

HYDRAULIC LIFT

Lifting pallets and tiering them can be accomplished by this Lifter No. 379. Unit is of electric hydraulic type and lifting is done by means of ram and double lifting chain.

It is powered by 3-horsepower motor that operates pump which provides pressure for lifting ram. Capacity lift is 5000 pounds and lifting speed is 15 feet per minute. Control is by gravity through hydraulic control valve. Limit stops are provided to prevent over travel. Cable control is attached to side of machine to allow quick action from many points.

Height of unit extended is 8 feet, 5 inches. Forks are 28 inches long and 16 inches wide. Front width of machine is 30 inches. Front wheel diameter is 10 inches. Made by **Service Caster & Truck Co.**, 454 Somerville Ave., Somerville, Mass.

▲ Mention Item **NED-4698** when writing ▲

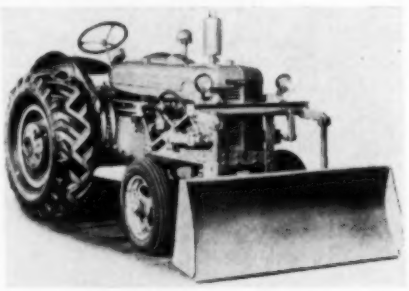
FLOODLIGHT

Featuring unique combination of socket-housing and reflector die-formed in one piece, this floodlight is made entirely of steel. Unit utilizes 200-watt bulb and provides wide beam which can be pointed in any desired direction by means of two-jointed shaft upon which unit rests.

Floodlight, known as type L-66, was designed to provide inexpensive means of outdoor illumination. It is particularly adapted to such present-day urgencies as dock, platform and airport lighting, and is useful for any other outdoor areas needing light for either protection against sabotage or speeding up night work. Made by **General Electric Co.**, Schenectady, N. Y.

▲ Mention Item **NED-4699** when writing ▲

HYDRAULIC BULLDOZER



Developed for use on light wheeled tractors, this hydraulic bulldozer model 282 can be used for finish-up work around camps and airports. It does same kind of work as larger units but on smaller scale. Machine levels, grades, backfills, spreads, excavates and removes snow. It travels at high speed and no trailer is needed.

Blade is lifted and lowered by dual hydraulic cylinders. It makes 6-inch deep cut. Moldboard can be raised as high as 12½ inches. Flexibility of unit makes it adaptable for use in mines, for mucking and for conveyor feeding. It may also be used in open pit mines and quarry floors for clean-up and shovel-feeding work.

In general industry, bulldozer may be used for building roads, handling foundry sand, spreading waste, in parking areas, and for handling solid fuel cinders. Made by **Baker Mfg. Co.**, 501 Stanford Ave., Springfield, Ill.

THE war-enforced necessity of trying out new materials and new methods has stimulated engineers everywhere and brought about a new speed in technological progress. With the aid of its suppliers and customers, Formica has participated in this progress and has recently been able to announce several new developments:

ARC-RESISTING INSULATION

Research in synthetic varnishes has made available materials which have enabled Formica to produce an electrical insulation with far greater arc resistance than was ever available in laminated insulation heretofore. It is made in paper, cloth and glass base. The Fiberglas grade shows ten times the arc resistance ever available in such material heretofore.

FLEXIBLE PLASTIC NAME PLATES

The necessity of finding new materials to replace metal brought about the development of a thin, pliable plastic sheet, into which printed material can be introduced, which can be attached to curved surfaces and can be safely riveted without danger of shattering. Material is stable in color, unaffected by grease or solvents.

GLASS CLOTH BASE

Scarcity of ceramics created a big demand for an insulating material with a low power factor, and one of the answers proved to be a laminated sheet made of glass cloth impregnated with phenolic resins and cured under heat and pressure. The material also has exceptional stability of dimensions under variations in humidity.

PREGWOOD REPLACES METAL

By impregnating wood with phenolic resins and curing it under heat and pressure a material of mechanical strength and stability of dimensions, weighing half as much as aluminum, has been made available, where lightness and strength are paramount.

PORTABLE CRANE

Available in capacities from 500 to 20,000 pounds, this portable Gantry crane is equipped with eight 12-inch service swivel casters furnished with floor locks. Unit is 12 feet high,

has lift of 9 feet and length of 27 feet, 8 inches.

Trolley hoist is optional and may be supplied to customer if desired. Hoist may also be furnished in fixed position to operate on trolley.

Unit is not restricted in its movement by tracks or overhead runways. It may be used on any good floor. It may be built in any reasonable height and may be used as truck after raising load off floor, and also for lifting heavy units onto motor trucks, tables, platforms and freight cars. Made by **Service Caster & Truck Co.**, 454 Somerville Ave., Somerville, Mass.

▲ Mention Item **NED-4707** when writing ▲

CURRENT TRANSFORMER

Developed as an aid to engineers in general testing for both watt and ampere loads on alternating current power circuits, this split core transformer will also operate graphic recording instruments as well as regular indicating instruments. Important feature is that accuracy is practically independent of tightness of closing magnetic core. It is unnecessary to open power circuit to make test.

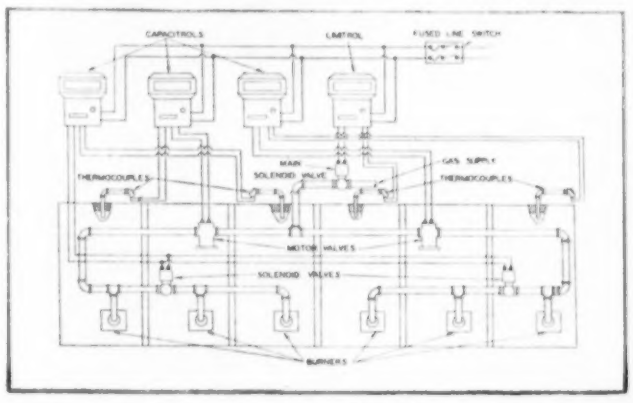
Units are compensated for 10-volt ampere instrument burden, an average for recording instruments. Because of inherent ratio stability, other instrument burdens may be used with slight reduction in accuracy. Other primary current ranges, up to 1000 amperes instrument burden compensation, as well as furnishing of ratio and phase angle curves are available on special order.

For maximum accuracy, transformers should be ordered compensated for their proper instrument burden. Made by **R. B. Annis Co.**, 1101 N. Delaware St., Indianapolis, Ind.

▲ Mention Item **NED-4708** when writing ▲

TEMPERATURE CONTROL

Designed to maintain even heat throughout multiple-burner furnace or oven regardless of heat loss, this temperature control system also provides protection against excessive tempera-



ture in event of thermocouple break. Illustration shows application adapted to furnace with doors at both ends, while modification of this burner and instrument would provide similar control on equipment with one door.

To replace heat lost at doors, burners are controlled so that those at extreme ends burn while those toward center are out. Instrument shown at left actuates two solenoid valves installed ahead of center burners. Two thermocouples at respective ends of furnace actuate two other temperature control instruments, which, in turn, operate two motor valves. These valves are installed so that one controls all burners at one end of furnace and other controls burners at opposite end.

When operating equipment on continuous car-type principle with temperature at start of process differing from temperature at end, control instruments at ends of furnace are set accordingly, while instrument controlling center burners are set at an in-between point.

In either continuous car or batch-type operation, temperature control arrangement provides exact temperature desired at all points within furnace, offsetting heat lost at door or doors. Made by **Wheelco Instrument Co.**, Harrison & Peoria Sts., Chicago, Ill.

ELIMINATES SOME COSTLY TOOLS

Case History No. 4

The adapters are clamped on a "V" block which in turn is mounted on a rotating table on a milling machine. A slotting tool ground to the exact dimension specified is fastened to the clapper box tool holder . . Each spline is cut in a few minutes—after rotating to a new position—the operation is repeated until all of the splines are cut accurately, dimensioned and equally spaced . . . Broaching—the only alternative—would have involved the expense of a series of broaches and broaching operations, because the splines stop at the shoulder of the adapter . . . . Use of the SLOTMASTER required no tooling expense and only one set-up.

Thumbnail illustrates set-up

SLOTMASTER can be used on milling machines and provides double duty facilities at a minimum cost. It requires but little time to change-over from one head to the other . . The stroke of the ram is adjustable from 0 to 4" . . the speeds range from 50 to 250 s.p.m. . . The tool holder of the clapper box type can be turned in any position . . All of the working parts are of tool steel heat treated and ground to close tolerances . . SLOTMASTER comes complete with pulleys, motor, belt and mounting adaptable to round over-arm or flat-on-round overarm milling machines.

Send for 4-page catalog and give the specifications of the milling machines that you wish to equip. Immediate deliveries on high priorities.

VITAMINS FOR WORKERS

Effective in cutting down number of absentee war workers in industrial plants because of illness, these vitamin capsules are said to conform to highest medical standards of purity. They are hermetically sealed and contain daily requirements of all known vitamins necessary to maintain normal health.

Capsules are recommended by manufacturer for industrial use. Results achieved are declared to be eminently satisfactory, having in some instances reduced volume of absences to record low.

In addition to increasing illness, it is an established fact that vitamin deficiency curtails worker efficiency. During four month test period, vitamins given in industrial organization reduced illness and decreased percentage of rejects. Capsules are packaged in bottles of 100 or in bulk containers with larger quantities. Made by **Cincinnati Vitamin Co.**, 1501 Madison Rd., Cincinnati, O.

▲ Mention Item **NED-4717** when writing ▲

CORROSION PREVENTIVE

Having properties of completely removing perspiration, water, oil and dirt from steel surfaces, this Polar K oil is said to be superior to alcohol for dehydrating and cleaning steel surfaces, bearings or similar parts which have become wet or which retain film of grinding emulsion.

Product is said to instantly displace and absorb water and to leave thin film of lubricant and rust preventive over surface. It is especially applicable for protecting during storage, water side of steam turbines, water pumps, meters and steel parts which may have been exposed to rain, immersion in sea water or damp storage.

Material has also been found successful for spraying inside of diesel and gasoline engine cylinder walls which have accumulated film of condensed moisture as result of damp atmosphere. It can also be used for flushing crankcases to remove sludge, moisture and acid salts. Made by **Curran Corp.**, Dowling Bldg., Malden, Mass.

▲ Mention Item **NED-4718** when writing ▲

CORROSION PROOF METHOD

Removing rust, blemishes, burns and marks of corrosion Corrosol No. 26 is used in cold solution. It leaves metal clean and in passive condition and does not act upon metal itself. Therefore, it does not harm cutting edge of tools.

Because solution does not act on metal, it does not encourage corrosion after metal has been cleaned. It is harmless to workman applying it and is non-inflammable. Made by **International Rustproof Corp.**, 12507-15 Plover Ave., Cleveland, O.

SAVE TIME AND MONEY BY ELIMINATING

MAKE SHIFT WORK-BENCHES

specify HALLOWELL SHOP EQUIPMENT

When you buy ready made "Hallowell" Work-Benches, you save the making of drawings, ordering of multifarious sizes of lumber, expensive carpentry and much time. You merely select the style bench you want from 1367 "Hallowell" Combinations. They are easily set up and arranged any way you want. Stay strong and rigid without costly bolting to floor. Tops may be of smooth, high-grade laminated wood, of Masonite, or, if advantageous, of steel. Choice of five leg heights and widths. And deliveries are better than average. Write for complete details—now.

Fig. 928—Drawer is extra. "Hallowell" Work-Bench with top of smooth laminated wood. Pat'd and Pat's Pending.

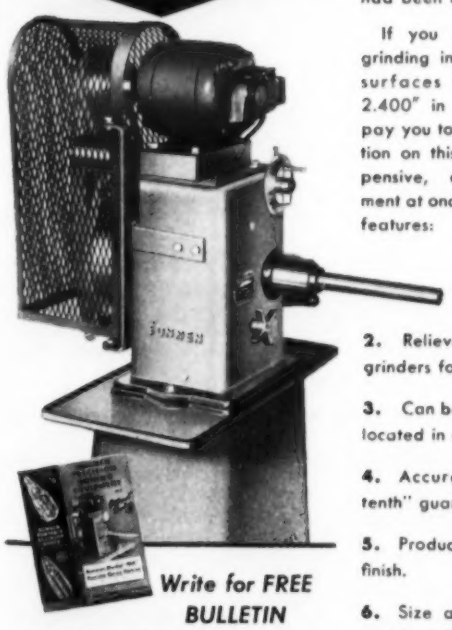
Average Number of Pieces from Header Die Increased from 25,000 to 225,000!
That's MORE Production

SUNNEN Precision HONING MACHINE

An increase of nearly 1000% in the number of pieces from a die after it had been Sunnen honed!



If you are reaming or grinding internal cylindrical surfaces from .185" to 2.400" in diameter, it will pay you to get full information on this practical, inexpensive, accurate equipment at once. Consider these features:

1. Does not require skilled labor.
2. Relieves big internal grinders for other jobs.
3. Can be set up and work located in one minute.
4. Accuracy within "one tenth" guaranteed.
5. Produces super-smooth finish.
6. Size adjustment can be made with machine in motion.
7. Corrects errors of out-of-roundness or taper caused by previous operations.

Write for FREE BULLETIN
— giving complete information and showing many examples of use. Or, if you prefer, we'll have a Sales Engineer call and demonstrate this equipment in your plant on your job.

New Processes & Materials

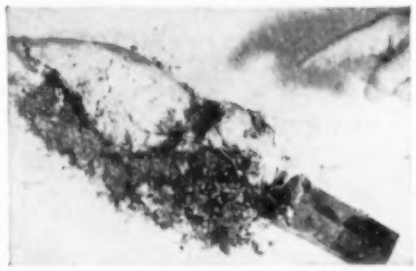
ROLLED METAL TRIM

Intended for non-drip sink edgings, this Chrom-edge line of rolled metal trims is furnished in size R-171 for light weight wall and standard gage materials, and No. R-171-A for ⅛-inch coverings. Strip also finds application for trimming outside wall corners and other types of installations.

Sections can be fitted around corners and curves readily. It is available only in 12 ft. lengths from stock. Rolled edge fits snugly over linoleum or other table-top type covering materials, sealing against leakage or entrance of dirt. Made by **The B & T Floor Co.**, Columbus, O.

▲ Mention Item NED-4725 when writing ▲

FIRE BOMB EXTINGUISHER



Composed entirely of refractory materials, this No. 555 All-Out incendiary bomb extinguisher is in form of harmless, non-poisonous fine powder. Material also can be used for extinguishing fires which occur in industrial plants producing war materials of magnesium, thermite, aluminum and similar metals.

Product is packed in 10-pound paper bags for home use and in 400-pound barrels for institutions and factories. Bag simply dropped on fire will either break or burn thus freeing powder to spread over fire. Material retains its entity until temperatures of 2500-degrees are reached, when it fuses into lava-like form to blanket and smother bomb. It will not harden and will keep its strength no matter how long it is exposed to air, moisture, cold, sun heat, brine, salt air or chemical fumes. Made by **United Laboratories, Inc.**, 16801 Euclid Ave., Cleveland, O.

▲ Mention Item NED-4726 when writing ▲

SHEET METAL SUBSTITUTE

Conforming to specifications of governmental departments, including armed forces, this Cheney Protected metal substitute for galvanized iron and sheet copper is available in sheet form. It can be sheared, bent in hand operated brake, bent on dies and run through lock forming machines.

Material contains neither coal tar nor asphalt and finished coating is tough, elastic, rubber-like material which will not run at 320 degrees Fahr. or crack at freezing temperatures. It will stand up under baking rays of sun and can be used when formed into ducts for hot air heat.

Because no coal tars or asphalts are used in coating, bleeding is eliminated which allows painting of any color direct to sheet without using shellac or special primers. Made by **Cheney Metal Products Co.**, 35 Oxford St., Trenton, N. J.

▲ Mention Item NED-4727 when writing ▲

FLAME-RESISTANT VARNISH

Designated as R-878, this flame-resistant insulating varnish is recommended for class B high temperature insulation. In addition to having good heat resisting qualities, it has all characteristics of high grade insulating varnishes. Product will not support combustion and it will not melt or resoften under operating temperatures. Varnish is said to be mechanically strong and it dries all way through when applied to electrical apparatus. Manufacturer suggests that it is definitely suited as protecting and insulating medium in windings of large electrical units as pictured in illustration. Made by **Sterling Varnish Co.**, 163 Ohio River Blvd., Haysville, Pa.

▲ Mention Item NED-4728 when writing ▲

ONE man lubricates more bearings than TEN men . . . *and does it better!*

Because with Farval, all bearings are lubricated in less than one minute from one safe central point.

Farval does a better job because each bearing receives the exact amount of lubricant it requires and the isolated or inaccessible bearing is not overlooked.

Farval increases production by eliminating all outage time for bearing repairs which always result from hit-or-miss methods of hand lubrication.

Give your oilers the tools and they will give you a better job. Install Farval!

The Farval Corporation, 3283 East 80th St., Cleveland, Ohio.

Affiliate of The Cleveland Worm & Gear Company, Automotive and Industrial Worm Gearing.

New Processes & Materials

CUTTING OIL

Increased production is claimed possible through use of Cut-Aid industrial cutting oil. This fluid was developed by chemically breaking down various animal oils, synthetically reproducing best properties of different types and blending synthetics with mineral oil. Among claims for Cut-Aid are increased penetration, cooling power, film strength and wetting power. It may be used alone or in combination with other cutting oils.

In recent test, machine was producing plume of smoke during cutting operation at 100 feet per minute. Adding this new cutting oil to lubricant already in use permitted operation at 300 feet per minute without trace of smoke. In another operation tool life was extended from 3 hours between regrinds to 11 hours in forming aluminum on Brown & Sharpe automatic, reducing round stock from ¾ inch to ¼ inch. Finish was also improved.

Oil has been found particularly effective for machining operations on aluminum, magnesium and nonferrous alloys, producing better finish at greatly increased production rates. Made by **Gulf Oil Corp.**, Gulf Bldg., Pittsburgh, Pa.

▲ Mention Item **NED-4739** when writing ▲

FIRE FIGHTING COMPOUND

Fires of gasoline, benzine, naphtha, tar, grease, oil, electric, acetylene gas, chimney and wood origin can be brought under control and extinguished by means of Whippet, extinguishing powder. It acts without water damage.

In recent tests, material is said to have put out fire caused by incendiary bomb in few seconds. It can be used with perfect safety. No equipment is necessary. It is non-poisonous and contains no noxious gases. Material is packed in 2½ pound cans for home use and in 10 and 40 pound cans for industrial use. Made by **The Halco Chemical Corp.**, 551 Fifth Ave., New York City.

▲ Mention Item **NED-4740** when writing ▲

PAINT REMOVER

Featuring non-inflammability quality, this L-595 paint remover is said to be wax-free and to require no after cleaning with additional inflammable solvents. Other than proper ventilation, no special or elaborate precautions are necessary when using this stripper.

Product will not injure polished aluminum alloy, anodized aluminum alloy, Alclad, polished steel, cadmium plated steel, stainless steel, polished copper or magnesium alloy, and with exception of rayon, it will not injure fabrics.

Material has rapid lifting action and starts almost immediately upon application. Varnish, lacquer and some enamels require maximum time of five minutes for complete removal, while most obdurate baked enamel requires not more than 15 minutes.

Manufacturer claims that remover can be used by inexperienced workmen under almost any circumstances without fear of explosion, and that its rapid swelling action speeds production. Made by **Turco Products, Inc.**, Dept. 25, 6135 S. Central Ave., Los Angeles, Calif.

▲ Mention Item **NED-4741** when writing ▲

TACK RAG

For cleaning dust and over-spray prior to painting, this O-U-Tack rag eliminates use of solvents. It is flexible and does not dry out if placed in storage. It is claimed to be immune to spontaneous combustion.

If user desires more tackiness, it is simply placed near heat. If less tackiness is required, rag is hung in open air. Product is said to be particularly applicable when preparing aircraft skins for synthetic enamel because it completely removes metal dust and other minute particles developed in drilling and riveting.

Full size samples are offered free by the manufacturer. Made by **The Robinson Specialty Mfg. Co.**, 816 West Fifth St., Los Angeles, Calif.

▲ Mention Item **NED-4742** when writing ▲

SAVES LABOR

You can eliminate many hours from your Payroll of highly-paid Machinist's time if you will let these men use the JACKSON TIME-SAVING Vise, for it cuts out the time they are forced to waste hunting for Bolts, Clamps, Angle Plates, Parallel Strips, etc. when "rigging up" work on the Drill Press, Miller, etc. Furthermore, you can eliminate the simultaneous loss of output and overhead expense incidental to having your productive machine idle during the "rigging up" process. The four-side turret jaw and supplementary jaws enable the vise to hold instantly the thousand and one shapes that arise in a Machine Shop. Send for Bulletin No. 23-D.

New Processes & Materials

PROTECTIVE COATING

Applied to practically any ferrous or nonferrous metal products, Transcote affords transparent protective coating which will resist action of strong alkalies or mild acids. It is being used for corrosion prevention in manufacture of steel shell and other war materiel.

Durable protective film is formed quickly, as finish air dries in less than 10 minutes. It may be applied by brush or spray. If dipping is employed, finish is thinned. Coverage is approximately 500 to 600 square feet per gallon. Made by **Trautman Chemical Engineering Co.**, 1515 Coit Ave., East Cleveland, O.

▲ Mention Item **NED-4749** when writing ▲

RELUBRICATION SERVICE

Intended to aid in relubrication of millions of aircraft bearings tagged by the Army for low temperature operation, this relubrication service is available to aircraft manufacturers.

Bearings are degreased, washed clean, dried, marked for identification, relubricated with approved low temperature lubricant and packaged for shipment. All work is conducted under Army supervision and in compliance with latest specifications. Service offered by **Pacific Railway Equipment Co.**, Los Angeles, Calif.

▲ Mention Item **NED-4750** when writing ▲

GENERAL PURPOSE PLASTIC

Adaptable to many uses, this Durez 11540 general-purpose phenolic molding compound is said to be useful in production of several war parts.

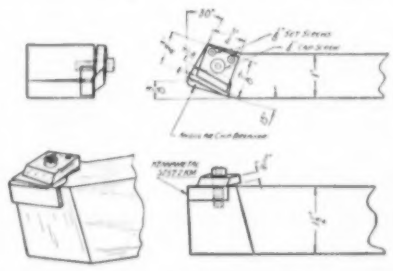
It has slightly higher impact strength and greater resistance than former top-grade general-purpose materials. Plastic is said to deliver excellent surface finish.

Material can be used for field communication equipment which must withstand hard usage, as well as for instrument cases, housings, and parts now being molded of materials with less impact strength. Made by **Durez Plastics & Chemicals, Inc.**, 1910 Walck Rd., North Tonawanda, N. Y.

▲ Mention Item **NED-4751** when writing ▲

CLAMP-ON TOOL TIPS

By using clamp-on type tool, shops making up their own carbide cutting tools can greatly simplify the job and at same time be assured of strain-free design. Sketch shows simple design which has been found satisfactory in practice.



Tool shank is milled out, care being taken to get as flat a surface under tip as possible, and simple clamp is attached. Conventional chip breaker of angular shelf type is ground into Kennametal tip so that chips will not erode SAE 1045 clamp.

Brazing strains are eliminated and grinding is simplified because only carbide contacts wheel and no steel is present to load up or glaze grinding face. One such shank will serve to mount about four successive tips before it becomes worn beyond use.

As tip is reground, it is moved forward and out under clamp, shims being placed behind it. When tip becomes too small for use in tool, it can frequently be brazed into smaller shank for lighter turning operations. Kennametal made by **McKenna Metals Co.**, 171 Lloyd Ave., Latrobe, Pa.

▲ Mention Item **NED-4752** when writing ▲

HEAT TREATING PROCESS

Applicable to stainless steel; oil, water or air hardening steels with exception of high speed; alloy steels and with certain limitations on low carbon steel, this Silver-Finish hardening process causes no change in surface analysis. No scale is formed and even polished parts retain their finish, looking like unhardened pieces.

Producing same hardness specifications as other methods, this process is claimed to effect savings as it is unnecessary to clean up dies, gages, taps, hobs, stamps, drills or other products. Finish grinding to size is all that is required. There is no discoloration, scale, carburizing or decarburizing. Process developed by **Perfection Tool & Metal Heat Treating Co.**, 1740-58 W. Hubbard St., Chicago, Ill.

▲ Mention Item **NED-4753** when writing ▲

ARE YOU USING THE RIGHT WHEEL *in the right place?*

● No matter what you use grinding wheels for, there's one simple way for you to speed up production, get better grinding results and lower your costs. Make sure you always use the *right* wheel on each job . . . a wheel of exactly the right grade. Such a wheel will do your work in a minimum of time at the lowest possible cost.

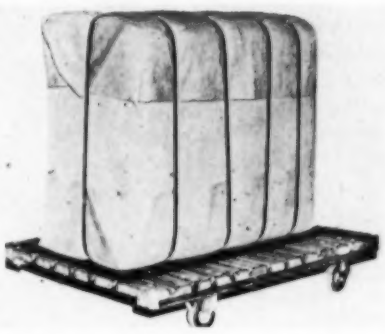
▲ Mention Item NED-4760 when writing ▲

WATERPROOF WRAPPING



Substituted for burlap in wrapping of bales of finished textile goods, CD-99 Duratex, waterproof crinkled Kraft paper, has been found to offer several advantages. Sheet is laid on table under bale. Preformed, sewn tube is slipped around bale and sheet is laid on top. Bale then goes to compressor and metal straps or wire ties are applied.

In many applications, this method results in appreciable time savings over hand sewing methods employed when burlap was used, according to manufacturer. Duratex wrapped bale is both moisture and dust proof, protecting product during shipment or storage. Paper made by **Chase Bag Co.**, corner Franklin St. & Jackson Blvd., Chicago, Ill.

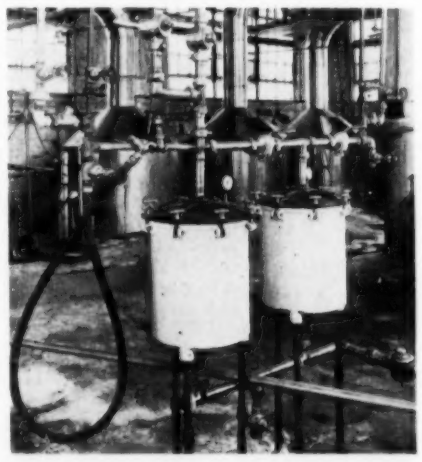
BRAZING PREVENTS WARPAGE

Two-inch solenoid core is wound on this light brass spool, which is important part of control mechanism for big guns and turrets. Brass end piece of this spool is fitted on brass tube and joined permanently to it by means of low temperature silver brazing alloy.

Former method used, called for application of high temperature brazing alloy which caused considerable distortion of spool. Distortion is now eliminated because joint is made at relatively low temperature of 1175 degrees Fahr. Joint, made easily and rapidly, is claimed to be stronger than brass parts of spool. Silver brazing alloys made by **Handy & Harman**, Dept. N-10, 82 Fulton St., New York City.

▲ Mention Item NED-4762 when writing ▲

CLARIFYING FILTRATION



Confronted with problem of clarifying a product with corrosive properties which would normally require stainless steel tanks, pipes and valves, a large processing concern used Filterstone type filters as shown. Not having high enough priority rating to obtain stainless steel filter, firm adapted these units to this work.

Filtering units consisted of porous stone members for support of filter cake suspended in acid-resistant porcelain coated tank. Necessary stainless steel pipes and valves were supplied from stock in company's maintenance department. Rigid self-supporting characteristics of Filterstones made possible rapid cleaning by use of water and compressed air for backwashing. Filter units were not dismantled and there was no injury to cake supporting surfaces by excessive pressures. Filters made by **LeVal Filter Co.**, 1319A S. Michigan Ave., Chicago, Ill.

WHEN ACCURACY COUNTS SPECIFY

G-E MOLDED PLASTICS

This contactor tip support is typical of many applications for G-E molded plastics in electrical assemblies. With integral molded inserts such parts require no fabrication and eliminate expensive assembly operations. Insulation is inherent in the material and a wide range of electrical, physical and thermal properties are available in the many formulations of G-E Textolite plastics. For 60-page booklet and properties chart write SEC. 1-9

WHAT'S YOUR MIXING PROBLEM?

We want to know it—and help you solve it. Mixing problems just don't come too tough for our staff of mixing specialist engineers.

And we make the equipment to do it . . . from small laboratory stirrers to heavy industrial mixers with the wallop of a tugboat propeller, in all types and models.

So send us the specifications on the job you want done.

NEW Literature AND Catalogs

MATERIALS HANDLING—12-page illustrated catalog No. G-6 reveals information on lever hoists, load binders, utility maintenance tools, electric hoists, gear chain hoists, differential chain hoists, I-beam trolleys, and accessories—specifications and diagrams are included—issued by Coffing Hoist Co., 311 Van Buren Street, Danville, Ill.

▲ Mention Item **NED-4770** when writing ▲

MOTOR HANDBOOK—illustrated handbook "A Guide to Wartime Care of Electric Motors" provides guidance for maintenance for all types of electric motors operating on full schedules in accordance with war production needs—text is written for plant engineers and maintenance men—it may also be used in training new men for this type of service work—issued by Allis-Chalmers Mfg. Co., Milwaukee, Wis.

▲ Mention Item **NED-4771** when writing ▲

ACID PROOF PUMPS—4-page illustrated bulletin No. 702 describes characteristics of pumps with standard impeller, with explanations of types and applications of acid resisting pumping equipment—units are chemical stoneware lined and will handle all liquid corrosives except fluorides and hot alkalies—charts and specifications are included—issued by United States Stoneware Co., 60 E. 42nd Street, New York City.

▲ Mention Item **NED-4772** when writing ▲

STEEL FLOORING—4-page illustrated catalog discloses information on patterns of steel gratings and floorings—applications and tabulations of safe loads for various sizes, weights and lengths of this type of flooring is included—installations are portrayed—specifications and charts are included—issued by Kerlow Steel Flooring Co., 21 Mallory Ave., Jersey City, N. J.

▲ Mention Item **NED-4773** when writing ▲

WATERPROOFING—12-page illustrated bulletin "How To Waterproof Concrete, Stucco and Masonry" explains damage done by lack of waterproofing and various methods of waterproofing—discussed too are integral waterproofing, waterproofed cement and specifications for bonded floor finish—specifications for waterproofed stucco are included—issued by Medusa Portland Cement Co., 1000 Midland Bldg., Cleveland.

▲ Mention Item **NED-4774** when writing ▲

CLEANING MATERIALS—3 bulletins "Cleaning Metals Before Processing", "Removal Of Primers" and "Etching Aluminum Preparatory To Spot Welding" list materials available for cleaning processes—all bulletins are illustrated—contain tests, descriptions and explanations of products—issued by Turco Products Inc., Dept. 25, 6135 S. Central Ave., Los Angeles.

▲ Mention Item **NED-4775** when writing ▲

RUBBER CONSERVATION—4-page illustrated folder "If We Have To Do Without, We'll Make the Best of It" includes information on industrial wheels made with steel tires—complete specifications chart gives sizes, diameter, hub length and type—issued by French & Hecht, Inc., 777 Farnam Street, Davenport, Iowa.

▲ Mention Item **NED-4776** when writing ▲

ELECTRICAL EQUIPMENT—16-page illustrated catalog No. 18 discloses information regarding radio, television, sound, electronic and industrial uses of rheostats, resistors, tap switches, chokes and attenuators—complete tables of specifications are given—included are charts of hook-ups—issued by Ohmite Mfg. Co., 4821 Flourney Street, Chicago.

▲ Mention Item **NED-4777** when writing ▲

SCREW PRODUCTS—12-page illustrated catalog No. 5 gives information on cap screws, bolts, nuts, studs, inserts, inserting tools, extracting tools, taps, gages, stud drivers—complete explanation of Aero-thread screw thread system is included—issued by Aircraft Screw Products Co., 25-12 Forty-first Ave., Long Island City, N. Y.

▲ Mention Item **NED-4778** when writing ▲

CIRCUIT CONTROL SWITCHES—4-page illustrated bulletin 57-27 describes circuit control switches for industrial applications—switches explained are for use in signaling equipment, communication apparatus, instrument panel boards, utility lighting systems, specialized lighting equipment and aircraft circuit control systems—toggle switches include single pole, double pole—wiring diagrams of all switches and specifications of assembly parts are given—issued by General Electric Co., 570 Lexington Ave., New York City.

▲ Mention Item **NED-4779** when writing ▲

COKE OVEN HEATING—16-page illustrated booklet, "New Principles in Heating Koppers-Becker Coke Ovens", discussed fundamentals of combustion in oven flues, fuel gas pressure, pressure differential of waste gas to be overcome by injector action of fuel gas, location of orifice with respect to aspirator throat—complete diagrams and charts are added—issued by Koppers Co., Pittsburgh.

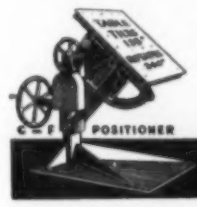
▲ Mention Item **NED-4780** when writing ▲

ANNOUNCING 2 NEW GIANT C-F POSITIONERS

Model 200 20,000 lbs. 20 inches away from table, 8 inches off center.

Model 300 30,000 lbs. 24 inches away from table, 18 inches off center.

Write for new Bulletin WP 22 "Faster, Better and More Economical Welding."



With push button control these giant C-F POSITIONERS (smaller one illustrated) rotate really large heavy and cumbersome weldments a full 360°, tilts them at any angle to 135° from horizontal (moving thru both planes at once to save valuable minutes) and hold in any position permitting strong, smooth, flawless down welding on all surfaces.

C-F Positioners comprise a complete line of pedestal mounted positioners from small (1200 lb.) hand operated models to these electrically operated giants.

DoAll SAVES TONS OF METAL

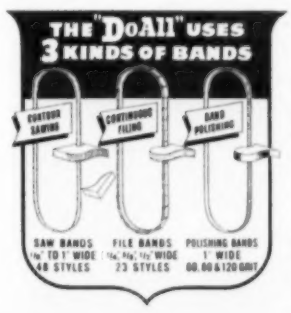
● Uncle Sam tells us that every ounce of metal saved is vital right now. DoAll saves tons and tons by slicing off any metal or alloy as clean as a whistle. Makes no difference whether it's internal or external cutting, this ultra-modern production machine follows a hairline without any waste. Uncut portions of metal or alloy are usable.

Compare DoAll's economic performance with that of shapers, millers and other machines which reduce tons of metal to chips.

FASTEST METHOD TO REMOVE METAL

In production plants everywhere, DoAll is wrecking former time schedules — doing important sawing and filing jobs in one-half, one-quarter or one-eighth former time.

A SIZE FOR EVERY JOB . . . There is a DoAll to do your particular job faster and better. Throat capacities from 16" to 60". Priced from $1000 to $5000, including motors.



Let a factory trained man come to your plant with a DoAll and prove its metal and time saving ability to you.

NEW BOOK

"DoAll on Production" shows DoAlls at work in leading plants. An interesting story told in pictures. Send for copy.

CONTINENTAL MACHINES, INC.
1314 S. Washington Avenue Minneapolis, Minn.

Associated with the DoAll Company, Des Plaines, Ill., Manufacturers of Band Saws and Band Files for DoAll Contour Machines.

Production time cut from

24 HOURS to 2 HOURS— with "HARDSTEEL" DRILL

"With a "HARDSTEEL" drill we now countersink more spring tempered steel trowel blades in two hours time than by former high speed steel countersinks in three 8-hour days — a saving of $12.10 in wages alone while the operator has 22 hours left to do other work", writes Otto Heydrich, tool maker.

You, too, can drill, countersink, counterbore and ream hardened steels, hardened parts, dies, armor plate and other materials — Rockwell "C" 40 and harder — and do it faster, better, and cheaper with "HARDSTEEL".

New shop practice is: — harden first — then drill — to avoid misalignment of holes at assembly caused by heat treat distortion.

You harden it — we'll drill it with "HARDSTEEL"

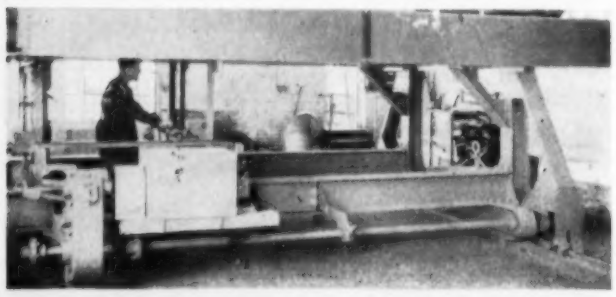
Two views of the charging system for smelting processes at the Allis-Chalmers foundry in Milwaukee, where a Fairbanks Hopper Scale is utilized for batching ingredients.



ALLIS-CHALMERS APPLIES FAIRBANKS WEIGHING TO CHARGING SYSTEM

An example of the special application of precision weighing for speeding up industrial processes and lowering production costs is the installation of a Fairbanks Hopper Scale at the Milwaukee foundry of Allis-Chalmers. The system assures faster melting and hotter iron, with less coke.

In the Allis-Chalmers charging system, a 7½-ton crane, equipped with grab bucket, loads coke and limestone into bins from which proper amounts are weighed in the Fairbanks Scale. An extra dial at the top of the coke bin registers all weights, permitting the crane operator to apportion accurately the different kinds of iron and scrap required for the day's melt.

Use your priority to speed production with Fairbanks Scales. Get the kind of weighing equipment that assures no stoppage, no breakdowns, no letdowns — **now** or later. Fairbanks, Morse & Co., 600 S. Michigan Ave., Chicago, Illinois.

New Literature—Continued

WELD INSPECTION CHART—illustrated wall chart presents different types of welds obtained when work is done normally with normal current—size and shape of bead is discussed—chart describes use of fleet-fillet technique—relation of speed and size of electrode is explained—issued by The Lincoln Electric Co., Cleveland, O.

▲ Mention Item **NED-4785** when writing ▲

WAR GASES—20-page booklet, "Warfare Chemical Hazards", discusses gas warfare from standpoint of civilian defense protective measures—effects of gases are given, as well as their characteristics and suggested first aid treatment for victims—issued by Pennsylvania Salt Co., 1000 Widner Bldg., Philadelphia.

▲ Mention Item **NED-4786** when writing ▲

STAINLESS FABRICATION—40-page illustrated catalog, "Fabrication of Stainless Steels", discloses information on proper procedure for shearing, blanking, drawing, spinning, rolling of molding sections, press and brake forming, machining, forging, soldering, silver brazing, annealing and pickling—included are descriptions of riveting, grinding, buffing, etching—issued by Republic Steel Corp., Cleveland.

▲ Mention Item **NED-4787** when writing ▲

WIRING EQUIPMENT—48-page illustrated catalog "Burndy Pocket Catalog" contains diagrams and illustrations of 75 electrical connector types with application features—wiring data and complete specifications are included—issued by Burndy Engineering Co., Inc., 107 Eastern Blvd., New York City.

▲ Mention Item **NED-4788** when writing ▲

CLEANING COMPOUND—40-page illustrated manual, "Cleaning in Aviation Industry," covers essential phases of cleaning required in aircraft production—over 35 different cleaning operations by tank immersion, steam-detergent and air-pressure-spray methods are discussed—data presented on airplane maintenance includes cleaning planes after test flights, washing plane interiors, cleaning engines, wheels and under gear, cockpits and surfaces—issued by Oakite Products, Inc., 32G Thames Street, New York City.

▲ Mention Item **NED-4789** when writing ▲

AIR COOLED ENGINES—8-page illustrated folder, "How Air-Cooled Engines Serve Industry", includes charts, diagrams and specifications of models and types—full specifications for each model included—capabilities of each are listed—issued by Wisconsin Motor Corp., Milwaukee, Wis.

▲ Mention Item **NED-4790** when writing ▲

SIGNAL SYSTEMS—4-page illustrated folder No. 70 includes complete information about type 30 and type 45 sirens—operation, adjustments, inspection, size and specifications are given—charts and cross section diagrams are included for clarity of explanation—installation and ordering information is given—issued by Foster Engineering Co., 122 Monroe St., Newark, N. J.

▲ Mention Item **NED-4791** when writing ▲

MATERIALS HANDLING—12-page illustrated bulletin No. 122 includes full information on high speed vibrator screen designed to give large capacity and efficiency through correct applications—vibration is produced by adjustable counterweight arms—screen cloth is kept drum-tight by arched transverse spring tension—bulletin explains all styles and models—issued by Robins Conveying Belt Co., 270 Passaic Ave., Passaic, N. J.

▲ Mention Item **NED-4792** when writing ▲

MACHINE & CUTTING TOOLS—20-page illustrated catalog No. 27121 gives complete specifications of line of precision machine tools, cutting tools and related products—line includes thread grinders, carbide tool grinders, cutting tools, hydraulic power units, fuel injection equipment and railroad pins and bushings—issued by Ex-Cell-O Corp., 1238 Oakman Blvd., Detroit, Mich.

▲ Mention Item **NED-4793** when writing ▲

BARREL & DRUM CARRIER—6-page illustrated folder, "Ernst", gives complete descriptions of barrel and drum carriers—explanations include special explosion-proof equipment for munition, chemical, aircraft plants and other factories where precaution against explosions and fires is necessary—diagrams reveal complete workings of unit—specifications of all models are listed—issued by Ernst Carrier Sales Co., 1456 Jefferson Ave., Buffalo, N. Y.

▲ Mention Item **NED-4794** when writing ▲

SLITTERS—REWINDERS—UNWINDERS—4-page illustrated folder "Essential War Materials" includes information on slitting, rewinding and uniform tension unwinding equipment—given in explanations are combination double winder or single winder score or shear cut slitters, drum winder with score cut slitters, drum re-winder and trimmer, and uniform tension unwinder with auto-hydraulic brakes—specifications and illustrations of models are added—issued by Johnstone Engineering & Machine Co., Washington Ave., and Green St., E. Downington, Pa.

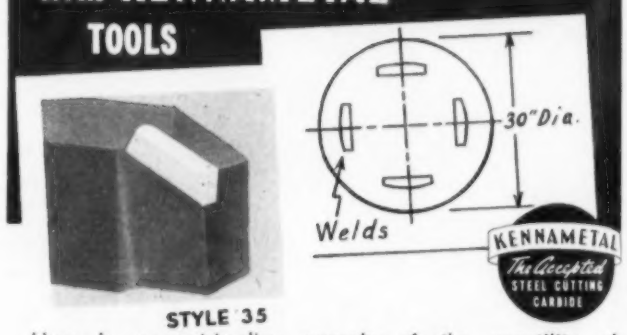
GLASS HARD WELD SPOTS Machined at 376 surface ft./min. with KENNAMETAL TOOLS



STYLE 35

Here is an outstanding example of the versatility of KENNAMETAL. Four lugs had been welded to the face of a large SAE 4160 steel casting, heat treated to 375-400 Brinell, in order to chuck it while facing one side and turning O.D. The lugs were then knocked off, leaving glass hard weld spots to be removed in the facing operation.

A 1½" square KENNAMETAL tool (Grade KM), with 35° neg. back rake and 15° pos. side rake successfully faced this work at 376 surface ft./min., with depth of cut of 1/16" and feed of 1/64". Two complete pieces were finished per tool grind.

Find how KENNAMETAL tools can speed production in your shop. Write for new 44 page pocket manual for KENNAMETAL USERS.

Save! AGAIN... AGAIN and AGAIN

with Colson Lift Jack System

SAVINGS in handling costs . . . in storage space . . . in equipment investment . . . increased safety . . . cleared aisleways and loading docks begin *at once* with Colson Lift Jacks and Platforms.

The Colson method combines the advantages of a *platform* truck and a *lift* truck in *one* system. Many platforms can be kept busy with one Colson Lift Jack. Empty platforms stack vertically and save space. Wood or metal platforms in a wide variety of styles and sizes can be used.

The savings which Colson Lift Jacks and platforms can make will pay for the equipment in a relatively short time.

Send for free booklet—The money-saving facts of Colson Lift Jacks are explained in the booklet: "Colson System of Materials Handling." Write for a copy.

SAVE TOOLS--SAVE TIME

Machine Cast Iron this *Faster* way

EASE of operation and quick flexibility of speed control adapt the Given Vari-Speed Drive to many special applications . . . for example, *machining cast iron.*

Penetrating cast iron scale, at the same high speed that the soft inner structure can be machined, quickly burns the tool point. But the GIVEN instantly reduces the work-piece to a safe penetration speed, then, with a quick spin of the handwheel, shoots the r.p.m. to a high production level. No time lost reconditioning burnt cutters, no time lost stopping and starting the machine, no belt changing! Cutters last longer, production records are broken!

Write for bulletin, recommendations, and estimates.

GIVEN MACHINERY CO.
BOX 235, VERNON STATION, LOS ANGELES

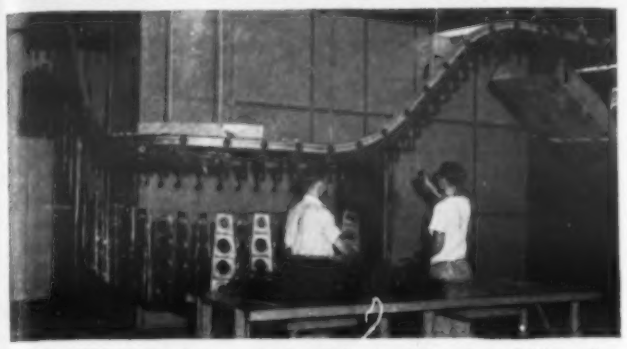
For Your Convenience in Obtaining Information on Products, Use Inquiry Blank Enclosed in This Issue.

Here's How NORTH AMERICAN AVIATION, INC.,

SPEEDS WAR PRODUCTION



THIS is another example of the flexible adaptability of the Link-Belt trolley conveyor and how it helps to speed-up production of aircraft parts.
Illustration shows conveyor dipping down to loading table where one attendant hangs a wire carrier on the empty conveyor while another hangs parts on hook of the carrier. The loaded conveyor then rises and turns to enter upper part of enclosure over dipping tank. It now descends to allow parts to pass through the tank of chromate primer, and then rises toward the ceiling. Conveyor now continues through an air-drying area and finally automatically discharges parts into trucks.
Trolley conveyors being suspended from overhead, make ceilings pay dividends and travel irregular paths at predetermined speeds to meet production requirements. Send for copy of Trolley Conveyor Book No. 1630. 8697-C

The heavy duty Rotary Truck Lift illustrated above is serving the U. S. Army at Scott Field, Illinois.

HELPING KEEP THE FLEETS IN SERVICE

Another war-time job for Rotary Truck Lifts

The War has conclusively proven that **transportation** will be a vital factor in speeding victory. KEEP YOUR FLEET "Rolling" by proper inspection and service on a **genuine Rotary** Truck Lift. Rotary pioneered the Automobile and Truck Lift and we build them today to operate on a twenty-four hour schedule, seven days a week, without service interruption even in such severe service as on a wash-rack.

Powerful, smooth operating, full-hydraulic action for safety, "deadman" valve control and such fool-proof features as the Automatic Air Bleeder make Rotary Lifts the best buy on the market today! Available in single or double plunger models, with capacities through 44,000 lbs., operated by your available compressed air or by a Rotary Electric Pumping Unit.

Also, Rotary's Oildraulic Freight Elevators, Loading Dock Elevators and Material-handling Oil-hydraulic Jacks can be of real service in your plant.

Write today for a Truck Lift catalog No. 114-T or manuals on other Rotary products. No obligation, of course. Rotary Lift Company, 1071 Kansas St., Memphis, Tenn.

Can these VINYLITE plastics' properties help you solve a problem?

In the past, "waterproof cloth" meant a fabric treated with oil, or coated with rubber, or other compound. But these coatings developed a disagreeable odor when wet, became brittle when cold, or sticky when hot. As a result, there has long been a demand for a more satisfactory waterproof cloth.

To meet this demand, the Plastics Division of Carbide and Carbon Chemicals Corporation has been carrying on an intensive research program, and there is now available a superior cloth coating based on VINYLITE resins. The properties of these resins make them especially suitable for this type of application. Unlike most plastic materials, they may be plasticized to yield tough, flexible coatings that remain pliable over a wide temperature range. They are highly resistant to water and do not crack nor become brittle upon aging. They are applied to the cloth by calendering or spreading.

The unusual properties of VINYLITE resins make them adaptable to a wide variety of durable coatings . . . for metal, paper, leather, concrete, and ceramics, as well as cloth. If you are engaged in war production, and are searching for materials with the unique combination of properties offered by VINYLITE plastics' surface coatings, we suggest that you enlist the full co-operation of our technical staff.

VINYLITE RESIN COATINGS BRING MANY IMPORTANT PROPERTIES TO YOUR PRODUCTS

WATER-RESISTANCE—In addition to their waterproof characteristics, certain coatings made with VINYLITE resins have low moisture-vapor transmission.

RESISTANCE TO HEAT AND COLD—Coatings will not become brittle or sticky under extreme climatic conditions. For example, they meet the rigid specifications for army raincoats, where coatings must neither become sticky at 180 deg. F., nor crack at zero deg. F. Others meet temperature ranges from −40 deg. F. to 250 deg. F.

TOUGHNESS—VINYLITE resin coatings are so tough that they are used to coat metal sheets *before fabrication.* Even though extended, abraded, and compressed under terrific pressures from the forming dies, the protective film remains intact.

CHEMICAL-RESISTANCE—Numerous tests, conducted in mineral acids, alkalies, corrosive chemicals, and various solvents and diluents, indicate little or no effect upon VINYLITE resins used for surface coatings.

VINYLITE RESIN COATINGS PROTECT MANY TYPES OF ESSENTIAL PRODUCTS

RAINCOATS and paulins for men and materiel are made waterproof, weatherproof, and wear-resistant.

PAPER containers, labels, and wrappers are given a non-toxic protection against water, oils, alcohol, and the majority of corrosive chemicals.

DRUMS, tanks, and other metal containers, are safeguarded against corrosion, and their contents from contamination.

CONCRETE floors, vats, and piping are protected against corrosive action of sewage and industrial wastes. Piping and vats used in food manufacture are coated to prevent contamination of the product.

FILING SAWS FOR VICTORY

FILING SAWS For VICTORY

The Foley Filer is in use by U. S. Navy for shipyards, air bases, battleships, navy tenders — by U. S. Army posts and airports—by U. S. Engineers, Light House Dept., Treasury, Mint, N. Y. A., W. P. A.—also hundreds of Defense projects and industrial plants.

ONE MACHINE Files All Saws

The Foley Filer is the only machine that sharpens cross-cut circular saws 3" to 24" in diameter, band saws ⅛" to 4½" wide — all hand saws. The Foley also cuts down filing time, saves on files and reduces saw breakage.

FOLEY AUTOMATIC SAW FILER

Your saws will cut faster and truer and stay sharp longer when filed on a Foley Saw Filer. The exclusive patented Foley jointing principle straightens up uneven teeth and makes them perfect in size, shape, spacing. That is why Foley-filed saws increase sawing production 25% to 40%.

THOUSANDS IN USE. The Foley Saw Filer has proven its value and quality by many years of use on thousands of machines in service. Write direct to us for literature and prices.

FOLEY MFG. CO., 23 Main St. N. E., Minneapolis, Minn.

PENCIL LINES PRINT STRONG AND SHARP

You'll be able to see—and appreciate—the unbroken density of your hard pencil line. The new surface "takes" the hard pencil so completely black that light "sparkles" do not get thru the line to mar the print. That means clean blue-prints . . . blue-prints with razor-sharp definition from pencil drawings. This ocular proof of Pencil-TEX superiority explains why progressive draftsmen are using Pencil-TEX, by preference, for better results with pencil speed. And the price of Pencil-TEX is so "right", compared to increased speed, increased production capacity and increased satisfaction, it writes itself off in what you gain. Remember, Pencil-TEX is available for immediate delivery, with Priority of A2 or better, in 20 yard rolls of 30, 36 and 42 in. widths. FREE: Send for sample work sheets of Pencil-TEX—try it at our expense.

It's Easier To Do
GOOD SOLDERING & TINNING
WITH THESE
Special Soldering Fluxes

You will find it easier to do good soldering and tinning with RUBYFLUID Soldering Products. It offers many working advantages.

FOR STAINLESS STEEL—Use Ruby's Stainless Steel Flux, perfected for this metal. Eliminates many of the problems that formerly arose from attempts to join stainless steel. No special equipment or excessive heat required. Discoloration is eliminated. Used and recommended by stainless steel producers.

FOR GENERAL SOLDERING and TINNING—Use Rubyfluid Flux or Paste. It wets out freely and properly conditions the metals so that a strong, neat union is possible without fuss or bother. Rubyfluid is easy and pleasant to use. There are no objectionable or dangerous fumes.

Try these quality soldering products—they're proven best by test. Enjoy the advantages they offer. Order from your supplier or direct from—

Something *really NEW* in Surface Grinders!

Never before has there been a surface grinder of this type and quality offered at so low a price. It is husky, accurate, versatile, easy to operate, portable—and incorporates many advantages not found in machines costing many times as much. It is ideal for surface grinding, tool sharpening and any grinding operations within its range. It has many superior features which include:

Improved, well-designed spindle—the "heart" of any Surface Grinder—made extra-long with bearing at either end, widely spaced.

Special Wheel Mounting System—utilizes two-piece adapter so that either wheel, or wheel and adapter, can be removed.

Improved Table—has long ways so that table never "hangs" over end of machine.

Specially Designed Column—of one-piece construction, cast of high-tensile iron. Entire column, together with bracket can be rotated 360°.

SPECIFICATIONS

Maximum length that can be ground — 13½"; maximum width that can be ground—6"; maximum space under 7" wheel to table—9½"; maximum space under 7" wheel to B & S No. 510 Magnetic chuck—6"; table surface 5¾" x 12".

NEW AIR RAID SIRENS USE FAIRBANKS-MORSE MOTORS EXCLUSIVELY

Air raid sirens must have the ability to stand up under all sorts of weather conditions—**extreme heat**, extreme cold, rain, snow, and hail. The electric motor used to operate each siren must possess this same ability to "take it" day in and day out.

In selecting siren motors for the Tri-Tone unit (illustrated), The Hitz Laboratories of Ridgefield Park, N. J. concluded that the Fairbanks-Morse Motor with its moisture-proof insulation, Copperspun Rotor, and enclosed cartridge-type ball bearings which **require only once-a-year lubrication,** was particularly adaptable.

The Tri-Tone air raid siren is a three-tone unit that produces two definite, sustained, unmatched sounds which combine to create a third tone. Resonant horns are attached to each of the siren units. Attached to the Fairbanks-Morse Motor is a convenient hoisting ring.

Because they are precision built to rigid specifications, F-M Motors adequately meet a wide variety of industrial and commercial needs without being "babied"! They can be started, stopped, and reversed at will. No stoppage . . . no breakdowns . . . no letdowns — **now** or later!

Buy good products now for use after the war! Use your priority to buy Fairbanks-Morse Motors . . . to insure against interruptions and to speed production. Fairbanks, Morse & Co., 600 S. Michigan Ave., Chicago, Illinois.

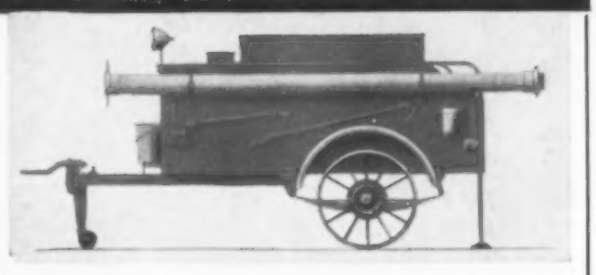
WHEELS for FIRE PUMP TRAILERS



SUITED TO MANY OTHER TYPES OF CONVEYANCES AND PORTABLE EQUIPMENT SUCH AS

AIRPORT EQUIPMENT • GENERATOR SETS • PORTABLE COMPRESSORS • PORTABLE WELDERS • ETC., ETC.

● Builders of the new home defense fire fighting Pump Trailers will find French & Hecht Tension-Bilt Steel Wheels ideally suited to their needs. They comply with government specifications—are complete with removable Hub, Brake Drum, Timken Type Bearings and Hub Cap—and are interchangeable with Pneumatic Type Wheel.

Being Tension-Bilt with spokes hot forged into hub and rim with scientifically predetermined tension, these wheels are lighter yet stronger, round and true, and amazingly resistant to the shocks of hard usage. Tension-Bilt wheels, the most widely used in agriculture, have proven their outstanding worth under the most trying conditions through many years.

Write TODAY for Complete Information.

WANT PROMPT DELIVERY? GET SIGHT FEED A-C WELDERS!

The shift to A-C welding in armament work is pronounced.

And in war production times, you can bet there is a reason for it.

One reason is the fact that A-C does away with magnetic arc blow, which assures sound welds. Another is lower costs because of larger electrodes and higher currents being feasible to use.

Step Ahead of the Field with Sight Feed!

Take advantage of A-C welding's economy, speed, sound welds and low cost operation with Sight Feed A-C Welders. With 12 models Sight Feed offers you the exact machine to take care of your requirements.

Learn what A-C welding and Sight Feed Welders can do for you by writing for complete literature today. Be sure to ask for the article on A-C Progress.

How Small Quantity Runs can be held without fixtures

Where runs are too small to warrant making jigs and fixtures, today's production demands are for Knu-Vise Toggle Clamps and Quick-Action Pliers.

Illustrated here is a case where production was carried on without loss of time; no necessity to wait for fixtures. The two large C-Clamps served as temporary fixtures while the large throated pliers held the work in place during drilling operations.

C-Clamps are available in 5", 6", and 10" sizes, and lend themselves to a range of 15 to 20 different setups. The pliers have 3", 4", and 6" throats.

Let us help you with your clamping problems

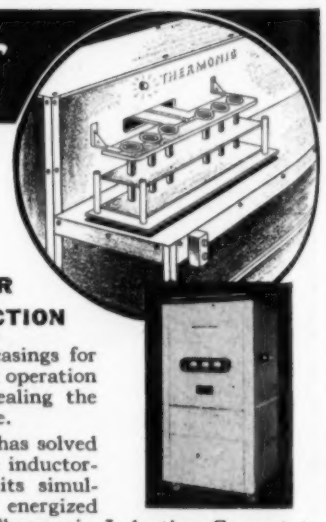
Thermonic



6 IN 30 SECONDS
720 IN ONE HOUR
17,280 IN ONE DAY

NO MATTER HOW IT'S SAID, IT TOPS IN BURSTER CASING BRAZING PRODUCTION

In the fabrication of burster casings for chemical shells, a silver-brazing operation is necessary in joining and sealing the screw-machine part to the tube.

Thermonic Induction Heating has solved this problem by using a single inductor-type coil which heats six units simultaneously in 30 seconds when energized from a 20 kw. Model 1070 Thermonic Induction Generator. The equipment consists of a two-coil setup alternately energized, and permitting one coil to be emptied and reloaded while the other coil is brazing.

By using frequencies of the order of 400,000 cycles per second, a high energy transfer between coil and work is obtainable, and the resultant heat pattern permits the brazing alloy to flow and form a strong, gas-tight joint.

Again Thermonic has come to the fore in speeding production of materials vital to our armed forces.

A series of Data Sheets completely covering the subject of Induction Heating will be issued monthly. Nos. 1, 2 and 3 are ready for you. Write to Department G.

VARIABLE SPEED CONTROL

Variable speed control of V-belt driven equipment up to a maximum 3 to 1 ratio is provided by this single lever controlled unit. Mechanically simple in design and sturdily constructed to withstand hardest service, models 1A and 2A Toledo variable speed controls have numerous unique features . . . including: plain, smooth pulley, eliminating noise and vibration; stepless speed variation up to full 3 to 1 ratio; minimum pulley diameters are increased to transmit greater H.P. over entire range; new pulley design providing cylindrical bottom for V-belts which fixes minimum pitch diameters, preventing damage to belts and giving increased torque; single arm support, for easy belt application; large shaft, oilite bearings and lubricant reservoir; sector plate serving as dial indicator and additional locking medium; unusually attractive prices.

Wheel assemblies can also be purchased without mountings for application on machines . . . providing built-in speed control.

If you have a variable speed control problem, either on plant equipment or on machinery you build for sale, investigate the Toledo variable speed control . . . you'll be interested in its efficiency and low price. **The Toledo Timer Co.,** 2224 Albion St., Toledo, O. —Advt.

Weber Engine Company uses Bantam Quill Bearings in crankshaft of its Type F Vertical Gas Engine—reports excellent results in hundreds of applications.

Combining the advantages of anti-friction construction with high load capacity, small size, and ease of installation, Bantam Quill Bearings are ideally suited for use in the crankshafts of internal combustion engines and similar applications. Simple, effective system of lubrication reduces the need for maintenance attention. For further details on this compact anti-friction bearing, write for Bulletin Z-104.

9 Features of Bantam's Quill Bearing

1. High radial load capacity in limited area.
2. Rollers and races accurately ground and hardened.
3. Design is simple — there are no fragile parts.
4. Flanges of outer race are ground on inside face.
5. Easy to lubricate.
6. Easy to install.
7. Curvilinear trunnions for greater strength.
8. One piece outer race —rollers are self-retained.
9. Roller length is correctly proportioned to roller diameter.

Next to the Stars and Stripes . . .

AS PROUD A FLAG AS INDUSTRY CAN FLY

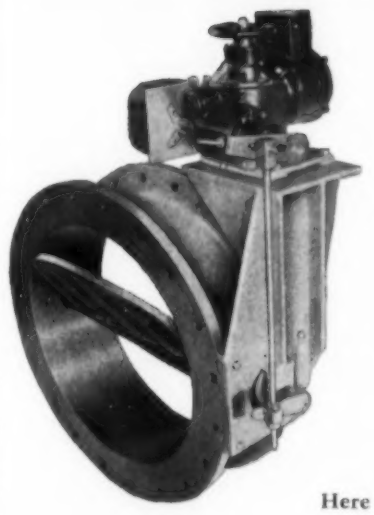
Signifying 90 percent or More Employee Participation in the Pay-Roll Savings Plan

IT doesn't go into the smoke of battle, but wherever you see this flag you know that it spells Victory for our boys on the fighting fronts. To everyone, it means that the firm which flies it has attained 90 percent or more employee participation in the Pay-Roll Savings Plan . . that their employees are turning a part of their earnings into U. S. Savings Bonds *regularly*, every pay day, with the goal being 10 percent of the gross pay roll allotted to Bonds. You don't need to be engaged in war production activity to fly this flag. Any patriotic firm can qualify. For facts about the Pay-Roll Savings Plan, write Treasury Department, Section D, 709 12th Street, NW., Washington, D. C.

MAKE EVERY PAY DAY "BOND DAY"

U. S. WAR Bonds ★ Stamps

automatic!



Electric Motor Operated
•
Positive Control of Volume and Pressure
•
Wedge-Tight Shut-Off

Here is a simplified, precise and entirely automatic valve for the wedge-tight shut-off and control of liquids and gases in power plants, water works, chemical industries and refineries. 24", 15-lb. American Standard with hand wheel for manual operation in case of current failure. Available in 125-lb. iron, 150- and 300-lb. steel in sizes to 84".

Six Hand Wheel Revolutions Complete Full Vane Movement

Six revolutions of the hand wheel fully open or close this 125-lb. R-S Butterfly Valve. Compare this quick action with ordinary valves, some of which require as long a time as five minutes for complete opening or closing.

Comparatively light in weight, R-S Butterfly Valves effect considerable savings in installations costs since less space and supporting structure are required. Remember, too, that the vane closes naturally against the body of the valve and at the correct angle for the wedge-tight shut-off of any material that flows or is forced through a pipe.

For information concerning this and other modern Butterfly Valves, write R-S Products Corporation, 4527 Germantown Avenue, Philadelphia, Pa. Ask for Catalog No. 10-B.

HOW TO SPEED UP with SPEED REDUCERS

● The use of Saco Speed Reducers in adapting any available motors to production machines is another way to *speed up output.* Prompt delivery for war requirements can be made on most sizes. They offer a range of reduction ratios from 10-to-1 up to 60-to-1.

SACO
Speed Reducers

Double Reduction—First reduction through V-belt sheaves, can be changed for different ratios, and second internal reduction (10:1) through steel helical gears . . . Mount any standard type motor... Less floor space and less supporting structure required; adjustable hinged base mounts motor on top.

The GROVE Pneumatic Gauge COMPARATOR

GROVE SIMPLICITY ACCURACY SAFETY

The Portable Method of Checking All Types Of Pressure Gauges

- Compact, portable and fully self-contained.
- Built-in high capacity rechargeable air cylinders.
- Precision laboratory test gauges accurate to within ¼ of 1% full scale.
- Completely equipped with tubing, connections and accessories.

Figure the amount of time, trouble and money you save when you check your pressure gauges "in-place" without removing them from their panels or mountings; without disturbing existing line connections. The portable Grove Pneumatic Gauge Comparator gives you this fast accurate means of accurately checking any service gauge in service. Write today for Bulletin 300.

CLEAN UP A DAY'S WORK EVERY HOUR

WITH HYPRESSURE JENNY STEAM CLEANER

Because one man with a Hypressure Jenny Steam Cleaner can work 8 to 10 times faster than by old fashioned hand methods, a day's cleaning work can be completed in *one hour or less!* Thus in production and maintenance cleaning, vital man and machine hours are saved for all-important war production. You save money, too! Hypressure Jenny users report up to 40% reduction in machine-repair payrolls, 85% lower floor cleaning costs, savings of $14 per 1000 sq. ft. of plant windows cleaned. Savings usually pay for the machine the first year or sooner. Send for a free survey to find out how much Hypressure Jenny can save you.

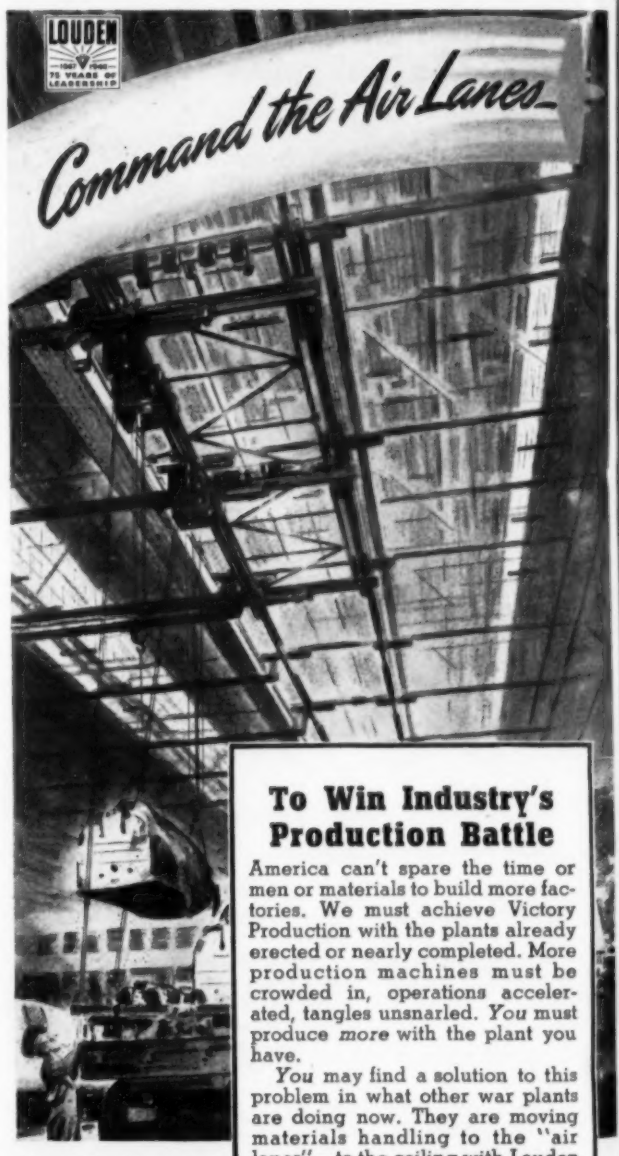
LOUDEN 75 YEARS OF LEADERSHIP



To Win Industry's Production Battle

America can't spare the time or men or materials to build more factories. We must achieve Victory Production with the plants already erected or nearly completed. More production machines must be crowded in, operations accelerated, tangles unsnarled. *You* must produce *more* with the plant you have.

You may find a solution to this problem in what other war plants are doing now. They are moving materials handling to the "air lanes"—to the ceiling with Louden Monorail and Overhead Cranes . . . getting handling out of the way of production, uncovering urgently needed floor space, enabling operators to work with greater ease *and speed,* accelerating the handling of materials and products from receiving room to shipping platform . . . and releasing men from *handling* jobs for absorption into *production* jobs.

Louden . . . the pioneer, universally used overhead handling equipment . . . meets *any* need, handles anything from 10 pounds to 10 tons. Doubled plant capacity permits unusually prompt delivery on many items. What is *your* materials handling problem? Come to Louden for a solution. Write or wire TODAY. The Louden Machinery Company, 549 S. Superior Ave., Fairfield, Iowa.

Steps Up Any Plant's Output

Provides additional production space, time and labor economies. Electric hoists on traveling cranes, cab-operated motor-driven crane hoists, etc., etc., permit wide range of handling over one universal system.

ASSEMBLES, BROACHES, STRAIGHTENS, BENDS

The high versatility of this Denison HydrOILic Press, the DLOS2, makes it quickly adaptable for assembling or straightening, bending or broaching—with equal accuracy on either small-lot or production-line work. Built in 50-ton capacity, its tonnage is adjustable from approximately 10% to full capacity. The press is equipped for either manual or electric control.

Like other HydrOILic presses in Denison's standard line, the DLOS2 is giving production men in all industries fast, efficient accuracy. You can get more effective POWER, SPEED and CONTROL for many an operation in your production setup with HydrOILics. You'll find full details and specifications of the DLOS2 press in our Bulletin 109. Write for it today, mentioning the tonnage you desire. The Denison Engineering Company, 1151 Dublin Road, Columbus, Ohio.

NO Jar NO Bump NO Jolt

with

Interior view of crane-cab at eastern railroad pier, showing compact EC&M Master Switches conveniently grouped within easy reach of the operator.

EC&M FREQUENCY RELAY CONTROL

You, too, can make a "cushioned landing" with this new EC&M Frequency Relay Control. It permits *weaker values of torque* so essential to smooth and slow lowering of light and intermediate loads, safeguards against speeding in lowering heavy loads—*enables operator to achieve results previously impossible—on A-c Motor-Hoists.*

Management and engineers have "raised their sights" for crane performance since seeing this outstanding EC&M control operate. Its extreme accuracy of operation and characteristic EC&M dependability give greater value in crane operation. Ask for Booklet No. 930.

UNBRAKO Reg. U. S. Pat. Off.

KNURLED SOCKET HEAD CAP SCREWS

NON SKID!

Just as the tread on a tire grips the slippery road, so does the *knurling* on the heads of "Unbrako" Cap Screws prevent the fingers from slipping. This non-slip grip saves TIME, speeds the job and permits the screw to be *locked* after it is countersunk. Complete range of sizes, from No. 4 to 1½" diameter at no extra cost. Write for the "Unbrako" Catalog today.

Knurling of Socket Screws originated with "Unbrako" years ago

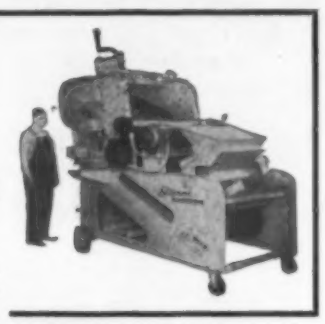
PULLEY SEPARATORS pay for THEMSELVES



"Does in SIX HOURS what formerly took 3 DAYS . . . ."
"Replaces FIVE old Separators . . . ."

These are facts from actual users that prove Stearns Magnetic Separators definitely profitable investments. . . . Conservation of metal is a "must" these days but to do it economically, automatically, smoothly on such jobs as reclaiming brass, aluminum and other secondary metals from borings, chips and metal refuse requires well designed, well built Stearns Magnetic separating equipment.

If you are interested in increasing the value of your scrap metal write for this Bulletin 302. No obligation. Investigate Stearns Magnetic methods and save money.
